## F5 BIG-IP Administration Data Plane Configuration Sample Questions (Q31-Q36):

### NEW QUESTION # 31

Which type of Virtual Server requires the use of a FastL4 profile?

- A. Performance (HTTP)
- B. Performance (Layer 4)

- C. Stateless
- D. Standard

**Answer: B**

Explanation:

Performance (Layer 4) virtual servers rely on FastL4 profiles for high-speed Layer 4 traffic handling.

#### NEW QUESTION # 32

During a high-demand event, the BIG-IP Administrator needs to limit the number of new connections per second to a Virtual Server. What should be applied?

- A. OneConnect profile
- **B. Connection Rate Limit**
- C. Connection Limit
- D. HTTP Compression profile

**Answer: B**

Explanation:

Connection rate limits restrict how many new connections are accepted per second, protecting application resources.

#### NEW QUESTION # 33

All pool members are online. All other virtual server settings are at default. What might alter the load balancing behavior? (Choose one answer)

- A. Adding a OneConnect profile
- **B. Adding a persistence profile**
- C. Enabling SNAT automap
- D. Enabling a fallback host in the HTTP profile

**Answer: B**

Explanation:

By default, BIG-IP load balancing algorithms (such as Round Robin) distribute connections evenly across all available pool members. However, persistence profiles override normal load balancing decisions by forcing subsequent connections from a client to be sent to the same pool member.

According to the BIG-IP Administration: Data Plane Configuration documentation:

Persistence creates a client-to-server mapping that is honored before load balancing algorithms are applied.

When persistence is enabled, BIG-IP may repeatedly select the same pool member even if others are available.

This directly alters load balancing behavior.

Why the other options are incorrect:

A . Adding a OneConnect profile

OneConnect optimizes server-side TCP connections but does not change which pool member is selected.

B . Enabling SNAT automap

SNAT affects source address translation, not pool member selection.

C . Enabling a fallback host in the HTTP profile

A fallback host is only used when no pool members are available.

Correct Resolution:

Adding a persistence profile alters load balancing behavior by maintaining client affinity to a specific pool member.

#### NEW QUESTION # 34

Users are unable to reach an application. The Virtual Server shows a red diamond status. What is the cause?

- A. HTTPS traffic sent to HTTP VS
- B. Virtual Server disabled
- C. Pool members disabled

- **D. All pool members are down**

**Answer: D**

Explanation:

A red diamond indicates that the Virtual Server is enabled but unavailable, typically due to all pool members being down.

#### NEW QUESTION # 35

A BIG-IP Administrator adds new pool members into a highly utilized pool. Users report application failures. Which pool-level setting should be checked?

- A. Allow SNAT
- B. Availability Requirement
- **C. Slow Ramp Time**
- D. Action On Service Down

**Answer: C**

Explanation:

Slow Ramp Time prevents new pool members from receiving full traffic immediately, avoiding overload.

#### NEW QUESTION # 36
