SAP Certified Associate - Security Administrator 認定 C_SEC_2405 試験問題 (Q15-Q20):

質問 # 15

Which of the following is part of the SAP S/4HANA central UI component?

- A. SAP Fiori analytical application
- **B. SAP Fiori launchpad**
- C. SAP Fiori transactional application
- D. SAP Fiori object page

正解: B

解説:

The SAP Fiori launchpad is the central UI component in SAP S/4HANA, serving as the primary entry point for users to access Fiori applications. It provides a unified, role-based interface where users can navigate to transactional, analytical, or object page applications via tiles organized in catalogs and spaces. The launchpad integrates with the SAP Fiori infrastructure, ensuring consistent user experience and secure access to applications. SAP Fiori object pages, transactional applications, and analytical applications are specific types of Fiori apps accessed through the launchpad, not central UI components themselves. The launchpad's role as the central hub supports personalized navigation, single sign-on, and application management, making it a cornerstone of the S/4HANA user interface. By centralizing access, the Fiori launchpad enhances usability and security, ensuring that users only interact with applications authorized by their roles, aligning with SAP's modern, user-centric design philosophy for enterprise systems.

質問 # 16

What can be assigned directly to a user when using the SAP Launchpad service in SAP BTP?

- **A. Role collections**
- B. Spaces
- C. Catalogs
- D. Launchpad roles

正解: A

解説:

In the SAP Launchpad service within SAP Business Technology Platform (BTP), Role collections can be assigned directly to a user. Role collections are groups of roles that define access to specific applications, services, or functionalities within the Launchpad, allowing administrators to grant users the necessary permissions to access content, such as Fiori apps or custom applications. By assigning role collections directly to users in the SAP BTP subaccount, administrators ensure that users have the appropriate access rights tailored to their responsibilities. Spaces, which organize apps in the Launchpad, and Catalogs, which group apps and tiles, are assigned to roles or role collections, not directly to users. Launchpad roles are not a distinct entity in SAP BTP; roles are part of role

collections. This direct assignment of role collections simplifies access management, ensuring secure and efficient user access to the SAP Launchpad service while aligning with SAP BTP's security and authorization framework.

質問 # 17

Under which of the following conditions can you merge authorizations for the same object during role maintenance? Note: There are 2 correct answers to this question.

- A. The activation status and the maintenance status of the authorizations must match.
- B. The activation status and the maintenance status of the authorizations must NOT match.
- C. The activation status of a manual authorization must match the status of the changed authorizations.
- D. The maintenance status of the changed authorizations must match the status of a manual authorization.

正解: A、C

解説:

* Context: Merging authorizations in SAP role maintenance ensures that multiple authorizations for the same object are harmonized.

* Solution Descriptions:

* B: Matching activation and maintenance statuses ensures consistent merging.

* D: Manual authorizations can be merged only if their activation status matches the changed authorizations.

質問 # 18

When you maintain authorizations for SAPUI5 Fiori apps, which of the following object types is the front-end authorization object type?

- A. TADIR G4BA-SAP Gateway Odata V4 Backend Service Group & Assignments
- B. TADIR IWSG - SAP Gateway: Service Groups Metadata
- C. TADIR IWSV - SAP Gateway Business Suite Enablement-Service
- D. TADIR INA1 InA Service

正解: C

質問 # 19

What are some disadvantages of a Composite Role? Note: There are 2 correct answers to this question.

- A. Changes to the authorizations can only be made using the included roles.
- B. Transactions that are deleted from the Composite Role menu are also removed from the included roles.
- C. Menus from the included roles cannot be mixed.
- D. Changes to the included roles are not immediately visible in the composite role menu, requiring a renewed import.

正解: A、D

解説:

Composite roles in SAP systems group multiple single roles to simplify user assignment, but they have notable disadvantages. One disadvantage is that changes to the included single roles, such as adding or removing transactions, are not immediately visible in the composite role's menu, requiring a renewed import to update the composite role's structure. This delay can lead to inconsistencies during role maintenance, complicating administration. Another disadvantage is that changes to authorizations within a composite role can only be made through the included single roles, as composite roles do not allow direct authorization maintenance. This restriction limits flexibility and requires administrators to modify each single role individually, increasing effort and potential for errors. Menus from included roles can be mixed in the composite role, making option B incorrect, and deleting transactions from the composite role menu does not affect the included roles, ruling out option D. These limitations highlight the need for careful planning when using composite roles to ensure efficient and secure role management.
