What's more, part of that ExamcollectionPass 3V0-21.23 dumps now are free: <https://drive.google.com/open?id=1SkemZL5378a3vKnKLhINykZfAmKt0fFQ>

We respect the private information of our customers. If you buy the 3V0-21.23 exam materials from us, your personal information will be protected well. Once the payment is finished, we will not look at the information of you, and we also won't send the junk mail to your email address. What's more, we offer you a free update for 365 days for 3V0-21.23 Exam Dumps, so that you can get the recent information for the exam. The latest version will be automatically sent to you by our system, if you have any other questions, just contact us.

Our VMware vSphere 8.x Advanced Design (3V0-21.23) PDF format is user-friendly and accessible on any smart device, allowing applicants to study from anywhere at any time. We have included actual and updated VMware 3V0-21.23 questions in this VMware vSphere 8.x Advanced Design (3V0-21.23) Dumps PDF file. Our VMware vSphere 8.x Advanced Design (3V0-21.23) exam dumps PDF format is designed to help individuals acquire the knowledge necessary to succeed in the test.

Training 3V0-21.23 Tools | Test 3V0-21.23 Simulator

With the assist of VMware practice demo, your goals to get the 3V0-21.23 certification will be very easy to accomplish and 100% guaranteed. Before you choose our 3V0-21.23 study material, you can try our 3V0-21.23 free demo for assessment. For a better idea you can also read 3V0-21.23 testimonials from our previous customers at the bottom of our product page to judge the validity. Our updated and useful 3V0-21.23 will be the best tool for your success.

VMware 3V0-21.23 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers differentiating between business and technical requirements, as well as conceptual, logical, and physical design. A key skill measured is "Designing System Availability."
Topic 2	<ul style="list-style-type: none"> VMware Products and Solutions: Targeting VMware Engineers, this section describes VMware Cloud Foundation architecture, its components like vSphere and NSX, benefits such as automation and scalability, and use cases like hybrid cloud environments. It assesses understanding of VMware Validated Solutions.
Topic 3	<ul style="list-style-type: none"> Plan and Design the VMware Solution: This part targets Solution Designers, evaluating their ability to gather business objectives, create conceptual models based on these objectives, develop logical designs, and translate them into physical designs that meet specific requirements like manageability or security.

VMware vSphere 8.x Advanced Design Sample Questions (Q49-Q54):

NEW QUESTION # 49

An architect is responsible for designing a vSphere-based solution for a customer. The customer has the following requirements: The solution must provide redundancy and load balancing for storage traffic The solution must tolerate at least one failure There must be no single point of failure in the solution Which three considerations regarding physical host design should the architect analyze when making storage related design decisions? (Choose three.)

- A. Use four single port storage host bus adapters (HBAs) in each ESXi host
- B. Use one quad-port storage host bus adapter (HBA) in each ESXi host
- C. Configure a minimum of four paths to every LUN or datastore
- D. Use an active-active array for Fibre Channel storage-based VMFS datastores
- E. Configure a minimum of two paths to every LUN or datastore
- F. Configure the fixed multi-pathing policy on the ESXi hosts

Answer: C,D,E

Explanation:

Use an active-active array for Fibre Channel storage-based VMFS datastores An active-active array provides redundancy and load balancing by allowing multiple paths to be active at the same time, ensuring better performance and fault tolerance. This supports the requirement for redundancy and no single point of failure by ensuring that storage traffic can be distributed across multiple paths to different storage controllers.

Configure a minimum of two paths to every LUN or datastore

Having multiple paths to every LUN or datastore is essential for ensuring redundancy in the storage path. In case one path fails, the system can continue to function by using the other path, meeting the requirement for tolerance to at least one failure.

Configure a minimum of four paths to every LUN or datastore

Configuring four paths further increases redundancy, ensuring that the storage system can tolerate multiple path failures while still maintaining access to the LUN or datastore. This improves load balancing and provides greater fault tolerance.

NEW QUESTION # 50

An architect is designing a new vSphere architecture and notes the following information during the design workshops:

vSphere distributed switches (VDS) will be used for all vSphere clusters. Switch naming will be based on cluster name, resource type function and switch number.

Port group naming will be based on function, role and VLAN number range.

Each host has two physical network cards each with two NIC ports:

- Card A aligns to vmnic0 and vmnic1

- Card B aligns to vmnic2 and vmnic3

The architecture must provide resilient network connections.

Management Services will use VLAN ID 43.

Virtual machines access VLAN ID 100.

The vSphere infrastructure will use a hyper-converged storage architecture.

How should the architect document the VDS physical design based on the noted information?

- A. vSwitch Prod_DVS_01 will have 4 uplinks
Port group name "pg_mgmt"
 - uplink = vmnic0, vmnic2
 - teaming policy = active/passivePort group name "pg_VM"
 - uplink = vmnic1, vmnic3
 - teaming policy = active/passive
- B. vSwitch Prod_DVS_01 will have 4 uplinks
Port group name "pg_mgmt_43"
 - uplink = vmnic0, vmnic2
 - teaming policy = active/passivePort group name "pg_VM_100"
 - uplink = vmnic1, vmnic3
 - teaming policy = active/passive
- C. vSwitch Prod_DVS_01 will have 2 uplinks
Port group name "pg_mgmt_43"
 - uplink = vmnic0
 - teaming policy = active/passivePort group name "pg_VM_100"
 - uplink = vmnic1
 - teaming policy = active/passive
- D. vSwitch Prod_DVS_01 will have 4 uplinks
Port group name "pg_mgmt_43"
 - uplink = vmnic0, vmnic1
 - teaming policy = active/passivePort group name "pg_VM_100"
 - uplink = vmnic2, vmnic3
 - teaming policy = active/passive

Answer: B

NEW QUESTION # 51

Which two statements are true about gathering functional business and application requirements- (Choose two.)

- A. It focuses on functional requirements with C-level stakeholders
- B. It leverages a single set of questions for all stakeholders
- C. It is a non-iterative process
- D. It might require multiple rounds of stakeholder interviews
- E. It builds stakeholder consensus

Answer: D,E

Explanation:

You interview stakeholders and conduct workshops to gather requirements and build consensus.

Gathering requirements is an iterative process, which might require multiple rounds of interviews.

Asking the right questions is vital, and you must gather both functional and nonfunctional requirements.

A good strategy for a successful project is to bring the correct people together and build consensus.

NEW QUESTION # 52

Following a recent acquisition, an architect needs to merge IT assets into its current data center. The combined vSphere environment will need to run the newly acquired company's virtual machines.

Network integration work has already been completed and the current environment has capacity to host all virtual machines. The

Operations team needs to identify which virtual machines belong to the acquired company and report on their usage. How should the architect merge the company's assets and virtual machines?

- A. Lift and shift the acquired assets into the data center
- B. Leave the newly acquired company's assets in its current place
- C. Migrate the acquired company's virtual machines into the existing vSphere environment
- **D. Migrate and apply vSphere tags to the acquired company's virtual machines**

Answer: D

NEW QUESTION # 53

An architect is designing a vSphere environment for a customer based on the following information:

- The vSphere cluster will have three hosts only due to budget considerations.
- A database cluster (node majority) consisting of three virtual machines will be running on the vSphere cluster.

Which two recommendations can the architect make so that the customer achieves the highest level of application availability while taking into consideration operational resiliency? (Choose two.)

- A. Create VM-Host anti-affinity rules
- **B. Set `das.respectvmxantiAffinityRules` to false**
- **C. Create VM-VM anti-affinity rules**
- D. Disable vSphere HA during maintenance
- E. Set `das.ignoreInsufficientHbDatastore` to true

Answer: B,C

NEW QUESTION # 54

.....

This version of the practice exam is suitable for individuals who are comfortable in practicing for the exam online. This software contains all the features we have discussed above in the paragraph of the desktop version. ExamcollectionPass online practice test frees you from hassles of installing software and plugins. You can use this format of the VMware 3V0-21.23 Mock Exam on any operating system, and it is accessible via these browsers: Opera, Safari, Chrome, Firefox, MS Edge, and Internet Explorer.
