

# Free updates PECB ISO-IEC-27002-Foundation Exam questions by Prep4SureReview

In order to make your exam easier for every candidate, our ISO-IEC-27002-Foundation exam prep is capable of making you test history and review performance, and then you can find your obstacles and overcome them. In addition, once you have used this type of ISO-IEC-27002-Foundation exam question online for one time, next time you can practice in an offline environment. The ISO-IEC-27002-Foundation test torrent also offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. Therefore, for your convenience, more choices are provided for you, we are pleased to suggest you to choose our ISO-IEC-27002-Foundation Exam Question for your exam.

## PECB ISO-IEC-27002-Foundation Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"> <li>• Interpret the ISO</li> <li>• IEC 27002 organizational, people, physical, and technological controls in the specific context of an organization: This domain covers the four control categories defined in ISO</li> <li>• IEC 27002 organizational, people, physical, and technological and how each applies to real-world organizational environments. It requires understanding how to read, interpret, and contextualize these controls based on an organization's specific needs, risks, and operating conditions.</li> </ul> |
| Topic 2 | <ul style="list-style-type: none"> <li>• Explain the fundamental concepts of information security, cybersecurity, and privacy based on ISO</li> <li>• IEC 27002: This domain covers the core principles and definitions that underpin information security, including the concepts of confidentiality, integrity, and availability. It focuses on how ISO</li> <li>• IEC 27002 frames cybersecurity and privacy as foundational elements of an organization's overall security posture.</li> </ul>  |
| Topic 3 | <ul style="list-style-type: none"> <li>• Discuss the relationship between ISO</li> <li>• IEC 27001, ISO</li> <li>• IEC 27002, and other standards and regulatory frameworks: This domain examines how ISO</li> <li>• IEC 27002 functions as a code of practice that supports the requirements set out in ISO</li> <li>• IEC 27001, and how both standards interact with other relevant frameworks. It also addresses how organizations align these standards with applicable laws, regulations, and industry-specific requirements.</li> </ul>                            |

ISO-IEC-27002-Foundation Visual Cert Exam, Premium ISO-IEC-27002-

## Foundation Exam

The ISO/IEC 27002 Foundation Exam has become very significant to validate expertise and level up career. Success in the ISO/IEC 27002 Foundation Exam exam helps you meet the ever-changing dynamics of the tech industry. latest ISO/IEC 27002 Foundation Exam ISO-IEC-27002-Foundation Exam Cram Pdf, collection pdf and exam dumps have been provided in Prep4SureReview. With 365 days updates.

### PECB ISO/IEC 27002 Foundation Exam Sample Questions (Q13-Q18):

#### NEW QUESTION # 13

Which of the following controls aims to protect the production environment and data?

- **A. Control 8.31 Separation of development, testing and operational environments**
- B. Control 5.13 Labelling of information
- C. Control 6.6 Confidentiality or non-disclosure agreements

**Answer: A**

Explanation:

Control 8.31, Separation of development, testing and operational environments, aims to protect the production environment and production data from unauthorized or inappropriate change, exposure, or disruption.

Development and testing activities often involve code changes, debugging, experimental configurations, test accounts, incomplete controls, and simulated transactions. If these activities occur directly in production, they can compromise confidentiality, integrity, and availability. Separation reduces the risk that untested software, test data, developer privileges, or debugging tools affect live systems and real business information. Control

5.13, Labelling of information, supports correct handling by communicating classification and protection needs, but it does not specifically protect production environments. Control 6.6, Confidentiality or non-disclosure agreements, supports legal and people-related confidentiality commitments, but it does not directly separate technical environments. The exam logic focuses on the control whose stated purpose is to protect production systems and data from risks introduced by development and testing. Therefore, option B is correct.

References/Chapters: ISO/IEC 27002:2022, Control 8.31 Separation of development, testing and operational environments; Control 8.32 Change management; Control 8.29 Security testing in development and acceptance.

#### NEW QUESTION # 14

Which statement below describes the principle of confidentiality?

- A. Property of accuracy and completeness
- B. Property of being accessible and usable upon demand by an authorized entity
- **C. Property that information is not made available or disclosed to unauthorized individuals, entities, or processes**

**Answer: C**

Explanation:

Confidentiality means that information is protected from unauthorized disclosure or availability. The correct statement is option A because it expresses the essential confidentiality concept: information must not be made available or disclosed to unauthorized individuals, entities, or processes. ISO/IEC 27002 supports confidentiality through controls such as information classification, labelling, access control, identity management, authentication, cryptography, data masking, information transfer rules, and data leakage prevention. The purpose is to ensure that only approved users, systems, or processes can view or receive information according to business need and authorization. Option B describes integrity, because accuracy and completeness relate to whether information remains correct and unaltered. Option C describes availability, because accessibility and usability on demand relate to authorized access when needed. In ISO/IEC 27002, many controls are mapped to confidentiality, integrity, and availability through control attributes. A confidentiality breach can occur through excessive internal access, accidental disclosure, lost media, weak access permissions, exposed credentials, or insecure transfer. References/Chapters: ISO/IEC 27002:2022, Clause 4 control attributes; Control 5.12 Classification of information; Control 5.15 Access control; Control 8.24 Use of cryptography.

#### NEW QUESTION # 15

What should an organization do if it detects a vulnerability that does not have a corresponding threat?

- A. Both A and C
- B. Monitor the vulnerability for changes
- C. Recognize the vulnerability

**Answer: A**

Explanation:

A vulnerability with no currently identified corresponding threat should still be recognized and monitored. A vulnerability is a weakness that could be exploited, but risk usually depends on the relationship between assets, threats, vulnerabilities, likelihood, and consequences. When no active or relevant threat is identified, immediate treatment may not be proportionate. However, ignoring the vulnerability would be inconsistent with ISO/IEC 27002's risk-aware approach. Threat conditions change. A weakness that appears low priority today may become exploitable after a new attack technique, system exposure, business change, supplier change, or threat actor capability emerges. Recognizing the vulnerability ensures it is recorded and available for future assessment. Monitoring it ensures the organization detects changes in exploitability, exposure, or threat relevance. ISO/IEC 27002 supports this through threat intelligence and management of technical vulnerabilities, both of which require organizations to remain alert to changes in the threat and vulnerability landscape. Therefore, the correct answer is both recognizing and monitoring the vulnerability. References /Chapters: ISO/IEC 27002:2022, Control 5.7 Threat intelligence; Control 8.8 Management of technical vulnerabilities; Control 5.36 Compliance with policies, rules and standards for information security.

#### NEW QUESTION # 16

When can clock synchronization be difficult?

- A. Both A and B
- B. When using only on-premises services
- C. When using multiple cloud services

**Answer: C**

Explanation:

Clock synchronization can be difficult when using multiple cloud services. ISO/IEC 27002 Control 8.17 emphasizes that clocks of information processing systems should be synchronized to approved time sources.

Accurate time is essential for logging, monitoring, incident investigation, transaction integrity, forensic analysis, authentication, certificate validation, and event correlation. In a simple on-premises environment, an organization may centrally manage time sources using internal NTP servers or domain services. In multi- cloud environments, systems may span different providers, regions, platforms, managed services, containers, serverless functions, and third-party logging systems. Each environment may have different time settings, time source controls, administrative access limits, time zone handling, timestamp formats, and logging precision. This makes consistent synchronization and correlation more challenging. Option A is not the best answer because "only on-premises services" are typically easier to synchronize under a single administrative model. Option C is too broad because the question asks when synchronization can be difficult, and the ISO

/IEC 27002 exam logic points to multiple cloud services. References/Chapters: ISO/IEC 27002:2022, Control 8.17 Clock synchronization; Control 8.15 Logging; Control 5.23 Information security for use of cloud services.

#### NEW QUESTION # 17

In which group of controls does Control 7.9 Security of assets off-premises belong?

- A. Physical
- B. Organizational
- C. Technological

**Answer: A**

Explanation:

Control 7.9, Security of assets off-premises, belongs to the physical control group. ISO/IEC 27002:2022 organizes controls into four themes: organizational controls, people controls, physical controls, and technological controls. Controls in Clause 7 are physical controls, and Control 7.9 specifically addresses protection of organizational assets when they are outside the organization's premises. This includes laptops, mobile devices, storage media, documents, portable equipment, and other assets used during travel, remote work, home working, customer visits, supplier sites, or field operations. Off-premises use increases physical risk because assets may be exposed to theft, loss, damage, unauthorized viewing, insecure storage, or uncontrolled environments. Although technological measures such as encryption and remote wipe may support this control, the control itself is placed in the physical theme because its

focus is the secure handling and protection of assets outside controlled facilities. Option A is incorrect because organizational controls are in Clause 5. Option C is incorrect because technological controls are in Clause 8. References/Chapters: ISO/IEC 27002:2022, Clause 7 Physical controls; Control 7.9 Security of assets off-premises; Clause 4 Structure of the standard.

## NEW QUESTION # 18

.....

As we all know that if we get a certificate for the exam, we will have more advantages in the job market. We have ISO-IEC-27002-Foundation study guide for you to get the certificate quickly. Besides, we are pass guarantee, if you indeed fail the exam, we will be money back guarantee. ISO-IEC-27002-Foundation Study Guide of us obtain many good feedbacks from our customers. Free demo of ISO-IEC-27002-Foundation exam dumps are provided by us, you can have a try before you buy them, so that you can know the mode of the ISO-IEC-27002-Foundation learning materials.
