

# All Objectives for the Latest SAP-C02 Pdf Demo Download

What's more, part of that Pass4training SAP-C02 dumps now are free: <https://drive.google.com/open?id=1H6422pZXmbEq5cW2wE2xlVVG6I7ncAq7>

With the development of information and communications technology, we are now living in a globalized world. SAP-C02 information technology learning is correspondingly popular all over the world. Modern technology has changed the way how we live and work. When it comes to the study materials selling in the market, qualities are patchy. But our SAP-C02 test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our SAP-C02 Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.

The SAP-C02 certification exam consists of multiple-choice and multiple-answer questions that evaluate an individual's knowledge and expertise in various areas of AWS services, including networking, security, storage, application services, and database technologies. SAP-C02 exam also tests an individual's ability to design and deploy complex architectures using AWS services and features, such as AWS CloudFormation, AWS Elastic Beanstalk, and Amazon EC2 Auto Scaling. Passing the SAP-C02 exam requires a deep understanding of AWS services and their integration with other systems, as well as the ability to identify and resolve complex technical problems. AWS Certified Solutions Architect - Professional (SAP-C02) certification is highly valued by employers and provides opportunities for individuals to advance their careers in cloud computing.

The SAP-C02 Exam is designed to test the candidate's knowledge and skills in various AWS services and features, such as AWS Elastic Beanstalk, AWS Lambda, AWS CloudFormation, AWS Identity and Access Management (IAM), AWS Elastic Load Balancing (ELB), and Amazon RDS. SAP-C02 exam also covers topics such as security, cost optimization, and performance tuning. Passing SAP-C02 exam demonstrates that the candidate has a deep understanding of how to design and deploy complex AWS-based applications that meet the business requirements and ensure high availability and scalability.

## 2026 Trustable Amazon Pdf Demo SAP-C02 Download

If you are going to prepare for the SAP-C02 exam in order to get the related certification and improve yourself, you are bound to be very luck. Because you meet us, we are willing to bring a piece of good news for you. With the joint efforts of all parties, our company has designed the very convenient and useful SAP-C02 Study Materials. More importantly, the practices have proven that the study materials from our company have helped a lot of people achieve their goal and get the related certification.

## Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample Questions (Q384-Q389):

### NEW QUESTION # 384

A company is running an application in the AWS Cloud. The application consists of microservices that run on a fleet of Amazon EC2 instances in multiple Availability Zones behind an Application Load Balancer. The company recently added a new REST API that was implemented in Amazon API Gateway. Some of the older microservices that run on EC2 instances need to call this new

API.

The company does not want the API to be accessible from the public internet and does not want proprietary data to traverse the public internet. What should a solutions architect do to meet these requirements?

- **A. Create an interface VPC endpoint for API Gateway, and set an endpoint policy to only allow access to the specific API. Add a resource policy to API Gateway to only allow access from the VPC endpoint. Change the API Gateway endpoint type to private.**
- B. Create an AWS Site-to-Site VPN connection between the VPC and the API Gateway. Use API Gateway to generate a unique API key for each microservice. Configure the API methods to require the key.
- C. Modify the API Gateway to use IAM authentication. Update the IAM policy for the IAM role that is assigned to the EC2 Instances to allow access to the API Gateway. Move the API Gateway into a new VPC. Deploy a transit gateway and connect the VPCs.
- D. Create an accelerator in AWS Global Accelerator, and connect the accelerator to the API Gateway. Update the route table for all VPC subnets with a route to the created Global Accelerator endpoint IP address. Add an API key for each service to use for authentication.

**Answer: A**

Explanation:

<https://docs.aws.amazon.com/apigateway/latest/developerguide/apigateway-vpc-endpoint-policies.html>

### NEW QUESTION # 385

A company needs to run a software package that has a license that must be run on the same physical host for the duration of its use. The software package is only going to be used for 90 days. The company requires patching and restarting of all instances every 30 days. How can these requirements be met using AWS?

- A. Run a dedicated instance with auto-placement disabled.
- **B. Run the instance on a dedicated host with Host Affinity set to Host.**
- C. Run the instance on a licensed host with termination set for 90 days.
- D. Run an On-Demand Instance with a Reserved Instance to ensure consistent placement.

**Answer: B**

Explanation:

Explanation

Host Affinity is configured at the instance level. It establishes a launch relationship between an instance and a Dedicated Host. (This sets which host the instance can run on.) Auto-placement allows you to manage whether instances that you launch are launched onto a specific host, or onto any available host that has matching configurations. Auto-placement must be configured at the host level. (This sets which instance the host can run.) When affinity is set to Host, an instance launched onto a specific host always restarts on the same host if stopped. This applies to both targeted and untargeted launches.

<https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/how-dedicated-hosts-work.html> When affinity is set to Off, and you stop and restart the instance, it can be restarted on any available host.

However, it tries to launch back onto the last Dedicated Host on which it ran (on a best-effort basis).

### NEW QUESTION # 386

A company has automated the nightly retraining of its machine learning models by using AWS Step Functions. The workflow consists of multiple steps that use AWS Lambda. Each step can fail for various reasons and any failure causes a failure of the overall workflow. A review reveals that the retraining has failed multiple nights in a row without the company noticing the failure. A solutions architect needs to improve the workflow so that notifications are sent for all types of failures in the retraining process. Which combination of steps should the solutions architect take to meet these requirements? (Select THREE)

- A. Add a Catch field to all Task Map, and Parallel states that have a statement of "Error Equals": [ "states.Runtime" ] and "Next": "Email".
- B. Create a task named "Email" that forwards the input arguments to the SES email address.
- C. Add a new email address to Amazon Simple Email Service (Amazon SES). Verify the email address.
- **D. Create an Amazon Simple Notification Service (Amazon SNS) topic with a subscription of type "Email" that targets the team's mailing list.**
- **E. Add a Catch field all Task Map, and Parallel states that have a statement of "Error Equals": [ "States.ALL" ] and "Next": "Email".**

- F. Create a task named "Email" that forwards the input arguments to the SNS topic

**Answer: D,E,F**

Explanation:

Create an Amazon Simple Notification Service (Amazon SNS) topic with a subscription of type "Email" that targets the team's mailing list. This will create a topic for sending notifications and add a subscription for the team's email list to that topic. C. Add a Catch field to all Task, Map, and Parallel states that have a statement of "ErrorEquals": [ "States.ALL" ] and "Next": "Email". This will ensure that any errors that occur in any of the steps in the workflow will trigger the "Email" task, which will forward the input arguments to the SNS topic created in step A. B. Create a task named "Email" that forwards the input arguments to the SNS topic. This will allow the company to send email notifications to the team's mailing list in case of any errors occurred in any step in the workflow.

### NEW QUESTION # 387

A company that provides image storage services wants to deploy a customer-facing solution to AWS. Millions of individual customers will use the solution. The solution will receive batches of large image files, resize the files, and store the files in an Amazon S3 bucket for up to 6 months.

The solution must handle significant variance in demand. The solution must also be reliable at enterprise scale and have the ability to rerun processing jobs in the event of failure.

Which solution will meet these requirements MOST cost-effectively?

- A. Use Amazon Simple Queue Service (Amazon SQS) to process the S3 event that occurs when a user stores an image. Run an AWS Lambda function that resizes the image and stores the resized file in an S3 bucket that uses S3 Standard-Infrequent Access (S3 Standard-IA). Create an S3 Lifecycle policy to move all stored images to S3 Glacier Deep Archive after 6 months.
- B. Use AWS Step Functions to process the S3 event that occurs when a user stores an image. Run an AWS Lambda function that resizes the image in place and replaces the original file in the S3 bucket. Create an S3 Lifecycle expiration policy to expire all stored images after 6 months.
- C. Use Amazon EventBridge to process the S3 event that occurs when a user uploads an image. Run an AWS Lambda function that resizes the image in place and replaces the original file in the S3 bucket. Create an S3 Lifecycle expiration policy to expire all stored images after 6 months.
- D. Use S3 Event Notifications to invoke an AWS Lambda function when a user stores an image. Use the Lambda function to resize the image in place and to store the original file in the S3 bucket. Create an S3 Lifecycle policy to move all stored images to S3 Standard-Infrequent Access (S3 Standard-IA) after 6 months.

**Answer: D**

Explanation:

Explanation

S3 Event Notifications is a feature that allows users to receive notifications when certain events happen in an S3 bucket, such as object creation or deletion. Users can configure S3 Event Notifications to invoke an AWS Lambda function when a user stores an image in the bucket. Lambda is a serverless compute service that runs code in response to events and automatically manages the underlying compute resources<sup>2</sup>. The Lambda function can resize the image in place and store the original file in the same S3 bucket. This way, the solution can handle significant variance in demand and be reliable at enterprise scale. The solution can also rerun processing jobs in the event of failure by using the retry and dead-letter queue features of Lambda<sup>2</sup>.

S3 Lifecycle is a feature that allows users to manage their objects so that they are stored cost-effectively throughout their lifecycle<sup>3</sup>. Users can create an S3 Lifecycle policy to move all stored images to S3 Standard-Infrequent Access (S3 Standard-IA) after 6 months. S3 Standard-IA is a storage class designed for data that is accessed less frequently, but requires rapid access when needed. It offers a lower storage cost than S3 Standard, but charges a retrieval fee. Therefore, moving the images to S3 Standard-IA after 6 months can reduce the storage cost for the solution.

Option A is incorrect because using AWS Step Functions to process the S3 event that occurs when a user stores an image is not necessary or cost-effective. AWS Step Functions is a service that lets users coordinate multiple AWS services into serverless workflows. However, for this use case, a single Lambda function can handle the image resizing task without needing Step Functions. Option B is incorrect because using Amazon EventBridge to process the S3 event that occurs when a user uploads an image is not necessary or cost-effective. Amazon EventBridge is a serverless event bus service that makes it easy to connect applications with data from a variety of sources. However, for this use case, S3 Event Notifications can directly invoke the Lambda function without needing EventBridge.

Option D is incorrect because using Amazon Simple Queue Service (Amazon SQS) to process the S3 event that occurs when a user stores an image is not necessary or cost-effective. Amazon SQS is a fully managed message queuing service that enables users to decouple and scale microservices, distributed systems, and serverless applications. However, for this use case, S3 Event

Notifications can directly invoke the Lambda function without needing SQS. Moreover, storing the resized file in an S3 bucket that uses S3 Standard-IA will incur a retrieval fee every time the file is accessed, which may not be cost-effective for frequently accessed files.

### NEW QUESTION # 388

A large company in Europe plans to migrate its applications to the AWS Cloud.

The company uses multiple AWS accounts for various business group.

A data privacy law requires the company to restrict developers' access to AWS European Regions only.

What should the solutions architect do to meet this requirement with the LEAST amount of management overhead?

- **A. Enable AWS Organizations, attach the AWS accounts, and create OUs for European Regions and non-European Regions.  
Create SCPs to limit access to non-European Regions and attach the policies to the OUs.**
- B. Set up AWS Single Sign-On and attach AWS accounts.  
Create permission sets with policies to restrict access to non-European Regions.  
Create IAM users and IAM groups in each account.
- C. Enable AWS Organizations, attach the AWS accounts, and create OUs for European Regions and non-European Regions.  
Create permission sets with policies to restrict access to non-European Regions.  
Create IAM users and IAM groups in the primary account.
- D. Create IAM users and IAM groups in each account.  
Create IAM policies to limit access to non-European Regions. Attach the IAM policies to the IAM groups.

**Answer: A**

Explanation:

This policy uses the Deny effect to deny access to all requests for operations that don't target one of the two approved regions (eu-central-1 and eu-west-1).

[https://docs.aws.amazon.com/organizations/latest/userguide/orgs\\_manage\\_policies\\_scps\\_examples\\_general.html#example-scp-deny-region](https://docs.aws.amazon.com/organizations/latest/userguide/orgs_manage_policies_scps_examples_general.html#example-scp-deny-region)

### NEW QUESTION # 389

.....

Our company pays high attentions to the innovation of our SAP-C02 study dump. We constantly increase the investment on the innovation and build an incentive system for the members of the research expert team. Our experts group specializes in the research and innovation of our SAP-C02 exam practice guide and supplements the latest innovation and research results into the SAP-C02 Quiz prep timely. Our experts group collects the latest academic and scientific research results and traces the newest industry progress in the update of the SAP-C02 study materials.
