#### NEW QUESTION # 59

In the administration console of the Cloud Identity Services, which system property types can you add? Note:

There are 2 correct answers to this question.

- A. Standard
- B. Default
- C. Credential
- D. Internal

**Answer: A,C**

Explanation:

In the administration console of SAP Cloud Identity Services, administrators can add system property types to configure system behavior and integration settings. The Credential property type allows the definition of authentication credentials, such as usernames

and passwords, for connecting to external systems or identity providers, ensuring secure communication. The Standard property type is used to configure general system settings, such as URLs, timeouts, or other operational parameters, that are essential for system functionality.

These property types enable flexible and secure management of identity services. Internal and Default are not recognized property types in this context; Internal may refer to system-internal configurations not exposed to administrators, and Default is not a specific property type but rather a concept for preconfigured values. This structure supports robust identity management across SAP's cloud ecosystem.
