快速下載的CompTIA 220-1101題庫更新資訊是行業領先材料&熱門的220-1101: CompTIA A+ Certification Exam: Core 1

如果你認為你可以在你的職業生涯中面臨著獨特的挑戰，那麼CompTIA的220-1101考試應該必須通過。一個真正的、全面的瞭解CompTIA的220-1101測試的網站Testpdf，我們獨家線上的CompTIA的220-1101考試的試題及答案，通過考試是很容易的，我們Testpdf保證100%成功，Testpdf是一個準備通過認證的專業公認的領導者，它提供了追求最全面的認證標準行業培訓方式。Testpdf CompTIA的220-1101考古題的試題及答案，你會發現它是目前市場上最徹底最準確及最新的實踐檢驗。當你擁有了Testpdf CompTIA的220-1101的問題及答案，就會讓你有了第一次通過考試的困難和信心。

最新的 A+ 220-1101 免費考試真題 (Q861-Q866):

問題 #861

An end user's domain password expires while they are working from home. The end user tries to reset the password using Ctrl+Alt+Delete and then receives the following message:

Configuration information could not be read from the domain controller, either because the machine is unavailable or because access is denied.

Which of the following will resolve this issue?

- A. Reset the account in Active Directory.
- B. Join the Wi-Fi network.
- C. Connect to the VPN.
- D. Restart the computer.

答案：C

解題說明：

To change a domain password from a remote location, the system must communicate with the domain controller. Since the user is

working from home, they need to connect to the corporate VPN to establish that secure connection. Without it, the password change cannot be authenticated.

* Option A: Restarting will not resolve the lack of connection to the domain controller.

* Option C: Resetting the password in AD could help, but doesn't let the user reset it themselves.

* Option D: The user may already be on Wi-Fi; the issue is with connecting to the corporate network, not local.

CompTIA A+ Core 1 Exam Objective Reference:

* Objective 1.6: Given a scenario, configure basic mobile device network connectivity and application support.

問題 #862

Which of the following network devices should a technician install in order to isolate voice traffic on the network?

- A. DSL filter
- B. Hub
- C. Network tap
- **D. Managed switch**

答案： D

解題說明：

A managed switch is a network device that can be configured to create VLANs (Virtual Local Area Networks), which are logical segments of a network that isolate traffic based on criteria such as function, security, or quality of service. A VLAN can be used to isolate voice traffic on the network, which can improve the performance and security of voice over IP (VoIP) applications. A network tap, a hub, and a DSL filter are not capable of creating VLANs.

問題 #863

A technician is troubleshooting a user's laptop that randomly turns off. The technician disassembles the laptop and notices that various pieces of small sticker paper within the device have changed color from red to blue. Which of the following is the most likely cause of the laptop's issues?

- A. Broken screen
- B. Swollen battery
- **C. Liquid damage**
- D. Overheating

答案： C

解題說明：

One of the possible causes of a laptop randomly turning off is liquid damage, which can cause short circuits, corrosion, and overheating of the internal components¹. Liquid damage can be hard to detect, especially if the laptop has been dried or cleaned after the spill². However, one of the indicators of liquid damage is the presence of small sticker paper within the device that changes color from red to blue³.

These stickers are called liquid contact indicators (LCIs), and they are designed to show if a device has been exposed to water or other liquids³. LCIs are usually red when dry, but they turn blue or purple when wet³. LCIs are often placed near the ports, battery, keyboard, and motherboard of laptops and other electronic devices³. LCIs can help technicians diagnose liquid damage and determine if the device is covered by warranty or not³.

問題 #864

A user submits a help desk ticket regarding a smartphone that will no longer accept its charging cable. The assigned technician notices the phone does not have a protective case, and the user constantly transport the phone in a pocket. The technician attempts to use a secondary charger, but the cable falls out of the phone.

Which of the following is the MOST likely cause of the issue?

- A. The phone has experienced water damage, thus the battery is not charging.
- B. The phone requires a firmware update to address charging issues.
- **C. The charge port contains foreign objects, such as lint.**
- D. The phone's battery has swelled, preventing the utilization of the charge port.

答案： C

解題說明：

The symptoms suggest that the charging cable falls out of the phone, indicating that the charge port may contain foreign objects such as lint, which can interfere with the connection between the charging cable and the phone.

問題 #865

A user wants to create a VM on a computer. Which of the following should the user check first?

- A. BIOS CPU settings
- B. Hard drive space
- C. Graphics card compatibility
- D. Installed RAM amount

答案：A

解題說明：

Before creating a virtual machine (VM) on a computer, it's crucial to ensure that the CPU supports virtualization and that this feature is enabled in the BIOS (or UEFI) settings. While sufficient RAM and hard drive space are also important for running VMs effectively, and compatibility with the graphics card might be a consideration for VMs with intensive graphical requirements, the foundational step is to verify that the CPU supports virtualization and that this feature is activated in the BIOS settings. This is because virtualization technology, often referred to as VT-x (on Intel CPUs) or AMD-V (on AMD CPUs), is a prerequisite for running most virtualization software efficiently.
