Splunk Core Certified Power User Exam Sample Questions (Q86-Q91):

NEW QUESTION # 86

In what order are the following knowledge objects/configurations applied?

- A. Field Extractions, Lookups, Field Aliases
- B. Lookups, Field Aliases, Field Extractions
- C. Field Aliases, Field Extractions, Lookups

- **D. Field Extractions, Field Aliases, Lookups**

Answer: D

Explanation:

Reference:

Knowledge objects are entities that you create to add knowledge to your data and make it easier to search and analyze². Some examples of knowledge objects are field extractions, field aliases and lookups². Field extractions are methods that extract fields from your raw data using various techniques such as regular expressions, delimiters or key-value pairs². Field aliases are ways to assign alternative names to existing fields without changing the original field names or values². Lookups are ways to enrich your data with additional information from external sources such as CSV files or databases². The order in which these knowledge objects/configurations are applied is as follows: field extractions, field aliases and then lookups². This means that Splunk first extracts fields from your raw data, then applies any aliases to the extracted fields and then performs any lookups on the aliased fields². Therefore, option B is correct, while options A, C and D are incorrect.

NEW QUESTION # 87
