Salesforce Certified Platform Development Lifecycle and Deployment Architect Sample Questions (Q163-Q168):

NEW QUESTION # 163

Universal Container has multiple departments who use Salesforce and request changes: Sales, Service, Back Office, Marketing, etc. Each of these departments makes independent purchase decisions for AppExchange apps, field requests, and page layouts, resulting in low adoption and under-use of standard Salesforce capabilities. What mechanism should a Technical Architect recommend to increase use of standard Salesforce functionality?

- A. Requirements Traceability Matrix
- B. Project Management Office
- C. Change Control Board
- **D. Center of Excellence**

Answer: D

NEW QUESTION # 164

Universal Containers has just completed several projects, including new custom objects and custom fields. Administrators are having difficulty maintaining the application due to not knowing how objects and fields are being used. Which two options should an Architect recommend? Choose 2 answers

- A. Create Design standards to consistently use the description field on custom objects.
- B. Create Design standards to require help text on all custom fields and custom objects.
- C. Create Design standards to consistently use the description field on custom fields.
- D. Create Design standards with a document to store all custom objects and custom fields
- E. Create Design standards to require all custom fields on all custom object page layouts

Answer: A,C

NEW QUESTION # 165

Universal Containers (UC) has used Salesforce for the last 6 years with 50% custom code. UC has recently implemented continuous integration. UC wants to improve old test classes whenever new functionality invalidates tests. UC also wants to reduce the deployment time required. What should Architect recommend?

- A. Do not execute any test classes in sandboxes and Production.
- B. Execute all test classes in sandboxes and selected test classes in Production.
- C. Test classes cannot be executed in sandboxes.
- D. Do not execute test classes in sandboxes and all test classes in Production.

Answer: B

NEW QUESTION # 166

Universal Containers (UC) is considering updating their Salesforce Release Management process. Which three best practices should UC consider for Version Control? Choose 3 answers

- A. Maintain a single repository for application with individual branches for projects.
- B. Maintain a single entry point for production from the master branch.
- C. Maintain unrestricted access to the release sandboxes for all changes being deployed.
- D. Automation is a must with various application branches in the repository.
- E. Maintain separate developer branches for minor and major releases.

Answer: A,B,E

NEW QUESTION # 167

Cloud Kicks (CK) is launching a new sneaker line during the upcoming holiday season and needs to do a thorough batch data testing before Go-Live. CK is using Salesforce unlimited edition.
