**Latest AP-211 Exam Topics & AP-211 Exam Question**

our company made our AP-211 practice guide with accountability. Our AP-211 training dumps are made by our AP-211 exam questions responsible company which means you can gain many other benefits as well. We offer free demos of our for your reference, and send you the new updates if our experts make them freely. What is more, we give some favorable discount on our AP-211 Study Materials from time to time, which mean that you can have more preferable price to buy our products.

## Salesforce Health Cloud Accredited Professional Sample Questions (Q63-Q68):

### NEW QUESTION # 63

A developer needs to modify the out-of-the-box advanced Patient Card to display the Category, SubjectID, and Date for active Clinical Alerts.

Which three steps should the developer take to accomplish this?

Choose 3 answers

- **A. Create a DataRaptor to extract necessary data.**
- **B. Create and activate a new child card.**
- **C. Clone the parent card**
- D. Define session variables to control visibility of clinical data.
- E. Change the child card state to show active

**Answer: A,B,C**

Explanation:

The Advanced Patient Card in Health Cloud is a FlexCard-based UI component that can be extended to show more patient context, such as Clinical Alerts. To display additional fields (Category, SubjectID, Date for active alerts), the developer should:

A . Clone the parent card

Best practice is to clone the delivered parent Patient Card rather than edit it directly, so you preserve the Salesforce-provided baseline functionality.

B . Create and activate a new child card

Child cards display specific contextual data (such as Clinical Alerts).

To customize which fields show, you create a new child card and activate it.

C . Create a DataRaptor to extract necessary data

Clinical Alert data must be pulled from Health Cloud objects.

A DataRaptor Extract retrieves the required fields (Category, SubjectID, Date) for use in the FlexCard child component.

Why not the others?

D . Define session variables to control visibility of clinical data - Session variables can control context in OmniStudio, but they aren't required just to display fields on the Patient Card.

E . Change the child card state to show active - Card states are used for conditional rendering (loading, error, empty states).

Showing active alerts requires data filtering in the DataRaptor, not card state changes.

Salesforce Health Cloud Reference:

Salesforce Health Cloud - Advanced Patient Card

"Clone the Advanced Patient Card to customize it while preserving the delivered version."

"Use child cards to display detailed data such as conditions, medications, or clinical alerts."

"Retrieve data for FlexCards with DataRaptor Extracts."

### NEW QUESTION # 64

Which Health Cloud feature helps ensure compliance with Health Insurance Portability and Accountability Act (HIPAA) regulations?

- **A. User authentication and access control**
- B. Data visualization and analytics
- C. Social media integration
- D. Real-time monitoring and alerts

**Answer: A**

Explanation:

The requirement is to identify the Health Cloud feature that helps ensure compliance with the Health Insurance Portability and Accountability Act (HIPAA), which governs the protection of Protected Health Information (PHI). HIPAA compliance requires robust security measures, including access controls and data protection. Let's evaluate the options.

Option A: Data visualization and analytics

Step-by-Step Explanation:

User Authentication: Health Cloud requires users to authenticate via secure methods (e.g., username/password, MFA) to access the system.

Access Control: Administrators configure roles, profiles, and permission sets to restrict access to PHI based on the principle of least privilege.

Auditing: Health Cloud supports audit trails to track access and changes to PHI, ensuring traceability.

Compliance: These features align with HIPAA's requirements for administrative safeguards (e.g., access management) and technical safeguards (e.g., authentication).

Reference:

Option B: Real-time monitoring and alerts

Option C: User authentication and access control

Salesforce Security Guide, "HIPAA Compliance," states, "Salesforce Health Cloud supports HIPAA compliance through user authentication, access controls, and audit capabilities to protect PHI." Salesforce Health Cloud Admin Guide, "Security and Compliance," notes, "User authentication and access control ensure that only authorized personnel access sensitive patient data, aligning with HIPAA requirements." Option D: Social media integration Why Option C is Correct:

HIPAA mandates strict controls on who can access PHI, and user authentication and access control in Health Cloud directly address this by ensuring secure, role-based access to sensitive data. These features are foundational to Salesforce's HIPAA compliance strategy, as outlined in the Security Guide.

Additional Considerations:

Shield Platform Encryption: While not listed as an option, Health Cloud can use Shield Platform Encryption to further protect PHI, complementing access controls.

Audit Trails: The Salesforce Security Guide highlights audit trails as part of HIPAA compliance, which work alongside authentication and access controls.

Reference Summary:

Salesforce Security Guide: HIPAA compliance and user authentication/access control.

Salesforce Health Cloud Admin Guide: Security and compliance features.

Salesforce Architect Resources: Security best practices for HIPAA.

### NEW QUESTION # 65

A payer receives faxes for clinical review as part of the determination process. The payer needs Health Cloud to automatically capture the data from the documents received from patients and manage the end-to-end approval process.

Which two Health Cloud capabilities should a consultant recommend as a way to build this process?

Choose 2 answers

- A. Care Authorizations
- B. Intelligent Document Automation
- C. Utilization Management
- D. Integrated Care Management

**Answer: B,C**

Explanation:

Step-by-Step Explanation:

Intelligent Document Automation:

Exact Extract:

"Intelligent Document Automation in Health Cloud automatically extracts data from incoming documents, including faxes, and creates structured data for downstream workflows." Reference:

Utilization Management:

Exact Extract:

"Utilization Management provides workflows and automation to support end-to-end approval processes, including clinical review and authorizations." Why Not Other Options?

Integrated Care Management: Focuses on care plans and assessments, not document automation or clinical approval processes.

Care Authorizations: Part of Utilization Management but not the capability for document ingestion and process automation.

### NEW QUESTION # 66

Prior to go-live for Bloomington Caregivers, a consultant loads the future system users into Salesforce.

Which two permission set licenses should the consultant assign to the users to give them access to Health Cloud?

Choose 2 answers

- A. Health Cloud Standard permission set license
- **B. Health Cloud permission set license**
- **C. Health Cloud Platform permission set license**
- D. Health Cloud Foundation permission set license

**Answer: B,C**

#### NEW QUESTION # 67

During a design session, the client asks for best practices around when to use DataRaptors vs. Integration Procedures. For which scenario should a consultant advise the client to use a single DataRaptor?

- A. The action must perform a SendMail task and check for any errors.
- B. The dataset requires connecting to an external data source, such as CSV or REST API.
- **C. The dataset required needs to read two SObjects with a clearly defined relationship.**
- D. The task requires both a read and write of SObject data.

**Answer: C**

Explanation:

DataRaptors are best for extracting, transforming, and loading Salesforce data, especially when handling data from related SObjects. Single DataRaptor for related SObjects:

Extract:

"Use a DataRaptor Extract when you need to read Salesforce data, such as retrieving fields from multiple related SObjects in a single read." (Source: Omnistudio Standard Guide - DataRaptors) Why not B, C, or D?

SendMail tasks, complex multi-step logic, or external data connections are handled by Integration Procedures, not DataRaptors.

#### NEW QUESTION # 68

.....

ActualTestsQuiz have the obligation to ensure your comfortable learning if you have spent money on our AP-211 study materials. We do not have hot lines. The pass rate of our AP-211 is as high as more then 98%. And you can enjoy our considerable service on AP-211 exam questions. So you are advised to send your emails to our email address.
