Analytics-Con-201 Latest Test Fee - Analytics-Con-201 Exam

They provide you the best learning prospects, by employing minimum exertions through the results are satisfyingly surprising, beyond your expectations. Despite the intricate nominal concepts, Analytics-Con-201 Analytics-Con-201 exam dumps questions have been streamlined to the level of average candidates, pretense no obstacles in accepting the various ideas. For the additional alliance of your erudition, Our ITdumpsfree offer an interactive Analytics-Con-201 Exam testing software. This startling exam software is far more operational than real-life exam simulators.

Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q13-Q18):

NEW QUESTION # 13

Universal Containers (UC) is using CRM Analytics to create two datasets.

* Dataset A: Contains a list of activities with an "activityID" dimension and a "userID" dimension

* Dataset B: Contains a list of users with a "userID" dimension

UC wants to delete all activities from Dataset A related to users in Dataset B.

How should the CRM Analytics consultant help UC achieve this?

- A. Use the "update" transformation and utilize the "filter" node.
- **B. Use the combination of recipe transformations: "join" and "filter".**
- C. Use the recipe node "delete" and set "userID" as the deletion ID.

Answer: B

NEW QUESTION # 14

A CRM Analytics consultant is building a dashboard for Cloud Kicks that is embedded in a separate Lightning page called "Management Dashboard" using a CRM Analytics Dashboard Component. The system administrator and the contract manager should both have access. The system administrator is able to see the dashboard and the data, but the contract manager sees a blank Lightning page.

What is causing the issue?

- A. The consultant has set up/enabled a 'Hide on Error' feature for the dashboard while embedding it.
- B. The consultant has set up a dashboard filter condition for data to be visible to system administrators only.
- C. The consultant has set up component visibility for the dashboard for system administrators only.

Answer: C

NEW QUESTION # 15

A CRM Analytics consultant has been asked to bring data from an external database as well as five external Salesforce environments into CRM Analytics. Twenty-five objects have been enabled from the local Salesforce connector.

The requirements are:

- * 10 objects should be enabled from an external database
 - * 12 objects each from three of the external Salesforce environments
 - * 15 objects each from the remaining two external Salesforce environments
- The consultant estimates each connector will, per object, bring between 1,000 and 1 million rows of data.

Which limit will be exceeded?

- A. Salesforce external connector number of synced rows
- B. Storage rows of data
- C. Total number of enabled objects

Answer: C

Explanation:

In evaluating the scenario presented where multiple external sources and objects are being integrated into CRM Analytics, we need to consider the total number of enabled objects across all connections. Here's a breakdown:

- * 10 objects from an external database
- * 12 objects each from three external Salesforce environments, totaling 36 objects
- * 15 objects each from two external Salesforce environments, totaling 30 objects
- * 25 objects already enabled from the local Salesforce connector

This brings us to a total of 101 objects enabled, which may exceed typical limits on the number of objects that can be enabled in a CRM Analytics environment, depending on the specific Salesforce licensing and platform limits.

NEW QUESTION # 16

A CRM Analytics consultant has been tasked with providing access to CRM Analytics for a few users. They should be able to view the data but unable to export it.

Which permission should the consultant make sure to NOT include?

- A. View CRM Analytics Assets
- B. Export CRM Analytics data
- C. Download CRM Analytics data

Answer: C

NEW QUESTION # 17

CRM Analytics team plans to enable data sync.

Which limit specific to data sync should the team consider before enabling the feature because it may impact existing jobs?

- A. Maximum number of Full Sync connection mode enabled
- B. Maximum number of objects that can be enabled for data sync
- C. Maximum number of data sync jobs cannot exceed the limit

Answer: B

Explanation:

In CRM Analytics, when planning to enable data sync, one of the critical considerations is the limit on the number of objects that can be enabled for data sync. This limit is essential because it determines how many different Salesforce objects (like Accounts, Opportunities, etc.) can be synchronized concurrently. Exceeding this limit could impact the performance of existing sync jobs or prevent new sync jobs from being configured.

Key points to consider include:

- * Performance Impact: Syncing too many objects simultaneously can lead to increased load times and potential delays in data availability, impacting users' ability to access up-to-date information.

- * Resource Allocation: CRM Analytics allocates resources based on the number of objects being synchronized, and there are practical limits to these resources to ensure stable and efficient operation.

For a more detailed understanding and to manage these limits effectively, Salesforce provides documentation and guidelines within the CRM Analytics resources, which can be further explored in the Trailhead modules specifically focusing on data management and synchronization practices.

NEW QUESTION # 18

.....

This updated Salesforce Analytics-Con-201 exam study material of ITdumpsfree consists of these 3 formats: Salesforce Certified CRM Analytics and Einstein Discovery Consultant (Analytics-Con-201) PDF, desktop practice test software, and web-based practice exam.
