ITIL-4-Transition Exam Fragen & ITIL-4-Transition Deutsch Prüfungsfragen

Warum sind die Fragenkataloge zur ITIL ITIL-4-Transition Zertifizierungsprüfung von ExamFragen beliebter als die anderen? Erstens: Resonanz. Wir müssen die Bedürfnisse der Kandidaten kennen, und umfassender als andere Websites. Zweitens: Spezialität. Um unsere Angelegenheiten zu erledigen, müssen wir alle unwichtigen Chancen aufgeben. Drittens: Man wird vielleicht eine Sache nach ihrem Aussehen beurteilen. Vielleicht haben wir die besten Produkte von guter Qualität. Aber wenn wir sie in einer kitschig Weise repräsentieren, werden Sie sicher zu den kitschigen Produkten gehören. Hingegen repräsentieren wir sie in einer fachlichen und kreativen Weise werden wir die besten Effekte erzielen. Die Fragenkataloge zur ITIL ITIL-4-Transition Zertifizierungsprüfung von ExamFragen sind solche erfolgreichen Fragenkataloge.

Die ITIL 4 Managing Professional Transition Prüfung ist eine anspruchsvolle Prüfung, die eine angemessene Vorbereitung und Vertrautheit mit dem ITIL v3 Framework erfordert. Es ist wichtig, die neuen Konzepte, die in ITIL 4 eingeführt wurden, zu verstehen und sich mit den Service-Management-Praktiken und Leitprinzipien vertraut zu machen. Eine angemessene Vorbereitung und Übung sind entscheidend, um die Prüfung zu bestehen und ein ITIL 4 Managing Professional zu werden.

ITIL 4 Managing Professional Transition ITIL-4-Transition Prüfungsfragen mit Lösungen (Q21-Q26):

21. Frage

A legacy financial system requires the user to manually enter the time and date of the transaction to meet regulatory requirements. A recent internal audit has shown that these fields are often blank.

Which are effective controls that could improve compliance?

1. Modify the application to automatically add the current time and date when transaction is entered
2. Establish a communication plan to remind users of the importance of time and date on transactions
3. Develop a goals cascade so all staff know their role in achieving company goals
4. Create a report showing non-compliant records and take action to correct

- A. 3 and 4

- B. 1 and 2
- C. 2 and 3
- D. 1 and 4

Antwort: D

Begründung:

According to ITIL 4, an effective control environment is one that ensures that the organization's objectives are achieved in a reliable and compliant manner¹. Effective controls are the mechanisms that prevent, detect, or correct errors, fraud, or non-compliance in the organization's processes and activities². Some of the characteristics of effective controls are that they are aligned with the organization's goals, policies, and standards, they are proportionate to the level of risk, they are consistent and transparent, they are regularly monitored and reviewed, and they are responsive to changes and improvements³.

In the scenario given, the legacy financial system requires the user to manually enter the time and date of the transaction to meet regulatory requirements, but these fields are often blank. This indicates a lack of compliance and accuracy in the financial reporting process, which could expose the organization to legal, financial, or reputational risks. Therefore, some effective controls that could improve compliance are:

* Modify the application to automatically add the current time and date when transaction is entered. This is a preventive control that reduces the risk of human error or omission by ensuring that the required information is always captured and recorded in the system. This control also enhances the efficiency and reliability of the process by eliminating the need for manual input.

* Create a report showing non-compliant records and take action to correct. This is a detective and corrective control that identifies and resolves any instances of non-compliance or inaccuracy in the financial records. This control also provides feedback and evidence for the performance and effectiveness of the process and the controls.

The other options are not effective controls for improving compliance in this scenario because they do not directly address the root cause of the problem or provide a specific solution. Establishing a communication plan to remind users of the importance of time and date on transactions is a good practice, but it does not guarantee that the users will follow the instructions or comply with the requirements. Developing a goals cascade so all staff know their role in achieving company goals is a strategic activity, but it does not specify how the financial reporting process or the legacy system will be improved or controlled. Therefore, the best answer is D. 1 and 4. References:

22. Frage

An organization has IT divisions distributed globally. As the organization has grown, it has become difficult to align the activities of the IT divisions with the organization's objectives. How can the organization ensure that all IT activities are aligned with the organization's objectives?

- A. Collect feedback from both organizational and IT leadership from each region
- B. Prioritize risk mitigation strategies in alignment with the organization's risk appetite
- C. Put compliance controls in place to ensure that all centers of expertise are following the same practices
- D. Establish increasingly detailed objectives at each level of the organization that align directly with the objectives of the layer above

Antwort: D

Begründung:

The best way for the organization to ensure that all IT activities are aligned with the organization's objectives is to establish increasingly detailed objectives at each level of the organization that align directly with the objectives of the layer above. This is based on the ITIL 4 principle of cascading objectives, which is a method for translating high-level strategic objectives into more specific and measurable operational objectives. By doing this, the organization can create a clear line of sight between the vision, mission, and goals of the organization and the actions and outcomes of the IT divisions. This also enables the organization to monitor and evaluate the performance and value of the IT activities and ensure that they are contributing to the achievement of the organization's objectives. The other options are not sufficient to ensure alignment, as they do not address the root cause of the misalignment, which is the lack of clarity and consistency in the objectives. Risk mitigation strategies, compliance controls, and feedback collection are important aspects of IT governance, but they do not necessarily ensure that the IT activities are aligned with the organization's objectives. They may also create unnecessary bureaucracy and overhead that may hinder the agility and innovation of the IT divisions. References: <https://www.atlassian.com/blog/technology/what-the-new-itil->

23. Frage

An organization wants to become more efficient by reducing the amount of unnecessary work they do. Which approach would be MOST helpful?

- A. Safety culture
- B. DevOps
- C. Lean OK
- D. Site reliability engineering

Antwort: C

24. Frage

Which practice has a purpose that includes the management of financially valuable components that can contribute to the delivery of an IT service?

- A. Change enablement
- B. IT asset management
- C. Service configuration management
- D. Deployment management

Antwort: B

Begründung:

Comprehensive Explanation:

IT Asset Management is defined as:

The practice responsible for planning and managing the full lifecycle of IT assets, which are financially valuable components that support service delivery.

Thus, Option D is correct.

25. Frage

In service relationships what is a benefit of identifying consumer roles?

- A. It enables effective stakeholder management
- B. It removes constraints from the customer
- C. It provides shared service expectations
- D. It enables a common definition of value

Antwort: A
