

Valid Pdf PEGACPRSA22V1 Pass Leader & Leader in Certification Exams Materials & Free Download PEGACPRSA22V1 Latest Test Guide

BONUS!!! Download part of BraindumpsVCE PEGACPRSA22V1 dumps for free: <https://drive.google.com/open?id=1jPxdI6vZgsEcqASwNyenSPRmNVXd7X2R>

All time and energy you devoted to the PEGACPRSA22V1 preparation quiz is worthwhile. With passing rate up to 98 percent and above, our PEGACPRSA22V1 practice materials are highly recommended among exam candidates. So their validity and authority are unquestionable. Our PEGACPRSA22V1 Learning Materials are just staring points for exam candidates, and you may meet several challenging tasks or exams in the future about computer knowledge, we can still offer help. Need any help, please contact with us again!

The PEGACPRSA22V1 exam is an essential certification exam for professionals who want to demonstrate their expertise in Pega Robotic Automation. With the increasing demand for automation in businesses, there is a need for skilled professionals who can design and implement automation solutions using Pega Robotics technology. Passing the PEGACPRSA22V1 Exam is a great way to showcase your skills and demonstrate your knowledge of Pega Robotics Automation technology.

Unique Pegasystems PEGACPRSA22V1 Pdf Questions

To avoid this situation, we recommend you PEGACPRSA22V1 real dumps. This product contains everything you need to crack the PEGACPRSA22V1 certification exam on the first attempt. By choosing BraindumpsVCE's updated dumps, you don't have to worry about appearing in the Certified Pega Robotics System Architect 22 (PEGACPRSA22V1) certification exam. BraindumpsVCE Pegasystems PEGACPRSA22V1 Dumps are enough to get you through the Certified Pega Robotics System Architect 22 (PEGACPRSA22V1) actual exam on the first try.

Candidates who want to take the PEGACPRSA22V1 Certification Exam must meet certain prerequisites. They must have completed the Pega Robotics System Architect Essentials course and have at least six months of experience working with Pega Robotics. They must also have a good understanding of RPA concepts and be familiar with the Pega platform.

Pegasystems Certified Pega Robotics System Architect 22 Sample Questions (Q58-Q63):

NEW QUESTION # 58

Deploying a robotic project to Pega Robot Manager requires configuring the Pega server and credentials. The server connectivity settings can be set up or adjusted in several ways.

Which three of the following options are methods to set up or adjust the Pega Server settings? (Choose Three)

- A. Rerun the Pega Robot Studio installation and configure the server settings.
- B. Manually edit the PegaStudioConfig.xml file from the Tools menu in Pega Robot Studio.
- C. Edit the Change Server fields during the deployment process.

- D. Configure the server settings during the initial installation of Pega Robot Studio.
- E. Edit the Server Connectivity settings in the Tools menu in Pega Robot Studio.

Answer: C,D,E

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

Pega Robot Studio provides multiple ways to configure or modify Pega Server connectivity settings used for Robot Manager deployment. These settings define the server URL, operator credentials, and authentication method.

According to the Pega Robotics System Design and Implementation Guide, section "Configuring Pega Server Connectivity":

"Server connectivity settings can be specified in multiple ways within Pega Robot Studio:

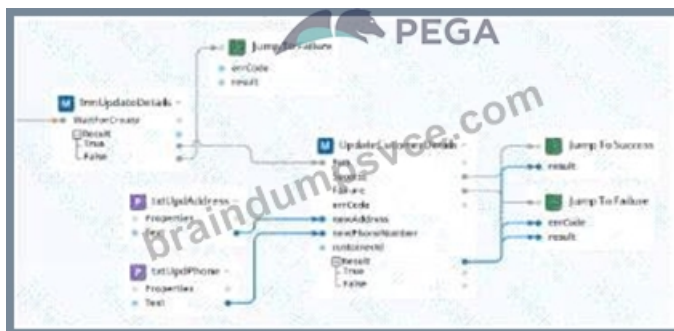

- * During the initial installation process, when prompted to enter Robot Manager URL and credentials.
- * By navigating to the Tools # Options # Server Connectivity menu to edit or test server details.
- * By adjusting the Change Server fields that appear during the deployment process to override existing configurations. Manual editing of XML files is not recommended for changing server connectivity settings." Detailed Reasoning:
- * A. Edit the Change Server fields during the deployment process - Correct. The deployment wizard allows adjusting or overriding existing server settings.
- * B. Configure the server settings during the initial installation of Pega Robot Studio - Correct. The installation wizard prompts for server setup.
- * C. Rerun the Pega Robot Studio installation and configure the server settings - Not necessary unless reinstallation is required.
- * D. Manually edit the PegaStudioConfig.xml file - Not recommended or supported for changing connectivity.
- * E. Edit the Server Connectivity settings in the Tools menu in Pega Robot Studio - Correct. This is the standard interface to modify or test connection settings.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Server Connectivity and Deployment Configuration section (Pega Robotics 19.1 and later).

NEW QUESTION # 59

Within your project for a car renting company, you create an automation that reads data From an online form and calls a subautomation that saves that data in the company's application. The UpdateCustomerDetails subautomation has two exit points, Success and Failure, and two output parameters. Result and errCode.

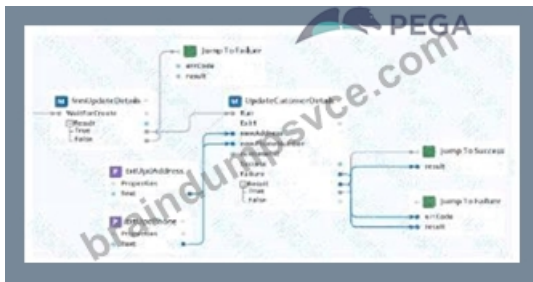

Which figure represents this subautomation?

- A.

- B.

- C.

- D.

Answer: B

Explanation:

* Pega Robotics Studio - Automation Design Concepts (Entry/Exit Points & Parameters)

"An automation can expose multiple exit points (for example, Success and Failure) and can define output parameters that return values to the caller. When the automation completes, the appropriate exit point is raised and the output parameters are made available to the caller."

* Pega Robotics Studio - Calling Automations (Run and Parameter Mapping)

"When one automation calls another, the called automation appears as a component with input parameters, output parameters, and exit points. The caller wires the Success/Failure exits to the next steps and maps output parameters (for example, result, errCode) to downstream logic." Why Option C is correct:

* The UpdateCustomerDetails block in Option C clearly shows two exit points - Success and Failure - and two output parameters - result and errCode - on the subautomation.

* The wiring demonstrates a typical pattern:

* On Success, the flow proceeds to a success path with result available.

* On Failure, the flow proceeds to a failure path with errCode available (the extra, unused result pin on the failure jump is permissible but not required).

* This matches the specification precisely: two exits (Success/Failure) and two outputs (result, errCode).

Why the other options are not correct:

* Option A: Shows errCode but does not expose result clearly as an output to the success path.

* Option B: The component does not display errCode as an output parameter of the subautomation.

* Option D: Emphasizes an additional boolean/conditional output and maps result on the failure path, which does not reflect the stated definition of the subautomation outputs.

Document Sources (Exact Extracts Reference):

* Pega Robotics Studio User Guide - Automation Design Concepts: Entry/Exit Points and Parameters.

* Pega Robotics Studio User Guide - Calling Automations and Mapping Inputs/Outputs.

* Pega Robotics System Certification Study Material - Subautomation design patterns (Success/Failure with output parameters).

NEW QUESTION # 60

Which two of the following Tool Windows are used in Pega Robot Studio? (Choose two.)

- A. Object Explorer
- B. Solution Explorer
- C. Designer windows
- D. Menu toolbar

Answer: C,D

NEW QUESTION # 61

Which project property setting do you set to True to automatically adjust the version numbering when deploying a project?

- A. Description field

- B. Version field
- **C. Increase Deployment Version**
- D. Environment Overrides

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

In Pega Robot Studio, the Increase Deployment Version property in the project settings is used to automatically update the deployment version number each time the project is deployed.

This ensures version consistency across builds and deployments in environments managed by Pega Robot Manager.

According to the Pega Robotics System Design and Implementation Guide, section "Project Deployment and Version Control":

"The Increase Deployment Version property, when set to True, automatically increments the project's deployment version number during the deployment process.

This feature helps maintain proper version tracking and eliminates the need for manual version adjustments before deployment."

Detailed Reasoning:

- * A. Environment Overrides - Used to specify environment-specific configuration overrides, not for version control.
- * B. Version field - Displays the current version number but does not auto-increment it.
- * C. Description field - Used for textual descriptions of the project only.
- * D. Increase Deployment Version - Correct. When set to True, it automatically adjusts the version numbering upon deployment.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Managing Versions and Deployments section (Pega Robotics 19.1 and later).

NEW QUESTION # 62

You are designing an attended project for a banking customer. This project requires you to add new customers from an application to a combo box in a custom user surface.

Which steps do you take to gain access to the methods of the combo box items within an automation?

- A. Open the Globals tab, filter for the method that you want to access, and then drag the method to the design surface.
- B. Select the combo box in the Palette tab of an automation, and then filter for the method that you want to access in the properties grid.
- C. Select the combo box in a design form of the user interface to open the Select action window.
- **D. Drag the combo box to the automation surface to open the Select action dialog box, and then filter for the method that you want to access.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

When working with UI controls such as combo boxes in a custom user interface (Windows form or User Interaction form), you can expose their methods and events by dragging the control from the Palette or Object Explorer to the automation design surface.

According to the Pega Robotics System Design and Implementation Guide, section "Accessing Control Methods and Properties in Automations":

"To access a control's methods or events in an automation, drag the control (such as a combo box or text box) from the Object Explorer or Palette to the automation surface.

The Select Action dialog box appears, allowing you to filter and choose the specific method or event (for example, AddItem, RemoveItem, or Clear)." Detailed Reasoning:

- * A. Drag the combo box to the automation surface... - Correct. This opens the Select Action dialog, exposing all available methods and events for that control.
- * B. Open the Globals tab... - Incorrect. The combo box methods are not global; they belong to a specific UI form.
- * C. Select the combo box in a design form... - Incorrect. This action edits UI layout, not automation logic.
- * D. Select the combo box in the Palette tab... - Incorrect. The properties grid shows attributes, not callable methods.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Using Control Methods and Events in Automations section (Pega Robotics 19.1 and later).
