Amazon AWS-Developer (AWS Certified Developer - Associate) Certification Exam is a globally recognized certification that validates an individual's expertise in developing and maintaining applications on the Amazon Web Services (AWS) platform. AWS Certified Developer Associate Exam (DVA-C02) certification is designed for professionals who possess a sound knowledge of AWS services and have experience in developing, deploying, and debugging cloud-based applications.

The AWS Certified Developer - Associate exam is intended for individuals who have at least one year of experience developing and maintaining applications on the AWS platform. AWS-Developer Exam covers a wide range of topics, including AWS core services, security, and best practices for developing applications on the platform. Candidates are expected to have experience with at least one programming language, such as Java, Python, or Ruby.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample

Questions (Q174-Q179):

NEW QUESTION # 174

A company has an internal website that gives users the ability to access contract data that is stored in an Amazon RDS DB instance. The number of contracts has increased, and several users have reported slow retrieval of the contract data.

The company wants to set up a cache to improve the latency. A developer must create a solution that ensures data resiliency. The data must be encrypted and must be partitioned by department. Which solution will meet these requirements?

- A. Amazon ElastiCache for Memcached with cluster mode disabled
- **B. Amazon ElastiCache for Memcached with cluster mode enabled**
- C. Amazon ElastiCache for Redis with cluster mode enabled
- D. Amazon ElastiCache for Redis with cluster mode disabled

Answer: B

NEW QUESTION # 175

A user wants to achieve High Availability with PostgreSQL DB. Which of the below mentioned functionalities helps achieve HA?

- A. Read Replica
- B. Multi region
- C. PostgreSQL does not support HA
- **D. Multi AZ**

Answer: D

Explanation:

The Multi AZ feature allows the user to achieve High Availability. For Multi AZ, Amazon RDS automatically provisions and maintains a synchronous "standby" replica in a different Availability Zone.

NEW QUESTION # 176

Which of the below mentioned commands allows the user to share the AMI with his peers using the AWS EC2 CLI?

- A. ec2-share-image-public
- **B. ec2-modify-image-attribute**
- C. ec2-share-image
- D. ec2-share-image-account

Answer: B

Explanation:

A user can share an AMI with another user / peer using the command: ec2-modify-image-attribute <AMI-ID> -l -a <AWS Account ID>

Reference: <http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/sharingamis-explicit.html>

NEW QUESTION # 177

A company requires that IP packet data be inspected for invalid or malicious content.

Which of the following approaches achieve this requirement? (Choose two.)

- A. Configure the CloudWatch Logs agent on each EC2 instance within the VPC. Perform inspection from the log data within CloudWatch Logs.
- **B. Configure the host-based agent on each EC2 instance within the VPC. Perform inspection within the host-based agent.**
- C. Configure Elastic Load Balancing (ELB) access logs. Perform inspection from the log data within the ELB access log files.
- D. Enable VPC Flow Logs for all subnets in the VPC. Perform inspection from the Flow Log data within Amazon CloudWatch Logs.
- **E. Configure a proxy solution on Amazon EC2 and route all outbound VPC traffic through it. Perform inspection within proxy**

software on the EC2 instance.

Answer: B,E

NEW QUESTION # 178

A developer needs to modify an application architecture to meet new functional requirements. Application data is stored in Amazon DynamoDB and processed for analysis in a nightly batch. The system analysts do not want to wait until the next day to view the processed data and have asked to have it available in near-real time.

Which application architecture pattern would enable the data to be processed as it is received?

- A. Schedule driven
- B. Fan-out driven
- C. Event driven
- D. Client-server driven

Answer: C
