

# Exam Google Professional-Cloud-DevOps-Engineer Score | Professional-Cloud-DevOps-Engineer Exam Testking

P.S. Free & New Professional-Cloud-DevOps-Engineer dumps are available on Google Drive shared by TorrentExam  
<https://drive.google.com/open?id=1jupNG78Qmm5WMKZ3FYtCwGEsSzDWfLQ8>

It is widely accepted that where there is a will, there is a way; so to speak, a man who has a settled purpose will surely succeed. To obtain the Professional-Cloud-DevOps-Engineer certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the Professional-Cloud-DevOps-Engineer exam, you need more external assistance to help yourself. We have engaged in this career for more than ten years and with our Professional-Cloud-DevOps-Engineer Exam Questions, you will not only get aid to gain your dreaming Professional-Cloud-DevOps-Engineer certification, but also you can enjoy the first-class service online.

In the Desktop Professional-Cloud-DevOps-Engineer practice exam software version of Google Professional-Cloud-DevOps-Engineer practice test is updated and real. The software is useable on Windows-based computers and laptops. There is a demo of the Professional-Cloud-DevOps-Engineer Practice Exam which is totally free. Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) practice test is very customizable and you can adjust its time and number of questions.

## Google Professional-Cloud-DevOps-Engineer Exam Testking - Professional-Cloud-DevOps-Engineer Valid Test Camp

Users who use our Professional-Cloud-DevOps-Engineer study materials already have an advantage over those who don't prepare for the exam. Our study materials can let users the most closed to the actual test environment simulation training, let the user valuable practice effectively on Professional-Cloud-DevOps-Engineer study materials, thus through the day-to-day practice, for users to develop the confidence to pass the exam. For examination, the power is part of pass the exam but also need the candidate has a strong heart to bear ability, so our Professional-Cloud-DevOps-Engineer Study Materials through continuous simulation testing, let users less fear when the real test, better play out their usual test levels, can even let them photographed, the final pass exam.

## Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q200-Q205):

### NEW QUESTION # 200

You are configuring Cloud Logging for a new application that runs on a Compute Engine instance with a public IP address. A user-managed service account is attached to the instance. You confirmed that the necessary agents are running on the instance but you cannot see any log entries from the instance in Cloud Logging. You want to resolve the issue by following Google-recommended practices. What should you do?

- A. Update the instance to use the default Compute Engine service account.
- **B. Add the Logs Writer role to the service account.**
- C. Enable Private Google Access on the subnet that the instance is in.
- D. Export the service account key and configure the agents to use the key.

**Answer: B**

Explanation:

The correct answer is A. Add the Logs Writer role to the service account.

To use Cloud Logging, the service account attached to the Compute Engine instance must have the necessary permissions to write log entries. The Logs Writer role (roles/logging.logWriter) provides this permission. You can grant this role to the user-managed service account at the project, folder, or organization level.

Private Google Access is not required for Cloud Logging, as it allows instances without external IP addresses to access Google APIs and services<sup>2</sup>. The default Compute Engine service account already has the Logs Writer role, but it is not a recommended practice to use it for user applications<sup>3</sup>. Exporting the service account key and configuring the agents to use the key is not a secure way of authenticating the service account, as it exposes the key to potential compromise<sup>4</sup>.

### NEW QUESTION # 201

You are responsible for creating and modifying the Terraform templates that define your Infrastructure. Because two new engineers will also be working on the same code, you need to define a process and adopt a tool that will prevent you from overwriting each other's code. You also want to ensure that you capture all updates in the latest version. What should you do?

- A. \* Store your code as text files in Google Drive in a defined folder structure that organizes the files.  
\* At the end of each day, confirm that all changes have been captured in the files within the folder structure and create a new .zip archive with a predefined naming convention.  
\* Upload the .zip archive to a versioned Cloud Storage bucket and accept it as the latest version.
- B. \* Store your code in a Git-based version control system  
\* Establish a process that includes code reviews by peers and unit testing to ensure integrity and functionality before integration of code.  
\* Establish a process where the fully integrated code in the repository becomes the latest master version.
- **C. \* Store your code in a Git-based version control system.**  
\* Establish a process that allows developers to merge their own changes at the end of each day.  
\* Package and upload code to a versioned Cloud Storage bucket as the latest master version.
- D. \* Store your code as text files in Google Drive in a defined folder structure that organizes the files.  
\* At the end of each day, confirm that all changes have been captured in the files within the folder structure.  
\* Rename the folder structure with a predefined naming convention that increments the version.

**Answer: C**

### NEW QUESTION # 202

Your product is currently deployed in three Google Cloud Platform (GCP) zones with your users divided between the zones. You can fail over from one zone to another, but it causes a 10-minute service disruption for the affected users. You typically experience a database failure once per quarter and can detect it within five minutes. You are cataloging the reliability risks of a new real-time chat feature for your product. You catalog the following information for each risk:

- \* Mean Time to Detect (MTTD) in minutes
- \* Mean Time to Repair (MTTR) in minutes
- \* Mean Time Between Failure (MTBF) in days
- \* User Impact Percentage

The chat feature requires a new database system that takes twice as long to successfully fail over between zones. You want to account for the risk of the new database failing in one zone. What would be the values for the risk of database failover with the new system?

- A. MTTD: 5  
MTTR: 10  
MTBF: 90  
Impact: 33%
- B. MTTD:5  
MTTR: 20  
MTBF: 90  
Impact: 33%
- C. MTTD:5  
MTTR: 10  
MTBF: 90  
Impact 50%
- D. MTTD:5  
MTTR: 20  
MTBF: 90  
Impact: 50%

**Answer: C**

#### NEW QUESTION # 203

You support a high-traffic web application that runs on Google Cloud Platform (GCP). You need to measure application reliability from a user perspective without making any engineering changes to it. What should you do?

Choose 2 answers

- A. Create new synthetic clients to simulate a user journey using the application.
- B. Analyze the web proxy logs only and capture response time of each request.
- C. Use current and historic Request Logs to trace customer interaction with the application.
- D. Review current application metrics and add new ones as needed.
- E. Modify the code to capture additional information for user interaction.

**Answer: A,C**

#### NEW QUESTION # 204

You are creating a CI/CD pipeline in Cloud Build to build an application container image. The application code is stored in GitHub. Your company requires that production image builds are only run against the main branch and that the change control team approves all pushes to the main branch. You want the image build to be as automated as possible. What should you do?

Choose 2 answers

- A. Configure a branch protection rule for the main branch on the repository
- B. Add the owners file to the Included files filter on the trigger
- C. Create a trigger on the Cloud Build job. Set the repository event setting to Push to a branch
- D. Create a trigger on the Cloud Build job. Set the repository event setting to Pull request
- E. Enable the Approval option on the trigger

**Answer: A,C**

Explanation:

The best options for creating a CI/CD pipeline in Cloud Build to build an application container image and ensuring that production image builds are only run against the main branch and that the change control team approves all pushes to the main branch are to create a trigger on the Cloud Build job, set the repository event setting to Push to a branch, and configure a branch protection rule for the main branch on the repository. A trigger is a resource that starts a build when an event occurs, such as a code change. By

creating a trigger on the Cloud Build job and setting the repository event setting to Push to a branch, you can ensure that the image build is only run when code is pushed to a specific branch, such as the main branch. A branch protection rule is a rule that enforces certain policies on a branch, such as requiring reviews, status checks, or approvals before merging code. By configuring a branch protection rule for the main branch on the repository, you can ensure that the change control team approves all pushes to the main branch.

## NEW QUESTION # 205

.....

With the help of our Professional-Cloud-DevOps-Engineer practice materials, you can successfully pass the actual exam with might redoubled. Our company owns the most popular reputation in this field by providing not only the best ever Professional-Cloud-DevOps-Engineer study guide but also the most efficient customers' servers. We can lead you the best and the fastest way to reach for the certification of Professional-Cloud-DevOps-Engineer Exam Dumps and achieve your desired higher salary by getting a more important position in the company.

**Professional-Cloud-DevOps-Engineer Exam Testking:** <https://www.torrentexam.com/Professional-Cloud-DevOps-Engineer-exam-latest-torrent.html>

We have the experienced experts to compile Professional-Cloud-DevOps-Engineer exam dumps, and they are quite familiar with the exam centre, therefore the Professional-Cloud-DevOps-Engineer learning materials can help you pass the exam successfully, Google Exam Professional-Cloud-DevOps-Engineer Score Available help from our products, Our Professional-Cloud-DevOps-Engineer test braindumps are in the leading position in the editorial market, and our advanced operating system for Professional-Cloud-DevOps-Engineer latest exam torrent has won wide recognition, Professional-Cloud-DevOps-Engineer Exam Testking - Google Cloud Certified - Professional Cloud DevOps Engineer Exam Questions – Best Strategy for Instant Preparation.

Archiving a Database, We are all project managers, Professional-Cloud-DevOps-Engineer both in the general business world and life at large, We have the experienced experts to compile Professional-Cloud-DevOps-Engineer Exam Dumps, and they are quite familiar with the exam centre, therefore the Professional-Cloud-DevOps-Engineer learning materials can help you pass the exam successfully.

## Professional Exam Professional-Cloud-DevOps-Engineer Score & Leading Provider in Qualification Exams & Latest updated Professional-Cloud-DevOps-Engineer Exam Testking

Available help from our products, Our Professional-Cloud-DevOps-Engineer test braindumps are in the leading position in the editorial market, and our advanced operating system for Professional-Cloud-DevOps-Engineer latest exam torrent has won wide recognition.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Questions – Best Strategy for Instant Preparation, Our Professional-Cloud-DevOps-Engineer learning engine is efficient and can help you master the Professional-Cloud-DevOps-Engineer guide torrent in a short time and save your energy.
