[ec2-user@ip-10-0-0-200 ~]$ unzip terraform_${TERRAFORM_VER}_linux_amd64.zip
Archive: terraform_1.5.3_linux_amd64.zip
inflating: terraform
[ec2-user@ip-10-0-0-200 ~]$ terraform version
-bash: terraform: command not found
[ec2-user@ip-10-0-0-200 ~]$
```

You are tasked with deploying FortiGate using Terraform. When you run the terraform version command during the Terraform installation, you get an error message.

What could you do to resolve the command not found error?

- A. You must reinstall Terraform.
- B. You must assign correct permissions to the ec2-user.
- **C. You must move the binary file to the bin directory.**
- D. You must change the directory location to the root directory.

答案： C

解題說明：

<https://github.com/fortinet/fortigate-terraform-deploy>

According to the Terraform documentation for installing Terraform on Linux, you need to download a zip archive that contains a single binary file called terraform. You need to unzip the archive and move the binary file to a directory that is included in your system's PATH environment variable, such as /usr/local/bin. This way, you can run the terraform command from any directory without specifying the full path.

If you do not move the binary file to the bin directory, you will get a command not found error when you try to run the terraform version command, as shown in the screenshot. To fix this error, you need to move the binary file to the bin directory or specify the full path of the binary file when running the command.

問題 #31

An administrator is trying to implement FortiCNP with Microsoft Azure Security integration. However, FortiCNP is not able to extract any cloud integration data from Azure; therefore, real-time cloud security monitoring is not possible.

What is causing this issue?

- A. The administrator enabled the wrong defender plan for servers.
- **B. The Azure account doesn't have the global administrator role.**
- C. The FortiCNP account in Azure has the Storage Blob Data Reader role.
- D. The organization is using a free Azure AD license.

答案： B

問題 #32

You are troubleshooting a FortiGate active-passive SDN connector solution in Microsoft Azure.

Which two mandatory SDN connector settings are required for a successful deployment?

(Choose two.)

- **A. Directory ID**
- **B. Client secret**
- C. Active FortiGate serial number
- D. FortiGate license file

答案： A,B

解題說明:

For an Azure SDN connector to work with FortiGate in an active-passive setup, you must configure:

- * Client secret (used for authentication with Azure AD).
- * Directory ID (the Azure tenant identifier).

問題 #33

How does an administrator secure container environments in Amazon AWS from newly emerged security threats?

- A. Using Amazon AWS_S3-related application control signatures.
- B. Using distributed network-related application control signatures.
- C. Using Amazon AWS-related application control signatures.
- D. Using Docker-related application control signatures.

答案: D

解題說明:

To secure container environments, FortiGate and FortiOS rely on Docker-related application control signatures, which detect and block threats specific to containerized workloads and Docker-based traffic.

問題 #34

Refer to the exhibit. An administrator used the what-if tool to preview the changes to an Azure Bicep file. What will happen if the administrator applies these changes in Azure?

Resource and property changes are indicated with these symbols:

- Delete
- + Create
- ~ Modify

The deployment will update the following scope:

Scope: /subscriptions/./resourceGroups/ExampleGroup

Microsoft.Network/virtualNetworks/vnet-002 [2018-10-01]

- tags.Owner: "Production"

~ properties.subnets: [

+ 0:

name: "subnet001"

properties.addressPrefix: "10.0.0.0/25"

]

Resource changes: 1 to modify.

- A. The vnet-002 VNet will be renamed Production.
- B. The VNet address space will be updated.
- C. A new subnet will be added to vnet-002.
- D. The resulting VNet will have a single subnet.

答案: C

解題說明:

The what-if output shows a modification (~) to the VNet vnet-002 where a new subnet (+ subnet001 with address prefix 10.0.0.0/25) will be created. Applying the changes will therefore add a new subnet to the existing VNet.
