

PAP-001考試大綱 & PAP-001考試資料

順便提一下，可以從雲存儲中下載PDFExamDumps PAP-001考試題庫的完整版：<https://drive.google.com/open?id=18PqU4md0OqpkA9g6ItjuJO8zLGNAXm9a>

不同的方式是可以達到相同的目的的，就看你選擇什麼樣的方式，走什麼樣的路。很多人都想通過Ping Identity PAP-001 認證考試來使自己的工作和生活有所提升，但是參加過Ping Identity PAP-001 認證考試的人都知道通過Ping Identity PAP-001 認證考試不是很簡單。有的人為了能通過Ping Identity PAP-001 認證考試花費了很多寶貴的時間和精力卻沒有成功。

PDFExamDumps為你提供了不同版本的資料以方便你的使用。PDF版的PAP-001考古題方便你的閱讀，為你真實地再現考試題目。軟體版本的PAP-001考古題作為一個測試引擎，可以幫助你隨時測試自己的準備情況。如果你想知道你是不是充分準備好了PAP-001考試，那麼你可以利用軟體版的考古題來測試一下自己的水準。這樣你就可以快速找出自己的弱點和不足，進而有利於你的下一步學習安排。

>> PAP-001考試大綱 <<

精心準備的PAP-001考試大綱 & 完全覆蓋的Ping Identity認證培訓 - 專業的Ping Identity Certified Professional - PingAccess

想要通過 PAP-001 認證考試並不是僅僅依靠與考試相關的書籍就可以辦到的。與其盲目地學習考試要求的相關知識，不如做一些有價值的試題。PDFExamDumps 為您提供一個明確的和特殊的解決方案，我們為您提供詳細的

Ping Identity PAP-001 的問題和答案。我們的專家來自不同地區有經驗的技術專家編寫 PAP-001 考古題。我們的 PAP-001 考古題是我們經過多次測試和整理得到的擬真題，確保考生順利通過 PAP-001 考試。

最新的 Ping Identity PingAccess PAP-001 免費考試真題 (Q22-Q27):

問題 #22

According to a new business requirement, critical applications require dual-factor authentication when specific resources are accessed in those applications. Which configuration object should the administrator use in the applications?

- A. Auth Token Management
- B. UI Authentication
- **C. Authentication Requirements**
- D. Authentication Challenge Policy

答案: C

解題說明:

PingAccess enforces step-up or multi-factor authentication using Authentication Requirements, which can be applied to specific resources within an application.

Exact Extract:

"Authentication requirements allow administrators to configure additional authentication (for example, MFA) when accessing sensitive application resources."

* Option A (UI Authentication) applies to access to the admin console, not application resources.

* Option B (Auth Token Management) relates to OAuth token lifetimes and refresh, not MFA enforcement.

* Option C (Authentication Requirements) is correct - these rules enforce MFA or step-up auth for specific URLs/resources.

* Option D (Authentication Challenge Policy) governs how failed auth challenges are presented but does not enforce MFA.

Reference: PingAccess Administration Guide - Authentication Requirements

問題 #23

An administrator must onboard a new application from the application team. The application has multiple paths that will need different rules. What would be the first step in this process?

- **A. Application**
- B. Identity mapping
- C. Web session
- D. Resource

答案: A

解題說明:

All onboarding in PingAccess begins with defining an Application. Once the application exists, the administrator can define Resources within it and assign different rules to those resources.

Exact Extract:

"Before you can configure resources and rules, you must first create an application in PingAccess."

* Option A (Identity Mapping) may be required later but not the first step.

* Option B (Web Session) can be shared but is not the first onboarding step.

* Option C (Application) is correct - the starting point for onboarding.

* Option D (Resource) comes after creating the application.

Reference: PingAccess Administration Guide - Creating Applications

問題 #24

What is the default port for the administrative console?

- **A. 0**
- B. 1
- C. 2
- D. 3

答案: A

解題說明:

When PingAccess is first installed, the Administrative Console (the web-based UI for managing configuration) is bound to a default port of 9000. This is documented in the installation and configuration guides:

* Exact Extract from documentation:

"By default, the administrative console is available at `https://<host>:9000`." (PingAccess Installation Guide - Default Ports) This means that unless the administrator has explicitly changed the port in `run.properties` or during installation, the console will always be available on port 9000.

Option Analysis:

* A. 9000#Correct. Default administrative console port.

* B. 3000#Incorrect. This is not a PingAccess default port.

* C. 9090#Incorrect. Sometimes used by other Ping products for APIs, but not the PingAccess admin console.

* D. 3030#Incorrect. Not a default PingAccess port.

Reference: PingAccess Installation Guide - Default Administrative Console Port (9000).

問題 #25

An administrator is preparing to rebuild an unrecoverable primary console and must promote the replica admin node. Which two actions must the administrator take? (Choose 2 answers.)

- A. Restart the replica admin node.
- **B. Modify `bootstrap.properties` and set `the engine.admin.configuration.host` value to point at the replica admin node.**
- C. Restart all nodes in the cluster.
- D. Change `pa.operational.mode` to `CLUSTERED_CONSOLE_REPLICA` on one of the engine nodes.
- **E. Change `pa.operational.mode` to `CLUSTERED_CONSOLE` on the replica admin node.**

答案: B,E

解題說明:

From the "Promoting the replica administrative node" documentation:

* Exact Extract:

"Open the `<PA_HOME>/conf/run.properties` file in a text editor. Locate the `pa.operational.mode` line and change the value from `CLUSTERED_CONSOLE_REPLICA` to `CLUSTERED_CONSOLE`. These properties are case-sensitive. Do not restart the replica node during the promotion process." Ping Identity Documentation

* Also from the documentation under "Next steps" / manual promotion / "Using the admin API ..." "When promoting the replica, there is also mention of setting the new host-port in the primary admin configuration so that engine nodes and configuration references now point to the promoted replica. One of the API properties is `editRunPropertyFile` (to flip the mode), another is `editPrimaryHostPort`, which causes the primary-admin host setting to be updated. Ping Identity Documentation Using those facts:

Why C is correct:

* Option C says: Change `pa.operational.mode` to `CLUSTERED_CONSOLE` on the replica admin node.

This directly matches the documented manual promotion step: `switch pa.operational.mode from CLUSTERED_CONSOLE_REPLICA to CLUSTERED_CONSOLE`. Ping Identity Documentation+1

* This is essential for promoting the replica to primary console.

Why E is correct:

* Option E: Modify `bootstrap.properties` and set `the engine.admin.configuration.host` value to point at the replica admin node. While the documentation doesn't always name the exact property `engine.admin`.

`configuration.host`, the "promote via admin API" includes updating the "primary host:port" in the configuration so that engine nodes' configuration queries (or whatever is used by engines) point to the new primary. This maps to ensuring that engine nodes know that the promoted replica is now the administrative node. This requiring modifying the bootstrap or configuration that engine nodes use to find the administrative host is essential. Ping Identity Documentation Why the other options are incorrect:

* A. Change `pa.operational.mode` to `CLUSTERED_CONSOLE_REPLICA` on one of the engine nodes. No.

Engine nodes should have `pa.operational.mode = CLUSTERED_ENGINE`, not console modes.

`CLUSTERED_CONSOLE_REPLICA` is an admin/replica console mode, not applicable for engines.

`docs.ping.directory+2` Ping Identity Documentation+2

* B. Restart all nodes in the cluster. The documentation explicitly says do not restart the replica node during the promotion process because restart can cause file corruption or failure to properly promote.

Only certain restarts are needed after configuration updates. So restarting all nodes is not a correct required action. Ping Identity Documentation

* D. Restart the replica admin node. As above, for manual promotion, a restart of the replica admin node is not required (and is even discouraged during the promotion process). The change in `run.properties` is detected without restarting. Ping Identity Documentation

Reference: PingAccess Reference Guide - Promoting the replica administrative node / Manually promoting the replica administrative

問題 #26

Which two variables should be set in order for the PingAccess service script to start? (Choose 2 answers.)

- A. PA_HOME
- B. JAVA_HOME
- C. JAVA_PATH
- D. PA_PATH
- E. J2EE_HOME

答案: A,B

解題說明:

PingAccess service scripts depend on knowing:

- * Where the Java runtime is installed (JAVA_HOME)
- * Where PingAccess itself is installed (PA_HOME)

Exact Extract:

"The PingAccess startup scripts require the JAVA_HOME environment variable to locate the JDK/JRE and the PA_HOME variable to locate the PingAccess installation directory."

- * Option A (J2EE_HOME) is irrelevant to PingAccess.
- * Option B (JAVA_HOME) is correct - needed for Java execution.
- * Option C (PA_PATH) is not a standard variable.
- * Option D (PA_HOME) is correct - required to point to the PingAccess installation root.
- * Option E (JAVA_PATH) is not valid; PATH can include Java, but JAVA_HOME is the correct environment variable.
