2026 Salesforce Marvelous Data-Con-101: Salesforce Certified Data Cloud Consultant Test Valid

The Data-Con-101 desktop practice exam software and Data-Con-101 web-based practice test is very beneficial for the applicants in their preparation because these Salesforce Data-Con-101 practice exam provides them with the Salesforce Data-Con-101 Actual Test environment. Itcerttest offers Salesforce Data-Con-101 practice tests that are customizable. It means takers can change durations and questions as per their learning needs.

Salesforce Certified Data Cloud Consultant Sample Questions (Q51-Q56):

NEW QUESTION # 51

A rideshare company wants to send an email to customers that provides a year-in-review with five "fun" trip statistics, such as destination, distance traveled, etc. This raw data arrives into Data Cloud and is not aggregated at source.

The company creates a segment of customers that had at least one ride in the last 365 days.

Following best practices, which solution should the consultant recommend in Data Cloud to personalize the content of the email?

- A. Include related attributes in the activation for the last 365 days.
- B. Use a data action to send each ride as an event to Marketing Cloud Engagement, then use AMP script to summarize this data in the email.
- **C. Use a data transform to aggregate the statistics and map them to direct attributes on Individual to include in the activation.**
- D. Create five calculated insights for the activation and add dimension filters.

Answer: C

Explanation:

To personalize the content of the email with five "fun" trip statistics, the consultant should recommend using a data transform to aggregate the statistics and map them to direct attributes on the Individual object for inclusion in the activation. Here's why:

Understanding the Requirement

The rideshare company wants to send personalized emails to customers with aggregated trip statistics (e.g., destination, distance traveled).

The raw data is not aggregated at the source, so it must be processed in Data Cloud.

Why Use a Data Transform?

Aggregating Statistics :

A data transform can aggregate the raw trip data (e.g., summing distances, counting destinations) into meaningful statistics for each customer.

This ensures that the data is summarized and ready for personalization.

Mapping to Direct Attributes :

The aggregated statistics can be mapped to direct attributes on the Individual object.

These attributes can then be included in the activation and used to personalize the email content.

Other Options Are Less Suitable :

B). Create five calculated insights for the activation and add dimension filters : While calculated insights are useful, creating five separate insights is inefficient compared to a single data transform.

C). Use a data action to send each ride as an event to Marketing Cloud Engagement, then use AMP script to summarize this data in the email : This approach is overly complex and shifts the aggregation burden to Marketing Cloud, which is not ideal.

D). Include related attributes in the activation for the last 365 days : Including raw data without aggregation would result in unprocessed information, making personalization difficult.

Steps to Implement the Solution

Step 1: Create a Data Transform

Use a batch or streaming data transform to aggregate the trip statistics (e.g., total distance, unique destinations) for each customer.

Step 2: Map Aggregated Data to Individual Object

Map the aggregated statistics to direct attributes on the Individual object in Data Cloud.

Step 3: Activate the Data

Include the aggregated attributes in the activation for the email campaign.

Step 4: Personalize the Email

Use the activated attributes to personalize the email content with the trip statistics.

Conclusion

Using a data transform to aggregate the statistics and map them to direct attributes on the Individual object is the most efficient and effective solution for personalizing the email content.

NEW QUESTION # 52

What is Data Cloud's primary value to customers?

- A. To create personalized campaigns by listening, understanding, and acting on customer behavior
- B. To create a single source of truth for all anonymous data
- **C. To provide a unified view of a customer and their related data**
- D. To connect all systems with a golden record

Answer: C

Explanation:

Data Cloud is a platform that enables you to activate all your customer data across Salesforce applications and other systems. Data Cloud allows you to create a unified profile of each customer by ingesting, transforming, and linking data from various sources, such as CRM, marketing, commerce, service, and external data providers. Data Cloud also provides insights and analytics on customer

behavior, preferences, and needs, as well as tools to segment, target, and personalize customer interactions. Data Cloud's primary value to customers is to provide a unified view of a customer and their related data, which can help you deliver better customer experiences, increase loyalty, and drive growth. NEW QUESTION # 53

The leadership team at Cumulus Financial has determined that customers who deposited more than \$250,000 in the last five years and are not using advisory services will be the central focus for all new campaigns in the next year.

Which features support this use case?

- A. Streaming insight and segment
- B. Calculated insight and data action
- C. Streaming insight and data action
- D. Calculated insight and segment

Answer: D

Explanation:

Understanding the Use Case:

The leadership team wants to focus on customers who have deposited more than \$250,000 in the last five years and are not using advisory services.

Reference: Salesforce Data Cloud Use Case Documentation

Features Involved:

Calculated Insight: This feature helps derive metrics and values based on existing data. In this case, it can calculate total deposits over the last five years.

Segment: Segmentation allows targeting specific groups of customers based on defined criteria, such as total deposits and usage of advisory services.

Reference: Salesforce Calculated Insights and Segmentation Guide

Steps to Implement:

Create a Calculated Insight:

Navigate to Visual Insights Builder in Salesforce Data Cloud.

Create a new calculated insight to sum deposits for each customer over the last five years.

Create a Segment:

Use the Segment Canvas to create a new segment.

Apply filters to include customers with deposits over \$250,000 and exclude those using advisory services.

Reference: Salesforce Calculated Insights Tutorial and Segment Creation Guide Practical Application:

Example: Identify high-value customers who are not leveraging additional services and target them with personalized marketing campaigns to promote advisory services.

Reference: Salesforce High-Value Customer Segmentation Case Study

NEW QUESTION # 54

Which two dependencies need to be removed prior to disconnecting a data source?

Choose 2 answers

- A. Activation target
- B. Activation
- C. Data stream
- D. Segment

Answer: C,D

Explanation:

Dependencies in Data Cloud:

Before disconnecting a data source, all dependencies must be removed to prevent data integrity issues.

Reference: Salesforce Data Source Management Documentation

Identifying Dependencies:

Segment: Segments using data from the source must be deleted or reassigned.

Data Stream: The data stream must be disconnected, as it directly relies on the data source.

Reference: Salesforce Segment and Data Stream Management Guide

Steps to Remove Dependencies:

Remove Segments:

Navigate to the Segmentation interface in Salesforce Data Cloud.

Identify and delete segments relying on the data source.

Disconnect Data Stream:

Go to the Data Stream settings.

Locate and disconnect the data stream associated with the source.

Reference: Salesforce Segment Deletion and Data Stream Disconnection Tutorial Practical Application:

Example: When preparing to disconnect a legacy CRM system, ensure all segments and data streams using its data are properly removed or migrated.

Reference: Salesforce Data Source Disconnection Best Practices

NEW QUESTION # 55

An organization wants to enable users with the ability to identify and select text attributes from a picklist of options.

Which Data Cloud feature should help with this use case?

- A. Global picklists
- **B. Value suggestion**
- C. Data harmonization
- D. Transformation formulas

Answer: B

Explanation:

Value suggestion is a Data Cloud feature that allows users to see and select the possible values for a text field when creating segment filters. Value suggestion can be enabled or disabled for each data model object (DMO) field in the DMO record home. Value suggestion can help users to identify and select text attributes from a picklist of options, without having to type or remember the exact values. Value suggestion can also reduce errors and improve data quality by ensuring consistent and valid values for the segment filters. References: Use Value Suggestions in Segmentation, Considerations for Selecting Related Attributes

NEW QUESTION # 56

.....

Our Data-Con-101 study quiz is made from various experts for examination situation in recent years in the field of systematic analysis of finishing, meet the demand of the students as much as possible, at the same time have a professional staff to check and review Data-Con-101 practice materials, made the learning of the students enjoy the information of high quality. Due to the variety of examinations, the Data-Con-101 Study Materials are also summarized for different kinds of learning materials, so that students can find the information on Data-Con-101 guide torrent they need quickly.
