Our Sharing-and-Visibility-Architect test torrents convey more important information with less questions and answers and thus make the learning relaxing and efficient.

To become a Salesforce Certified Sharing and Visibility Architect, candidates need to have extensive knowledge of the Salesforce platform, including its security and sharing features. They must also possess a deep understanding of the Salesforce data model, including object relationships, data access, and data sharing rules. Candidates should have several years of experience working with Salesforce and should have a strong understanding of the platform's capabilities and limitations.

### Salesforce Certified Sharing and Visibility Architect Sample Questions (Q61-Q66):

#### NEW QUESTION # 61

Universal Containers has Public Read Only sharing settings on the Opportunity object. What Opportunity access options can the user see while adding account team members to the Account?

- A. Private and Read Only
- B. Private
- C. Read Only and Read/Write
- D. Read Only

**Answer: C**

#### NEW QUESTION # 62

The architect at Universal Containers would like to prevent users from editing encrypted fields. Assuming no customizations are implemented, which two options should the Architect choose to support the requirement?

Choose 2 answers

- A. Apex Triggers
- B. Workflow Rules
- C. Validation Rules
- D. Page Layout settings

**Answer: C,D**

Explanation:

Explanation

Validation rules and page layout settings are two options that the architect can use to prevent users from editing encrypted fields, assuming no customizations are implemented. Validation rules can be used to display an error message when a user tries to edit an encrypted field, and page layout settings can be used to make an encrypted field read-only or hidden from the user interface. Apex triggers and workflow rules are not options to prevent users from editing encrypted fields, as they are executed after the user has already modified the field

#### NEW QUESTION # 63

Universal Containers has selected a small and diverse group of users to review inactive accounts. Given the Private sharing model, a public group was created and made available to this group of users. A sharing rule was created to make inactive Accounts visible to the public group. However, some of these users are reporting they don't see any of the Accounts that were shared with the public group.

What is the underlying issue for these users?

- A. The users have a permission set that only allow Accounts in "Active" status.
- B. The page layout assigned to these users is different than the Account owner.
- **C. The users are in profiles that have no access to the Account object.**
- D. The Accounts are owned by users higher in the role hierarchy.

**Answer: C**

Explanation:

Explanation

The most likely reason why some users cannot see the accounts shared with the public group is that their profiles do not have access to the account object. Sharing rules and public groups cannot grant access to an object that is not enabled by the profile. Option A is incorrect, since permission sets do not control record status. Option B is incorrect, since the role hierarchy does not affect sharing rules. Option D is incorrect, since page layouts do not affect visibility

#### NEW QUESTION # 64

A junior account manager owns an account and creates a new opportunity to manage a complex deal. She needs the help of the product specialist and solution engineer. Given the size of this deal, she knows the account is likely to be reassigned to a senior account manager in the near future.

What is the optimal way for the junior account manager to share the opportunity, given the private sharing model?

- A. Manual share on the opportunity
- B. Manual share on the account
- **C. Opportunity Team**

**Answer: C**

Explanation:

The Opportunity Team feature is the most effective way to collaborate on an opportunity in a private sharing model. By adding the product specialist and solution engineer to the Opportunity Team, the junior account manager can share specific permissions for the opportunity without altering ownership. Additionally, Opportunity Team settings remain intact even if the account ownership changes to a senior manager.

\* Option A: Manual sharing is less flexible and requires re-sharing if the account is reassigned.

\* Option B: Sharing the account doesn't ensure access to opportunities since sharing is record-specific in a private model.

\* Option C (Correct): Opportunity Teams allow role-based collaboration and persistent sharing, ensuring access is unaffected by ownership changes.

References:

\* Opportunity Team Overview

#### NEW QUESTION # 65

Universal Containers (UC) has implemented Service Cloud. There is a flag field on the case object that marks a case as (Sensitive). UC requested that this flag can be viewed by all users who have access to the case but only be edited by the assigned case assessor. The case assessor is a lookup field on the case object. How can an architect achieve this requirement?

- A. Object Permissions.
- B. Field-level security
- **C. Custom Lightning Component.**
- D. Permission Set.

**Answer: C**

#### NEW QUESTION # 66

.....

It is our aspiration to help candidates get certification in their first try with our latest Sharing-and-Visibility-Architect exam prep and valid pass guide. We know the difficulty of Sharing-and-Visibility-Architect real exam so our IT experts written the best quality exam answers for our customers who didn't get good result. By using our Sharing-and-Visibility-Architect pass review, you will grasp the

overall key points of the test content and solve the difficult questions easier.
