"NotAuthorizedOrNotFound: You are not authorized to perform this action." The administrator verifies that the instance has Internet access and can reach OCI endpoints.

What then could be causing the issue?

- A. The bucket name is already in use, causing a conflict.
- B. The policy is written at the root compartment instead of the production compartment.
- **C. The instance is not part of any Dynamic Group or the matching rule is incorrect.**
- D. The instance is using the wrong OCI CLI authentication method.

答案：C

- **A. Sensitive data discovery**
- B. Security assessment
- C. Data auditing
- D. Data encryption

答案：A

What is the secure way to access OCI services with OCI Identity and Access Management (IAM)?

- A. Create an OCI IAM policy with appropriate permissions to access the required OCI services and assign the policy to the on-premises Linux server."
- B. Create a new OCI IAM user associated with a dynamic group and a policy that grants the desired permissions to OCI services. Add the on-premises Linux server in the dynamic group.
- C. Create a new OCI IAM user, add the user to a group associated with a policy that grants the desired permissions to OCI services. In the on-premises Linux server, add the user name and password to a file used by Node.js authentication.
- **D. Create a new OCI IAM user, add the user to a group associated with a policy that grants the desired permissions to OCI services. In the on-premises Linux server, generate the keypair used for signing API requests and upload the public key to the IAM user.**

Which statement best describes the role of an OCI Bastion in securing access to these private compute instances?

- A. It creates a secure, publicly accessible entry point to access target resources in a private subnet."
- B. It acts as a firewall, blocking any external access to the private compute instance.
