And we will give you the most professional suggeston on the 100-160 practice prep with kind and considerate manner in 24/7 online.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q132-Q137):

NEW QUESTION # 132

Which network infrastructure component allows for the translation of domain names to IP addresses?

- A. Router

- B. DNS server
- C. Firewall
- D. DHCP server

Answer: B

Explanation:

DNS (Domain Name System) is a network infrastructure component that translates domain names (e.g., www.example.com) into their corresponding IP addresses (e.g., 192.168.1.1). DNS servers maintain a distributed database that maps domain names to IP addresses, allowing users to access websites and other resources using easy-to-remember names instead of complex IP addresses.

NEW QUESTION # 133

What is the main difference between a public and a private network?

- A. Public networks use public IP addresses, while private networks use private IP addresses
- B. Private networks are more expensive to set up than public networks
- C. Public networks are secured, while private networks are not
- D. Private networks are accessible to the general public, while public networks are not

Answer: A

Explanation:

The main difference between a public network and a private network lies in the IP addressing scheme. Public networks use public IP addresses, provided by ISPs, to route traffic over the internet. Private networks, on the other hand, use private IP addresses, typically reserved IP ranges (e.g., 192.168.x.x or 10.x.x.x), for local communication within a network.

NEW QUESTION # 134

Which of the following is NOT a benefit of maintaining a hardware inventory?

- A. Facilitates asset management and procurement
- B. Simplifies troubleshooting and technical support
- C. Eliminates the need for software updates and patching
- D. Enhances the effectiveness of software inventory management

Answer: C

Explanation:

Maintaining a hardware inventory provides multiple benefits, including simplifying troubleshooting, facilitating asset management, and enhancing software inventory management. However, it does not eliminate the need for software updates and patching, as those are separate activities required to maintain the security and functionality of software components.

NEW QUESTION # 135

What is the primary goal of the Cyber Kill Chain framework?

- A. To analyze the impacts of cyberattacks after they occur
- B. To detect and respond to cyberattacks early
- C. To prevent cyberattacks from occurring
- D. To attribute cyberattacks to a specific threat actor

Answer: B

Explanation:

The Cyber Kill Chain framework is a methodology used to understand and respond to cyberattacks. Its primary goal is to identify and interrupt the stages of a cyberattack as early as possible, allowing for proactive detection, response, and mitigation of the attack.

NEW QUESTION # 136

Which of the following is an example of a preventive control?

- A. Intrusion detection system
- B. Incident response plan
- C. User access log
- **D. Firewall**

Answer: D

Explanation:

A firewall is a preventive control that helps to protect a network by acting as a barrier between internal and external networks, monitoring and controlling incoming and outgoing traffic based on predetermined security rules. It prevents unauthorized access and defends against network-based attacks.

NEW QUESTION # 137

.....

Useful 100-160 exam prep is subservient to your development. To add up your interests and simplify some difficult points, our experts try their best to design our 100-160 training material and help you understand the 100-160 study guide better. And our experts generalize the knowledge of the exam into our products showing in three versions: the PDF, the Software and the APP online. You can choose your most desirable way to practice our 100-160 Preparation engine on the daily basis.
