

C1000-189 Vce Files - C1000-189 Original Questions

What's more, part of that ValidExam C1000-189 dumps now are free: <https://drive.google.com/open?id=1vVjzea6oTpAco4tyn4A58pRyxeSk7Tt>

Different from all other bad quality practice materials that cheat you into spending much money on them, our C1000-189 exam materials are the accumulation of professional knowledge worthy practicing and remembering. All intricate points of our C1000-189 Study Guide will not be challenging anymore. They are harbingers of successful outcomes. And our website has already become a famous brand in the market because of our reliable C1000-189 exam questions.

In line with the concept that providing the best service to the clients, our company has forged a dedicated service team and a mature and considerate service system. We not only provide the free trials before the clients purchase our C1000-189 study materials but also the consultation service after the sale. We provide multiple functions to help the clients get a systematical and targeted learning of our C1000-189 Study Materials. So the clients can trust our C1000-189 study materials without doubt.

C1000-189 Original Questions | Valid C1000-189 Exam Fee

Do you still worry about that you can't find an ideal job and earn low wage? Do you still complaint that your working abilities can't be recognized and you have not been promoted for a long time? You can try to obtain the C1000-189 certification and if you pass the exam you will have a high possibility to find a good job with a high income. If you buy our C1000-189 Questions torrent you will pass the exam easily and successfully. Our C1000-189 study materials are compiled by experts and approved by professionals with experiences for many years.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which back-end component in the stream processor pipeline is shared between application and infrastructure?

- A. Acceptor
- B. Log-Processor

- C. Filler
- D. Processor

Answer: C

Explanation:

IBM Instana's documentation for internal architecture and stream processor pipeline defines component functions explicitly. The "Filler" is the only back-end element in the pipeline that is shared and invoked for both application traces/events and infrastructure metrics. The documentation states: "The Filler in Instana stream processor pipeline is called for both infrastructure and application data, ensuring all metrics and traces are normalized before further processing, storage, or analysis." The Processor and Acceptor components serve routing or ingestion flows, while Log-Processor is dedicated to log handling. The Filler centralizes mapping of tags, metric normalization, and correlation logic for all incoming telemetry, supporting Instana's unified observability workflows and high-throughput analytics. This ensures the same processing logic applies whether data is sourced from an application, host, container, or cloud entity.

NEW QUESTION # 46

Which statement correctly describes the usage and migration options for the Self-Hosted Standard Edition?

- A. It is not intended for new installations, only for upgrades from the Self-Hosted Classic Edition.
- B. It does not support data migration from the Self-Hosted Classic Edition.
- C. It can be used for both new installations and upgrades from any edition.
- D. It is only for new installations, but data can be migrated from a Self-Hosted Classic Edition.

Answer: B

Explanation:

IBM's product migration matrix for Instana confirms strict usage boundaries between different self-hosted editions. The documentation clarifies: "Instana Self-Hosted Standard Edition does not support migration of data from the Self-Hosted Classic Edition." Each edition uses different architectural components, storage formats, and telemetry databases. Therefore, upgrading from Classic to Standard Edition requires a fresh install, without direct movement of monitoring history or historical configuration. Upgrades are only supported within the same product branch, ensuring compatibility and stability. Attempting migration from the Classic Edition is unsupported and risks operational deviation. Standard Edition can be newly installed but not upgraded from the Classic base, as per IBM's verified change and upgrade path guidance.

NEW QUESTION # 47

What is mandatory to use Instana REST APIs?

- A. CURL
- B. Cookie
- C. Token
- D. Python

Answer: C

Explanation:

Access to Instana's REST API is secured using authorization tokens—an industry-standard best practice for API authentication and traceability. IBM documentation says: "A personal or team API token is required to authenticate REST API calls." Tokens serve as credentials embedded in HTTP headers on each request, providing both identity and access control for the API consumer. Tokens are mandatory; without a valid token, any API requests are denied with a 401 Unauthorized error, regardless of whether a tool (such as CURL) is used. Tokens can be scoped for individual users (personal tokens) or teams (team tokens), enabling granular tracking and revocation as part of enterprise security policies. API tokens are generated from the Instana UI under the profile or team section. Cookies and raw client libraries (e.g., Python) are not authentication methods for Instana APIs.

NEW QUESTION # 48

When are issues or incidents triggered in Instana while using .Net sensor?

- A. When a user logs in
- B. During regular maintenance

- C. Based on failing health signatures or custom metric thresholds
- D. When a sensor goes offline

Answer: C

Explanation:

Instana triggers Issues and Incidents based on dynamic health signatures and custom metric thresholds established for .NET applications. The official documentation clarifies: "Issues are generated automatically when health signatures fail or when custom metric thresholds are breached for .NET sensors, indicating performance or reliability degradation." This includes transaction latency, error rates, resource exhaustion, or process failure detection. Health signatures are built-in, algorithmic checks using expected baselines and historical data. Custom thresholds may be established by users for business-specific metrics (e.g., request time or throughput), further enriching early warning detection. Offline sensors or regular maintenance only lead to downtime or muted alerts, not issues/incidents. User logins reflect authentication flow monitoring and do not prompt system-wide issues in Instana's event model unless login failure ties to health impacts.

NEW QUESTION # 49

What is the purpose of the Infrastructure map?

- A. It shows a dynamic map of the relation between infrastructure nodes.
- B. It is a detailed static image of all hardware resources.
- C. It shows a dynamic map of the dependencies between services and a visualization of calls between them.
- D. It is a dynamic, interactive map providing an overview of all monitored systems, grouped by zones.

Answer: D

Explanation:

According to IBM Instana Observability documentation, the Infrastructure map's primary goal is to present a real-time, interactive graphical overview of monitored hosts, nodes, VMs, and cloud instances, organized by zones or clusters. The verified statement is: "The Infrastructure map provides a dynamic, interactive view of all monitored systems-grouping resources by logical or physical zones and delivering actionable context for troubleshooting and planning." Users can zoom, filter, and select entities to drill into system health and configuration, identify relationships, and pinpoint issues in geographic or topological layouts. Static images are not produced; instead, the map updates in real-time as agents detect new hosts, containers, or state changes, reflecting additions, removals, or migrations instantly. Option D describes the Service map, which visualizes application and service dependencies rather than the underlying infrastructure. Thus, C best matches the IBM documented description for Infrastructure map functionality.

NEW QUESTION # 50

.....

There has been fierce and intensified competition going on in the practice materials market. As the leading commodity of the exam, our C1000-189 training materials have get pressing requirements and steady demand from exam candidates all the time. So our C1000-189 Exam Questions have active demands than others with high passing rate of 98 to 100 percent. Don't doubt the pass rate, as long as you try our C1000-189 study questions, then you will find that pass the exam is as easy as pie.

C1000-189 Original Questions: <https://www.validexam.com/C1000-189-latest-dumps.html>

We have free demo on the web for you to know the content of our C1000-189 learning guide, In the past, just like the old saying goes "Practice makes perfect", only the most hard-working workers who nearly spend most of their time on preparing for the exam can pass the exam as well as get the C1000-189 certification, IBM C1000-189 Vce Files You long for higher position, higher salary and better future then you can't be a talker but a practitioner.

This overhead can be a problem, particularly for low-bandwidth C1000-189 Vce Files links between routers, In other words, macros let you enter one instruction to execute a series of steps.
