

Test AWS-Developer Cram Pdf - AWS-Developer Practice Test Online

DVA-C01:
AWS CERTIFIED DEVELOPER / ASSOCIATE

PRACTICE TEST

What's more, part of that ExamBoosts AWS-Developer dumps now are free: <https://drive.google.com/open?id=15wqZzc-GtXhmOSN6k3HXxntIEG-3CJvZ>

The passing rate of our AWS-Developer training quiz is high as 98% to 100% and the hit rate is also high. Our professional expert team seizes the focus of the exam and chooses the most important questions and answers which has simplified the important information and follow the latest trend to make the client learn easily and efficiently on our AWS-Developer Study Guide. YOU can also free download the demos of our AWS-Developer learning materials to have a check.

Our company is a professional certification exam materials provider, we have occupied in this field for over ten years, and we have rich experiences in offering exam materials. AWS-Developer exam materials are edited by professional experts, and they possess the skilled knowledge for the exam, therefore the quality can be guaranteed. In addition, we are pass guarantee and money guarantee for AWS-Developer Exam Materials, if you fail to pass the exam, we will give you refund. We provide you with free update for 365 days for you after purchasing, and the update version for AWS-Developer training materials will be sent to your email automatically.

AWS-Developer Practice Test Online, AWS-Developer Exam Labs

Our company is a multinational company with sales and after-sale service of AWS-Developer exam torrent compiling departments throughout the world. In addition, our company has become the top-notch one in the fields, therefore, if you are preparing for the exam in order to get the related AWS-Developer certification, then the AWS-Developer Exam Question compiled by our company is your solid choice. All employees worldwide in our company operate under a common mission: to be the best global supplier of electronic AWS-Developer exam torrent for our customers to pass the AWS-Developer exam.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q226-Q231):

NEW QUESTION # 226

A developer has designed a customer-facing application that is running on an Amazon EC2 instance. The application logs every request made to it. The application usually runs seamlessly, but a spike in traffic generates several logs that cause the disk to fill up and eventually run out of memory. Company policy requires logs to be centralized for analysis. Which long-term solution should the developer employ to prevent the issue from reoccurring?

- A. Create an Amazon EventBridge (Amazon CloudWatch Events) rule to pull the logs from the instance. Configure the rule to delete the logs they have been pulled.
- B. Enable AWS Auto Scaling on Amazon Elastic Block Store (Amazon EBS) to automatically add volume to the instance when it reaches a specified threshold.
- C. Install the Amazon CloudWatch agent on the instance to send the logs to CloudWatch. Delete the logs from the instance once they are sent to CloudWatch.
- D. Enable AWS Auto Scaling on Amazon Elastic Block Store (Amazon EBS) to automatically add volumes to the instance when it reaches a specified threshold.

Answer: A

NEW QUESTION # 227

An organization has created multiple components of a single application for compartmentalization. Currently all the components are hosted on a single EC2 instance. Due to security reasons the organization wants to implement two separate VPCs for the separate modules although it is already using VPC. How can the organization achieve this with a single instance?

- A. Create a VPC instance which will have both the ACL and the security group attached to it and have separate rules for each IP address.
- B. You have to launch two instances each in a separate subnet and allow VPC peering for a single IP.
- C. Create a VPC instance which will have multiple subnets attached to it and each will have a separate IP address.
- D. Create a VPC instance which will have multiple network interfaces with multiple elastic IP addresses.

Answer: D

Explanation:

A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. It enables the user to launch AWS resources into a virtual network that the user has defined. With VPC the user can specify multiple private IP addresses for his instances.

The number of network interfaces and private IP addresses that a user can specify for an instance depends on the instance type. With each network interface the organization can assign an EIP. This scenario helps when the user wants to host multiple websites on a single EC2 instance by using multiple SSL certificates on a single server and associating each certificate with a specific EIP address. It also helps in scenarios for operating network appliances, such as firewalls or load balancers that have multiple private IP addresses for each network interface.

NEW QUESTION # 228

In DynamoDB, if you create a table and request 10 units of write capacity and 200 units of read capacity of provisioned throughput, how much would you be charged in US East (Northern Virginia) Region?

- A. \$0.05 per hour
- B. \$0.15 per hour
- C. \$0.10 per hour
- D. \$0.03 per hour

Answer: A

Explanation:

To understand pricing in DynamoDB, consider the following example. If you create a table and request 10 units of write capacity and 200 units of read capacity of provisioned throughput, you would be charged:

$\$0.01 + (4 \times \$0.01) = \$0.05$ per hour

NEW QUESTION # 229

A developer is creating a script to automate the deployment process for a serverless application. The developer wants to use an existing AWS Serverless Application Model (AWS SAM) template for the application. What should the developer use for the project? (Choose two.)

- A. Create a ZIP package locally and call `aws serverlessrepo create-application` to create the application.
- **B. Call `aws s3 cp` to upload the AWS SAM template to Amazon S3. Call `aws lambda update-function-code` to create the application.**
- C. Call `aws cloudformation package` to create the deployment package. Call `aws cloudformation deploy` to deploy the package afterward.
- D. Call `aws sam package` to create the deployment package. Call `aws sam deploy` to deploy the package afterward.
- **E. Create a ZIP package and upload it to Amazon S3. Call `aws cloudformation create-stack` to create the application.**

Answer: B,E

Explanation:

NEW QUESTION # 230

A web application is designed to allow new users to create accounts using their email addresses. The application will store attributes for each user, and is expecting millions of user to sign up.

What should the Developer implement to achieve the design goals?

- A. AWS Mobile Hub cloud logic
- B. AWS Mobile Hub user data storage
- **C. Amazon Cognito user pools**
- D. Amazon Cognito Sync

Answer: C
