#### NEW QUESTION # 135

You have a Microsoft SharePoint Online site named Site1 that contains a document library. The library contains more than 1,000 documents. Some of the documents are job applicant resumes. All the documents are in the English language.

You plan to apply a sensitivity label automatically to any document identified as a resume. Only documents that contain work experience, education, and accomplishments must be labeled automatically.

You need to identify and categorize the resumes. The solution must minimize administrative effort.

What should you include in the solution?

- A. an exact data match (EDM) classifier
- B. a keyword dictionary
- C. a trainable classifier
- D. a function

**Answer: C**

Explanation:

Since you need to automatically apply a sensitivity label to resumes based on their content and structure (work experience, education, accomplishments), a trainable classifier is the best choice.

Trainable classifiers use machine learning to identify unstructured data, such as resumes, contracts, or legal documents. Instead of relying on predefined patterns (like keywords or regular expressions), a trainable classifier learns from sample documents and can accurately identify resumes even if they are formatted differently.

Final Approach:

\*Train a trainable classifier using sample resumes.

\*Deploy the classifier in Microsoft Purview.

\*Configure a sensitivity label to be automatically applied when a document matches the classifier.

#### NEW QUESTION # 136

You are creating a DLP policy named Policy1 that will be applied to the locations as shown in the following exhibit.

## Choose where to apply the policy

We'll apply the policy to data that's stored in the locations you choose.

① Protecting sensitive info in on-premises repositories (SharePoint sites and file shares) is now in preview. Note that there are prerequisite steps needed to support this new capability. [Learn more about the prerequisites](#).
