BTW, DOWNLOAD part of FreeDumps AZ-104 dumps from Cloud Storage: <https://drive.google.com/open?id=1wkcZyEQtqYtz89W5kZ8i932FbP12YW0m>

Our AZ-104 vce brandumps are the best preparation materials for the certification exam and the guarantee of clearing exam quickly with less effort. You can find latest AZ-104 test answers and questions in our pass guide and the detailed explanations will help you understand the content easier. Our experts check the updating of AZ-104 free demo to ensure the accuracy of our dumps and create the pass guide based on the latest information.

To be eligible for the exam, candidates need to have a solid understanding of Azure services, such as virtual machines, storage accounts, and Azure Active Directory. They should also have experience with Azure portal, Azure PowerShell, and Azure CLI. Candidates who pass the AZ-104 Certification Exam will demonstrate their ability to manage Azure resources, implement and manage storage, configure and manage virtual networks, and monitor and backup Azure resources.

Microsoft AZ-104 exam is an essential certification for IT professionals who want to work with Azure. It covers a wide range of topics related to Azure Administration and is designed to test your skills and knowledge of Azure. By passing the exam, you will become a certified Microsoft Azure Administrator and will be qualified to work with Azure in a professional capacity. With the increasing demand for cloud professionals, this certification will help you stand out in the job market and advance your career.

AZ-104 New Test Materials | Reliable AZ-104 Test Question

Success in the AZ-104 test of the Microsoft AZ-104 credential is essential in today's industry to verify the skills and get well-paying jobs in reputed firms around the whole globe. Earning the Microsoft Azure Administrator Exam AZ-104 Certification sharpens your skills and helps you to accelerate your career in today's cut throat competition in the Microsoft industry. It is not easy to clear the AZ-104 exam on the maiden attempt.

Microsoft Azure Administrator Exam Sample Questions (Q191-Q196):

NEW QUESTION # 191

You have an Azure subscription that contains the resource groups shown in the following table.

Name	Location
RG1	West US
RG2	East US

RG1 contains the resources shown in the following table.

Name	Type	Location
storage1	Storage Account	West US
VNET1	Virtual network	West US

Answer Area

 Microsoft

Statements	Yes	No
You can move storage1 to RG2.	<input type="radio"/>	<input type="radio"/>
You can move NIC1 to RG2.	<input type="radio"/>	<input type="radio"/>
If you move IP2 to RG1, the location of IP2 will change.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area

 Microsoft

Statements	Yes	No
You can move storage1 to RG2.	<input checked="" type="radio"/>	<input type="radio"/>
You can move NIC1 to RG2.	<input type="radio"/>	<input checked="" type="radio"/>
If you move IP2 to RG1, the location of IP2 will change.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION # 192

You have an Azure subscription that has a Recovery Services vault named Vault1. The subscription contains the virtual machines shown in the following table:

Name	Operating system	Auto-shutdown
VM1	Windows Server 2012 R2	Off
VM2	Windows Server 2016	19:00
VM3	Ubuntu Server 18.04 LTS	Off
VM4	Windows 10	19:00

You plan to schedule backups to occur every night at 23:00.

Which virtual machines can you back up by using Azure Backup?

- A. VM1 only
- B. VM1, VM2, VM3 and VM4
- C. VM1 and VM3 only
- D. VM1 and VM2 only

Answer: B

Explanation:

Azure Backup supports backup of 64-bit Windows server operating system from Windows Server 2008.

Azure Backup supports backup of 64-bit Windows 10 operating system.

Azure Backup supports backup of 64-bit Ubuntu Server operating system from Ubuntu 12.04.

Azure Backup supports backup of VM that are shutdown or offline.

Reference:

<https://docs.microsoft.com/en-us/azure/backup/backup-support-matrix-iaas>

<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/endorsed-distros>

NEW QUESTION # 193

You have an Azure subscription that contains the virtual machines shown in the following table.

Name	Operating system	Connects to
VM1	Windows Server 2019	Subnet1
VM2	Windows Server 2019	Subnet2

VM1 and VM2 use public IP addresses. From Windows Server 2019 on VM1 and VM2, you allow inbound Remote Desktop connections.

Subnet1 and Subnet2 are in a virtual network named VNET1.

The subscription contains two network security groups (NSGs) named NSG1 and NSG2. NSG1 uses only the default rules.

NSG2 uses the default and the following custom incoming rule:

- * Priority: 100
- * Name: Rule1
- * Port: 3389
- * Protocol: TCP
- * Source: Any
- * Destination: Any
- * Action: Allow

NSG1 connects to Subnet1. NSG2 connects to the network interface of VM2.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Statements	Yes	No
From the internet, you can connect to VM1 by using Remote Desktop.	<input type="radio"/>	<input type="radio"/>
From the internet, you can connect to VM2 by using Remote Desktop.	<input type="radio"/>	<input type="radio"/>
From VM1, you can connect to VM2 by using Remote Desktop.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
From the internet, you can connect to VM1 by using Remote Desktop.	<input type="radio"/>	<input checked="" type="radio"/>
From the internet, you can connect to VM2 by using Remote Desktop.	<input checked="" type="radio"/>	<input type="radio"/>
From VM1, you can connect to VM2 by using Remote Desktop.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation

Statements	Yes	No
From the internet, you can connect to VM1 by using Remote Desktop.	<input type="radio"/>	<input checked="" type="radio"/>
From the internet, you can connect to VM2 by using Remote Desktop.	<input checked="" type="radio"/>	<input type="radio"/>
From VM1, you can connect to VM2 by using Remote Desktop.	<input checked="" type="radio"/>	<input type="radio"/>

Box 1: No

The default port for RDP is TCP port 3389. A rule to permit RDP traffic must be created automatically when you create your VM.

Box 2: Yes

NSG2 will allow this.

Box 3: Yes

NSG2 will allow this.

Note on NSG-Subnet1: Azure routes network traffic between all subnets in a virtual network, by default.

NEW QUESTION # 194

SIMULATION

Overview

The following section of the exam is a lab. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

To start the lab

You may start the lab by clicking the Next button.

You recently created a virtual machine named Web01.

You need to attach a new 80-GB standard data disk named Web01-Disk1 to Web01.

What should you do from the Azure portal?

- A. See below explanation

Answer: A

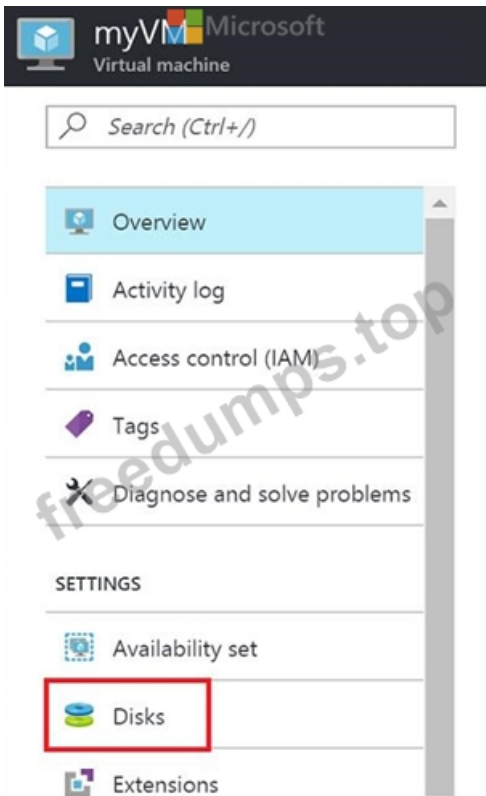

Explanation:

Add a data disk

Step 1. In the Azure portal, from the menu on the left, select Virtual machines.

Step 2. Select the Web01 virtual machine from the list.

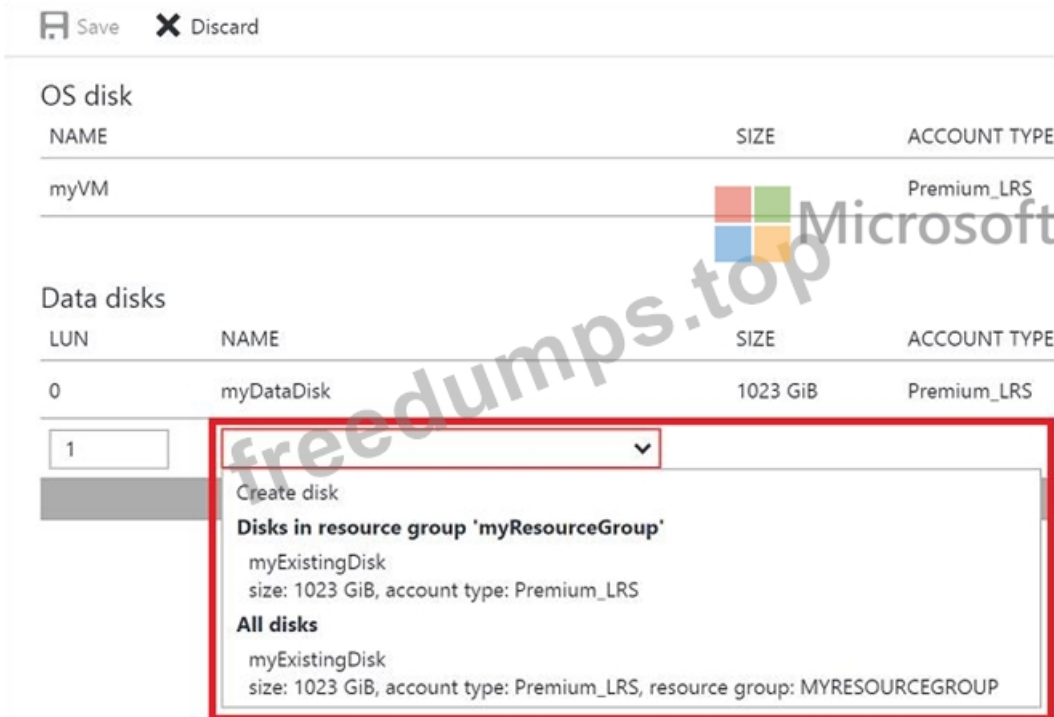

Step 3. On the Virtual machine page, , in Essentials, select Disks.

Step 4. On the Disks page, select the Web01-Disk1 from the list of existing disks.

Step 5. In the Disks pane, click + Add data disk.

Step 6. Click the drop-down menu for Name to view a list of existing managed disks accessible to your Azure subscription. Select the managed disk Web01-Disk1 to attach:

<https://docs.microsoft.com/en-us/azure/virtual-machines/linux/attach-disk-portal>

NEW QUESTION # 195

You have an Azure subscription that contains the storage accounts shown in the following table.

Name	Kind	Performance	Replication	Access tier
Storage1	Storage (general purpose v1)	Premium	Geo-redundant storage (GRS)	None
Storage2	StorageV2 (general purpose v2)	Standard	Locally-redundant storage (LRS)	Cool
Storage3	StorageV2 (general purpose v2)	Premium	Read-access geo-redundant storage (RA-GRS)	Hot
Storage4	BlobStorage	Standard	Locally-redundant storage (LRS)	Hot

You need to identify which storage account can be converted to zone-redundant storage (ZRS) replication by requesting a live migration from Azure support.

What should you identify?

- A. Storage4
- B. Storage3
- C. Storage2
- D. Storage1

Answer: C

Explanation:

ZRS currently supports standard general-purpose v2, FileStorage and BlockBlobStorage storage account types.

Incorrect Answers:

A, not C: Live migration is supported only for storage accounts that use LRS replication. If your account uses GRS or RA-GRS, then you need to first change your account's replication type to LRS before proceeding. This intermediary step removes the secondary endpoint provided by GRS/RA-GRS.

Also, only standard storage account types support live migration. Premium storage accounts must be migrated manually.

D: ZRS currently supports standard general-purpose v2, FileStorage and BlockBlobStorage storage account types.
