But if you want to get a Salesforce certification, you must pass the exam.

### Salesforce Certified B2C Commerce Architect Sample Questions (Q39-Q44):

#### NEW QUESTION # 39

a client uses an external marketing tool to manage promotions and coupons for its multiple brands. They currently have only one brand on B2C Commerce and they get Import-ready feeds created by this tool on an SFTP location.

The marketing team completes the data preparation by the end of the work day.

How should the Architect handle this import?

- A. Create a job and define three steps: one custom step to download the files from SFTP, and two standard steps to import the promotion and coupons.
- B. Create a Job and define three custom steps: download the files from SFTP, import promotions, import coupons
- C. Create a Job and define three steps: one step uses ExecuteScriptModule to download the files from SFTP, end two

standard steps to Import the promotion end coupons.

- D. Create a Job and define three steps: one standard step to download files from sftp and two steps that use Execute Script Module to import the promotion end coupons.

**Answer: A**

Explanation:

To handle the import of promotion and coupon data from an SFTP location, the best approach is to create a job consisting of three steps as described in option C. The first step involves a custom script to download the files from the SFTP server-this is necessary because file retrieval from external servers typically requires specific connectivity and security configurations that are best handled in a custom-coded step. The subsequent two steps would utilize standard Salesforce B2C Commerce job steps to import the downloaded promotion and coupon data into the platform. This method ensures that the data flow is streamlined, from retrieval through to integration into the Commerce platform.

#### NEW QUESTION # 40

The Client plans to deploy a new payment provider and Order Management System on its existing B2C Commerce website. They have asked an Architect to advise which environment it should use to conduct load testing of its new integrations.

Which environment should be used as the ideal environment for this kind of load test?

- **A. The Development Instance of the existing Realm.**
- B. The Development Instance of a rental Realm.
- C. The Production Instance of a rental Realm.
- D. The Production instance of the existing Realm.

**Answer: A**

Explanation:

For conducting load testing of new integrations with a payment provider and Order Management System, it is recommended to use the Development Instance of the existing Realm (Option B). This approach ensures that any issues found during testing do not affect the live production environment, while still allowing tests to be conducted in an environment that mirrors the production setup as closely as possible. This minimizes the risk of disruptive downtime or customer-facing errors when the integration goes live.

#### NEW QUESTION # 41

During implementation, the team found that there is a notification controller exposed for an external service that marks the order as paid when notification is received. The notification URL is sent to the service together with the payment request and contains only the URL with orderID as the parameter.

What should the Architect recommend to the team in order to prevent the unauthorized usage of the controller to mark the orders as paid?

- **A. Add an order token in the callback URL and match the token against the one stored on the order.**
- B. Add a session attribute and validate it on the callback.
- C. Add HTTPS restriction to the controller start node.
- D. Add a customer number in the callback URL and match the customer number against the one stored on the order.

**Answer: A**

Explanation:

To enhance the security of the notification controller exposed for marking orders as paid, the recommended approach is to add an order-specific token to the callback URL (Answer C). This token should be verified against a stored value on the order to ensure the authenticity and integrity of the payment notification. This method prevents unauthorized use of the controller, as only callbacks containing the correct, order-specific token would be allowed to mark orders as paid. This strategy is essential in maintaining secure and reliable transaction processes within Salesforce B2C Commerce.

#### NEW QUESTION # 42

The Client has just acquired a new brand and wants to integrate the new brand's current e-commerce site into a current realm as a new site. The acquisition has its own Enterprise Resource Planning (ERP) system for product data and inventory. The new site will use the existing realm's Order Management System (OMS) and Customer Relationship Management (CRM) system.

What two requirements does the Architect need to keep in mind when creating the technical specification document?

Choose 2 answers

- A. A new customer export Job must be created to export customers.
- **B. A new product Import Job must be created to manage products.**
- **C. A new inventory Import Job must be created to manage inventory.**
- D. A new order export job must be created to export orders.

**Answer: B,C**

Explanation:

When integrating a new brand's ecommerce site into an existing realm, the architect needs to ensure that product data and inventory from the new brand's Enterprise Resource Planning (ERP) system are correctly managed within the realm. Therefore, creating new import jobs for products (Answer B) and inventory (Answer C) is essential. These import jobs will facilitate the synchronization of the new brand's product catalog and inventory levels with the existing Order Management System (OMS) and Customer Relationship Management (CRM) systems of the realm. Such integration is crucial for maintaining up-to-date product and inventory information across the systems, ensuring seamless operations and data consistency.

### NEW QUESTION # 43

While validating a LINK Cartridge for inclusion into the solution, an Architect notices that the UNK cartridge documentation requires the Architect to add a script node to a Pipeline in the storefront cartridge. The script is also a valid CommonJS module. Which approach can the Architect use to Integrate this cartridge into a site that uses Controllers only?

- A. Add the script that is required via an import\$script statement in the Controller, add the appropriate arguments, and execute the correct method.
- B. Copy and paste the script that is required directly into the Controller, add the appropriate arguments, then execute the correct method
- **C. Add the script that is required via a require statement in the Controller, add the appropriate arguments, and execute the correct method.**
- D. Add the script that is required via a Module, exports statement in the Controller add the appropriate arguments, and execute the correct method.

**Answer: C**

Explanation:

In a site using Controllers, the most efficient way to integrate a script from a LINK cartridge that is also a valid CommonJS module is by using a require statement. This method enables the Architect to modularly load the necessary script, passing in any arguments that the script needs to function correctly within the existing Controller framework. This approach maintains modularity and adherence to the CommonJS module pattern, making it the most suitable for seamless integration.

### NEW QUESTION # 44

.....

Pass4Test is a rich-experienced website specialized in the Salesforce dump torrent and real pdf dumps. These pdf study materials are concluded by our professional IT trainers who have a good knowledge of Arch-303 Exam Questions torrent. They check the updating of vce braindumps every day to ensure the accuracy of Arch-303 test questions and answers.
