- C. A list of DNS queries by the specified user account
- D. A history of Falcon Ul logon activity

정답：B

설명:
User Search is an Investigate tool that helps you investigate a list of process activity executed by the specified user account. It shows information such as process name, command line, parent process name, parent command line, etc. for each process that was executed by the user account on any host in your environment. It does not show a history of Falcon UI logon activity, a count of failed user logon activity, or a list of DNS queries by the specified user account.

- C. Processes and Services
- D. Suspicious File Activity

정답：D

설명:
To view Files Written to Removable Media within a specified timeframe on a host within the Host Search page, you need to expand and refer to the Suspicious File Activity dashboard panel. - A. An external report describing a unique 5 character file extension for ransomware encrypted files
- B. Security appliance logs showing potentially bad traffic to an unknown external IP address
- C. A routine threat hunt query showing process executions of single letter filename (e.g., a.exe) from temporary directories
- D. A help desk ticket for a user clicking on a link in an email causing their machine to become unresponsive and have high CPU usage

정답：C

설명:
A Falcon threat hunting lead is a piece of information that can be used to initiate or guide a threat hunting activity within the Falcon platform.
