優秀的UiPath UiPath-ABAAv1學習筆記是行業領先材料&有效的UiPath-ABAAv1題庫最新資訊

不要再因為準備一個考試浪費太多的時間了。快點購買Fast2test的UiPath-ABAAv1考古題吧。有了這個考古題，你將更好地知道該怎麼準備考試才更有效率。這是一個可以讓你輕鬆就通過考試的難得的工具，錯過這個機會你將會後悔。所以，不要猶豫趕緊行動吧。

最新的 UiPath Automation Business Analyst Associate UiPath-ABAAv1 免費考試真題 (Q31-Q36):

問題 #31

Which role is responsible for overseeing access needs for Studio and Orchestrator during technical validation?

- **A. Solution Architect**
- B. Automation Developer
- C. Infrastructure Engineer
- D. Project Manager

答案: A

解題說明:

The Solution Architect is responsible for overseeing access requirements for UiPath tools such as Studio and Orchestrator during the Business Case and Technical Validation stage. They identify what access the developers, robots, and other roles will require to successfully design, develop, and run automations.

This includes determining:

- * Application credentials needed for bots
- * Role-based access for developers
- * Orchestrator permissions for robot scheduling and asset use

* Environment setup and connectivity

Ensuring access is defined early prevents blockers during development and testing. The Solution Architect collaborates with the Infrastructure Engineer and Client IT Team to secure and document these requirements.

問題 #32

Which of the following stages comes immediately after the Process Analysis stage?

- A. Development and Testing
- B. User Acceptance Testing
- C. Business Case and Technical Validation
- **D. Solution Design**

答案: D

解題說明:

After the Process Analysis stage, the next step in the UiPath Automation Implementation Methodology is the Solution Design stage. In this stage, the Solution Architect, along with the Automation Developer and Project Manager, uses the insights from the Process Definition Document (PDD) to create a technical blueprint for the automation.

This stage is critical because it translates the "what" from the business process into the "how" in terms of automation design. It involves designing the To-Be process flow, defining technical components, data handling logic, exception paths, and other automation modules. The output of this stage is the Approved Solution Design Document (SDD), which acts as the guideline for developers during the next phase.

The Solution Design phase ensures the automation is scalable, maintainable, and aligned with UiPath best practices. A strong design phase reduces errors, shortens development time, and provides a clear roadmap for testing and deployment.

問題 #33

Which stage in the automation implementation strategy involves selecting critical quick wins and important low-hanging fruits for initial focus?

- A. Third implementation wave
- **B. Pilot phase**
- C. Final wave
- D. Second implementation wave

答案: B

解題說明:

The Pilot phase is the stage in the automation implementation strategy where organizations focus on quick wins and low-hanging fruits—those automation opportunities that are easy to implement, carry minimal risk, and can deliver immediate, visible value. These processes typically have low complexity but high impact, such as frequent, repetitive, rules-based tasks.

The purpose of the Pilot phase is to build early momentum, validate the chosen automation tools and methodology, and create internal success stories. These successes help establish credibility for the automation program, gain stakeholder trust, and generate enthusiasm for further automation expansion.

By starting with manageable and well-scoped automations, teams can also fine-tune their implementation practices, identify potential pitfalls, and standardize governance and documentation practices for future waves. These learnings serve as a foundation for scaling automation in subsequent phases such as the second and third waves, which typically involve more complex or cross-functional processes.

Skipping or mismanaging the Pilot phase can lead to early failures, resistance, and slow adoption. Therefore, it is essential to choose this phase's automation candidates carefully based on business value and ease of implementation.

問題 #34

What is the first stage in the UiPath Automation Implementation Methodology?

- **A. Kickoff**
- B. Solution Design
- C. Process Analysis
- D. Business Case and Technical Validation

答案：A

解題說明：

The Kickoff stage is the first formal stage in the UiPath Automation Implementation Methodology. It marks the official beginning of the automation project. During this phase, initial planning and alignment take place between the Client Team and the Implementation Team. This includes defining high-level project scope, identifying key stakeholders, and setting expectations regarding timelines, deliverables, roles, and responsibilities.

The project manager, solution architect, and infrastructure engineer from the Implementation Team typically participate in the Kickoff meeting to ensure technical and managerial aspects are properly addressed.

Discussions also include initial access requirements, infrastructure needs, availability of Client Team members, and user involvement. An essential output of this stage is the reviewed Statement of Work (SOW), which outlines the agreement on the scope and project objectives. This stage sets the foundation for the successful execution of the remaining stages by aligning all parties on the project's goals and ensuring that the groundwork for collaboration is firmly in place.

問題 #35

Which role is responsible for managing roadblocks, risks, changes, and escalations during implementation?

- A. Business Analyst
- B. Automation Developer
- **C. Project Manager**
- D. Infrastructure Engineer

答案：C

解題說明：

The Project Manager is the role responsible for managing roadblocks, risks, changes, and escalations during the automation implementation process. They act as the central coordinator and point of contact for the implementation effort.

Key responsibilities include:

- * Ensuring the project is delivered on time and within scope
- * Monitoring progress and milestones
- * Managing stakeholder communication
- * Facilitating resolution of technical or operational roadblocks
- * Handling change requests and scope variations
- * Leading risk mitigation strategies

A strong Project Manager ensures that the Implementation Team functions smoothly and stays aligned with business goals. Their leadership is crucial in keeping the project on track and ensuring a successful delivery.
