#### NEW QUESTION # 169

Which statement describes the Cisco SD-Access plane functionality for fabric-enabled wireless?

- A. Control plane traffic and data plane traffic are sent to the WLC through CAPWAP tunnels.
- B. The control plane traffic is sent to the WLC through VXLAN, and the data plane traffic is sent to the WLC through CAPWAP tunnels.
- C. Control plane traffic and data plane traffic are sent to the WLC through VXLAN.
- D. The control plane traffic is sent to the WLC through CAPWAP tunnels, and the data plane traffic is sent from the AP to the fabric edge switch through VXLAN.

**Answer: D**

#### Explanation:

In SD-Access Wireless, the control plane is centralized. This means that, as with Cisco Unified Wireless Network, a Control and Provisioning of Wireless Access Points (CAPWAP) tunnel is maintained between APs and WLC. The main difference is that in SDAccess Wireless, the data plane is distributed using a Virtual Extensible LAN (VXLAN) directly from the fabric-enabled APs. <https://www.cisco.com/c/dam/en/us/td/docs/cloud-systems-management/network-automation-and-management/dna-center/deploy-guide/cisco-dna-center-sd-access-wl-dg.pdf>

#### NEW QUESTION # 170

print ( stdout )
```

- A. displays the output of the show command in a formatted way
- B. connects to a Cisco device using Telnet and exports the routing table information
- **C. connects to a Cisco device using SSH and exports the BGP table for the prefix**
- D. connects to a Cisco device using SSH and exports the routing table information

**Answer: C**

#### Explanation:

The Python code snippet provided is using a library to establish an SSH connection to a Cisco device. The 'exec\_command' function is then used to execute a 'show bgp' command, which is typically used to display the Border Gateway Protocol (BGP) table for a specific prefix. The output of this command would provide information about the BGP routing entries for that prefix.
