100% Pass Quiz SAP - C_TS414_2023 - SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management –Valid Valid Guide Files

Convenience of the online version of our C_TS414_2023 study materials is mainly reflected in the following aspects: on the one hand, the online version is not limited to any equipment. You are going to find the online version of our C_TS414_2023 exam prep applies to all electronic equipment, including telephone, computer and so on. On the other hand, if you decide to use the online version of our C_TS414_2023 Study Materials, you don't need to worry about no network.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q22-Q27):

NEW QUESTION # 22

The quality inspector check the receipt of incoming certificates in the future, they want to manage the inbox for quality certificates independently for goods receipts.

What do you activate to fulfill this requirement?

- A. Certificate Control in the Q- info record in procurement
- B. Certificate profiles in certificate type
- C. Status profiles in the certificate type
- **D. Enhanced certificate processing in the certificate type.**

Answer: D

NEW QUESTION # 23

Your costumer wants to determine a critical defect class

Which of the following function are possible during results recoding?

Correct 2 ans

- A. Trigger a subsequent inspection lot
- **B. Active a quality notification**
- **C. Trigger a workflow**
- D. Tighten the quality level

Answer: B,C

NEW QUESTION # 24

You must assign a certificate profile for outgoing certificates to a key combination. What key combination can be used without additional settings?

- A. Material
- B. Material Type
- C. Customer
- **D. Material/Customer**

Answer: D

Explanation:

In SAP S/4HANA Cloud Private Edition, Quality Management, certificate profiles for outgoing certificates (e.g., quality certificates issued to customers) are assigned to specific key combinations that define the context in which the certificate is generated. The certificate profile determines which characteristics and data are included on the certificate, typically for an outbound delivery process. The key combination "Material /Customer" is the standard option that can be used without additional configuration because it aligns with the default settings in SAP's Quality Management (QM) module for certificate processing.

* Material/Customer: This combination links the certificate profile to a specific material and customer, allowing the system to retrieve relevant inspection results and batch data for that pairing. It is preconfigured in the standard SAP system under the certificate profile assignment in Customizing (SPRO > Quality Management > Quality Certificates > Outgoing > Define Certificate Profiles). No additional settings are required because this is a common business scenario where certificates are tailored to customer-specific requirements for a material.

* Material: Assigning a certificate profile only to a material requires additional settings to ensure the system knows which customer or delivery context to apply it to, as certificates are typically customer- facing. This option is valid but not default without further configuration.

* Material Type: This is too broad and not directly supported as a standalone key combination for certificate profiles without custom enhancements, as certificate profiles need more specific granularity.

* Customer: Assigning to just a customer lacks the material context, making it incomplete for certificate generation without additional setup.

Thus, "Material/Customer" is the most straightforward and default-supported key combination. References:

SAP Help Portal - "Quality Certificates in QM" (Outgoing Certificates); SAP S/4HANA Cloud Private Edition, Quality Management Certification Guide (C_TS414_2023).

NEW QUESTION # 25

You want to complete a quality notification, but an error message appears during the status check. What could be the cause?

- A. Open activities
- B. Open causes
- **C. Open tasks**
- D. Open defects

Answer: C

Explanation:

Completing a quality notification (e.g., transaction QM02, status NOCO) requires all dependent objects to be closed:

* Open Tasks (B): Open tasks (e.g., "Investigate issue") prevent completion because they indicate unresolved actions. The system checks task status (e.g., TSOS) and blocks completion if any remain open (SPRO > QM > Quality Notifications > Define Status Profiles).

* Open Defects (A): Defects are recorded in lots or notifications but don't directly block completion unless tied to tasks.

* Open Activities (C): Activities are logged events, not blockers unless configured as tasks.

* Open Causes (D): Causes describe problems but don't prevent completion unless linked to open tasks.

Thus, "Open tasks" is the correct answer. References: SAP Help Portal - "Notification Completion in QM"; SAP S/4HANA QM User Guide - "Status Management".

NEW QUESTION # 26

Which of the following production-related events can trigger the creation of an inspection lot? Note: There are 2 correct answers to this question.

- **A. Goods movements for production order**
- B. Available-to-promise (ATP) check
- **C. Production order release**
- D. Production order creation

Answer: A,C

Explanation:

In SAP S/4HANA QM, inspection lots for production (inspection lot origin 03 or 04) are triggered by specific events in the production process:

* Production Order Release (A): Releasing a production order (transaction CO02, status REL) can create an inspection lot of origin 03 for in-process inspections if QM is active in the material master (inspection type 03) and the routing includes QM operations.

This is a standard trigger in discrete manufacturing.

* Goods Movements for Production Order (D): Goods receipt from a production order (e.g., transaction MIGO, movement type 101) triggers an inspection lot of origin 04 if inspection type 04 is active in the material master. This is common for post-production quality checks.

* Production Order Creation (B): Creating an order (status CRTD) does not typically trigger an inspection lot; it requires release or goods movement to activate QM.

* Available-to-Promise (ATP) Check (C): ATP checks availability in sales or production planning but is unrelated to QM inspection lot creation.

Thus, "Production order release" and "Goods movements for production order" are the correct answers.
