If you are having the same challenging problem, don't worry, International Code Council is here to help. Our direct and dependable International Code Council Treasury with 67 - Fire Inspector II Exam Exam Questions in three formats will surely help you pass the International Code Council Treasury with Fire-Inspector-II certification exam. Because this is a defining moment in your career, do not undervalue the importance of our Treasury with 67 - Fire Inspector II Exam (Fire-Inspector-II) exam dumps. Profit from the opportunity to get these top-notch exam questions for the Fire-Inspector-II certification test.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

Flammable medical gas supply cylinders located inside of a building must be stored in a separate room of not less than ___ fire-resistive construction when exceeding 200 cu. ft.

- A. 1-hour
- B. 1/2-hour
- C. 2-hour
- D. 3-hour

Answer: C

Explanation:

The storage of flammable medical gas supply cylinders inside a building is regulated by 2021 International Fire Code (IFC) Section 5306 - Medical Gas Systems.

IFC Section 5306.2.1 - Storage of More Than 200 Cubic Feet of Medical Gases:

When the quantity of flammable medical gas exceeds 200 cubic feet, it must be stored in a separate room with a minimum 2-hour fire-resistance rating.

The room must also comply with ventilation and explosion control requirements per NFPA 99 (Healthcare Facilities Code).

Why Other Options Are Incorrect?

A: 1/2-hour - Insufficient fire resistance for high-risk gas storage.

B: 1-hour - Does not meet the minimum 2-hour requirement set by the IFC.

D: 3-hour - Exceeds the minimum required by code; the correct requirement is 2-hour fire-resistive construction.

NEW QUESTION # 34

When more than 500 chairs are used for an assembly event held in a gymnasium, they must be secured to the floor or:

- A. be spaced at least 6 in. apart.
- B. be fastened together in groups of not less than 6.
- C. be fastened together in groups of not less than 3.
- D. be fastened together in groups of not less than 10.

Answer: C

Explanation:

Seating Arrangements for Large Assembly Events

According to the International Fire Code (IFC) 2021, Section 1029.14, when more than 500 chairs are used for an assembly event held in a gymnasium (or similar venue), they must be either:

Secured to the floor OR

Fastened together in groups of at least three (3) chairs.

2. Why Groups of 3 is the Correct Answer

This requirement ensures organized seating, preventing chairs from shifting or obstructing aisles during emergencies.

Properly fastened chairs reduce the risk of crowd-related hazards, ensuring safe and efficient evacuation if needed.

3. Verification of Other Options

Option A (spaced at least 6 inches apart) - Incorrect, as the IFC requires chairs to be fastened together or secured when over 500 are used.

Option C (groups of not less than 6) - Incorrect, as the minimum required grouping is 3.

Option D (groups of not less than 10) - Incorrect, as the IFC does not mandate groups of 10.

Reference Sources:

International Fire Code (IFC) 2021 - Section 1029.14 (Seating and Fastening Requirements for Assembly Events) NFPA 101: Life Safety Code (Seating Arrangements in Assembly Occupancies) ICC Fire Inspector II Study Guide (2021)

NEW QUESTION # 35

A building occupied for aerosol storage shall be classified as which of the following occupancy classifications?

- A. High-hazard Group H
- B. High-hazard Group H-2
- C. Group S-1
- D. High-hazard Group H-3

Answer: A

Explanation:

IFC Section 3804.1 classifies aerosol storage as Group H (high-hazard) if flammable, fitting option A.

Options B and C are subgroups (H-2, H-3), while D (Group S-1) is for moderate-hazard storage, not applicable. This is consistent with the study guide's occupancy classifications.

References: Fire Inspector II Study Guide, IFC Section 3804.1.

NEW QUESTION # 36

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- A. They must initiate an automatic fire suppression or sprinkler system.
- B. Their batteries must be checked every six months.
- C. They must be interconnected so that one alarm will activate all alarms within the guest rooms.
- D. They must automatically sound a fire alarm throughout the hotel.

Answer: C

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section 907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A: Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B: They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.

C: They must initiate an automatic fire suppression or sprinkler system.

Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.

NEW QUESTION # 37

Clearance between tops of piles of combustible fibers and sprinkler heads shall not be less than ___ ft.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Reference to Fire Code Requirements for Clearance Between Combustible Fibers and Sprinklers:

The International Fire Code (IFC 2021), Section 3206.6, states that the minimum clearance between the tops of piles of combustible fibers and sprinkler deflectors shall be no less than 3 feet.

This requirement ensures that the sprinkler system operates efficiently and that water distribution is not obstructed in case of a fire.

Fire Safety Concerns:

Combustible fibers pose a high fire risk due to their flammability and tendency to generate large amounts of heat and smoke.

Adequate clearance prevents heat accumulation near the sprinkler heads, ensuring they activate at the correct temperature.

Clarification of Incorrect Answer Choices:

A: 2 ft. # Incorrect

Too low and could obstruct sprinkler operation, reducing water distribution effectiveness.

C: 4 ft. # Incorrect

Exceeds the required minimum per the IFC 3206.6 standard, though more clearance is beneficial.

D: 5 ft. # Incorrect

More than the code requirement, but the mandatory clearance is 3 feet.

Conclusion:

The correct and verified answer is B (3 feet) based on IFC 3206.6, ensuring proper sprinkler performance and fire safety for combustible fiber storage.

NEW QUESTION # 38

.....

International Code Council Fire-Inspector-II Practice tests are formatted like real tests. The DumpsTests platform provides an exceptional level of support for individuals preparing for and taking the International Code Council Fire-Inspector-II exam. Their dedicated support team is available to assist candidates with any issues or concerns related to International Code Council Fire-Inspector-II Test Preparation. Additionally, the platform offers a money-back guarantee for those who do not pass the Fire-Inspector-II test on their first attempt.
