Latest 102-500 Test Objectives | Latest Test 102-500 Experience

In order to cater to different needs for customers, three versions for 102-500 training materials are available, and you can choose the most suitable one according to your own needs. 102-500 PDF version is printable, and if you prefer to practice on paper, you can choose this version and print it into hard one. 102-500 Soft test engine can stimulate the real exam environment, so that you can know the process of the exam, you can choose this version. Besides, 102-500 Soft test engine has two modes for practice, and it supports MS operating system. 102-500 Online test engine is convenient and easy to learn, and it has testing history and performance review, if you like this mode, you can choose this version.

Lpi LPIC-1 Exam 102, Part 2 of 2, version 5.0 Sample Questions (Q160-Q165):

NEW QUESTION # 160

Which of the following find commands will print out a list of files owned by root and with the SUID bit set in /usr?

- A. `find /usr -uid 0 -perm +4000`
- B. `find -type suid -username root -d /usr`
- C. `find /usr -suid -perm +4000`
- D. `find /usr -ls *s* -u root`
- E. `find -user root +mode +s /usr`

Answer: A

Explanation:

This command will find all the files in the /usr directory that have the user ID (UID) of 0, which is the root user, and have the permission of 4000, which is the SUID bit. The SUID bit allows the file to be executed with the privileges of the file owner, regardless of who runs it. The -uid option tests for a specific UID, and the

-perm option tests for a specific permission. The + sign before the permission means that at least those bits are set; the - sign means that exactly those bits are set. The other options are either invalid or do not match the criteria. References:

NEW QUESTION # 161

Which of the following commands can identify the PID of a process which opened a TCP port?

- A. ptrace
- B. strace
- **C. lsof**
- D. nessus
- E. debug

Answer: C

NEW QUESTION # 162

What word is missing from the following SQL statement?

_____ count(*) from tablename;

(Please specify the missing word using lower-case letters only.)

Answer:

Explanation:

select

Explanation:

The missing word is select, which is the keyword used to query data from a table in SQL. The select statement has the following syntax:

select column_list from table name where condition;

The column_list can be one or more columns separated by commas, or an asterisk (*) to indicate all columns. The table_name is the name of the table that contains the data. The where clause is optional and specifies a condition to filter the rows. The count() function is an aggregate function that returns the number of rows in the table or in a group. Therefore, the complete statement is:

select count(*) from tablename;

This statement will return the number of rows in the table named tablename. Reference: SQL COUNT() Function - W3Schools, SQL COUNT: The Ultimate Guide To SQL COUNT Function - SQL Tutorial, The SQL Count Function Explained With 7 Examples.

NEW QUESTION # 163

What is the purpose of the iconv command?

- A. It verifies that the root directory tree complies to all conventions from the Filesystem Hierarchy Standard (FHS).
- B. It changes the mode of an inode in the ext4 file system.
- **C. It converts files from one character encoding to another.**
- D. It displays additional meta information from icon files ending in .ico.
- E. It converts bitmap images from one format to another such as PNG to JPEG.

Answer: C

Explanation:

The iconv command is used to convert the encoding of a file from one character set to another. A character set is a collection of

characters that are assigned numerical values called code points. Different character sets may use different numbers of bytes to represent each character, and may have different mappings of code points to characters. For example, ASCII is a single-byte character set that encodes 128 characters, while UTF-8 is a variable-length character set that can encode over a million characters. The iconv command can convert between many different character sets, such as ASCII, UTF-8, ISO-8859-1, etc. The basic syntax for using the command is as follows:

iconv [options] -f from-encoding -t to-encoding input-file > output-file The -f option specifies the encoding of the input file, and the -t option specifies the encoding of the output file.

The input file is read from standard input, and the output file is written to standard output, unless specified otherwise. The iconv command can also list all the supported character sets with the -l option [1234]. References:
