With the Salesforce-Data-Cloud test training, you can both have the confidence and gumption to ask for better treatment. To earn such a material, you can spend some time to study our Salesforce-Data-Cloud study torrent. No study can be done successfully without a specific goal and a powerful drive, and here to earn a better living by getting promotion is a good one.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q55-Q60):

NEW QUESTION # 55

When performing Segmentation or Activation, which timezone is used to publish and refresh data?

- A. Timezone of the user defining the activity
- B. Timezone is explicitly specified when creating a segment or activation
- C. Timezone of the Data Cloud Admin user
- **D. Timezone set by the Salesforce Data Cloud org**

Answer: D

Explanation:

According to the Salesforce Data Cloud documentation¹, the timezone used for Segmentation and Activation is the one set by the

Salesforce Data Cloud org, not by the individual user or admin. This ensures consistency and accuracy across different users and regions.

NEW QUESTION # 56

A Data Cloud consultant recently discovered that their identity resolution process is matching individuals that share email addresses or phone numbers, but are not actually the same individual.

What should the consultant do to address this issue?

- **A. Create and run a new ruleset with stricter matching criteria, compare the two rulesets to review and verify the results, and then migrate to the new ruleset once approved.**
- B. Modify the existing ruleset with stricter matching criteria, run the ruleset and review the updated results, then adjust as needed until the individuals are matching correctly.
- C. Modify the existing ruleset with stricter matching criteria, compare the two rulesets to review and verify the results, and then migrate to the new ruleset once approved.
- D. Create and run a new ruleset with fewer matching rules, compare the two rulesets to review and verify the results, and then migrate to the new ruleset once approved.

Answer: A

Explanation:

Identity resolution is the process of linking source profiles from different data sources into unified individual profiles based on match and reconciliation rules. If the identity resolution process is matching individuals that share email addresses or phone numbers, but are not actually the same individual, it means that the match rules are too loose and need to be refined. The best way to address this issue is to create and run a new ruleset with stricter matching criteria, such as adding more attributes or increasing the match score threshold. Then, the consultant can compare the two rulesets to review and verify the results, and see if the new ruleset reduces the false positives and improves the accuracy of the identity resolution. Once the new ruleset is approved, the consultant can migrate to the new ruleset and delete the old one. The other options are incorrect because modifying the existing ruleset can affect the existing unified profiles and cause data loss or inconsistency.

Creating and running a new ruleset with fewer matching rules can increase the false negatives and reduce the coverage of the identity resolution. References: Create Unified Individual Profiles, AI-based Identity Resolution: Linking Diverse Customer Data, Data Cloud Identity Resolution.

NEW QUESTION # 57

A customer wants to use the transactional data from their data warehouse in Data Cloud. They are only able to export the data via a SFTP site. What are two recommended ways to bring this data into Data Cloud?

- **A. Import the file into Google Cloud Storage and ingest with the Cloud Storage Connector**
- B. Utilize Salesforce's Data Loader application to perform a bulk upload from a desktop
- **C. Import the file into Amazon S3 and ingest with the Cloud Storage Connector**
- D. Manually import the file using the Data Import Wizard

Answer: A,C

Explanation:

These two options are recommended ways to bring transactional data from a data warehouse into Data Cloud via a SFTP site. You can use the Cloud Storage Connector to ingest files from Google Cloud Storage or Amazon S3 buckets into Data Cloud. Reference:

https://help.salesforce.com/s/articleView?id=sf.c360_a_data_cloud_amazon_s3.htm&type=5

NEW QUESTION # 58

An administrator is setting up a data stream with transactional data. What field type should the administrator choose to ensure that leading zeros in the purchase order number are preserved?

- **A. Text**
- B. Decimal
- C. Serial
- D. Number

Answer: A

Explanation:

The Text field type should be chosen to preserve leading zeros in the purchase order number, as this field type stores alphanumeric characters as strings. The Number and Decimal field types store numeric values as numbers, which would remove any leading zeros. The Serial field type is not a valid field type in Data Cloud.

NEW QUESTION # 59

Which data sources are available from Marketing Cloud as a starter bundle?

- A. Email, Mobile Connect, and Einstein Engagement Scoring
- B. Email, Cloud Pages, Einstein Web & Email Recommendations
- **C. Email, MobileConnect and MobilePush**
- D. Email, MobileConnect, MobilePush and GroupConnect

Answer: C

Explanation:

These data sources are available from Marketing Cloud as a starter bundle. They provide basic contact data, such as email address, mobile number, and device ID, as well as engagement data, such as email opens, clicks, bounces, unsubscribes, SMS sends, deliveries, opt-outs, and push sends, opens, and opt-outs.
