## CompTIA Security+ Certification Exam Sample Questions (Q384-Q389):

### NEW QUESTION # 384

A Chief Information Security Officer wants to monitor the company's servers for SQLi attacks and allow for comprehensive investigations if an attack occurs. The company uses SSL decryption to allow traffic monitoring. Which of the following strategies would best accomplish this goal?

- A. Logging all NetFlow traffic into a SIEM
- B. Logging endpoint and OS-specific security logs
- C. Deploying network traffic sensors on the same subnet as the servers
- D. Enabling full packet capture for traffic entering and exiting the servers

**Answer: D**

Explanation:

Full packet capture is a technique that records all network traffic passing through a device, such as a router or firewall. It allows for detailed analysis and investigation of network events, such as SQLi attacks, by providing the complete content and context of the packets. Full packet capture can help identify the source, destination, payload, and timing of an SQLi attack, as well as the impact on the server and database. Logging NetFlow traffic, network traffic sensors, and endpoint and OS-specific security logs can provide some information about network activity, but they do not capture the full content of the packets, which may limit the scope and depth of the investigation. ### NEW QUESTION # 385

The number of tickets the help desk has been receiving has increased recently due to numerous false-positive phishing reports. Which of the following would be best to help to reduce the false positives?

- A. Implementing an incident reporting web page
- B. Hiring more help desk staff
- C. Improving security awareness training
- D. Performing more phishing simulation campaigns

**Answer: C**

Explanation:

Improving security awareness training directly addresses user behavior by teaching employees how to better recognize legitimate emails versus actual phishing attempts. Enhanced training can reduce the number of false positives by helping users more accurately identify true phishing attempts, lowering unnecessary reports and thus help desk workload.

Reference:

CompTIA Security+ SY0-701 Official Study Guide, Domain 5.5: "Improved security awareness training helps reduce false positives in user reporting by teaching users to accurately identify phishing attempts." Exam Objectives 5.5: "Summarize security awareness and training techniques."

### NEW QUESTION # 386

Which of the following documents details how to accomplish a technical security task?

- A. Procedure
- B. Guideline
- C. Standard
- D. Policy

**Answer: A**

Explanation:

A procedure provides step-by-step instructions on how to complete a specific security task, ensuring consistency and accuracy. Unlike policies, which define high-level security expectations, procedures are detailed and operational. For example, a password reset procedure would outline the exact steps IT support must follow when assisting users.

Policy: Defines security objectives and rules (e.g., "All passwords must be complex").

Standard: Specifies required technologies or configurations.

Guideline: Provides recommendations but is not mandatory.

Procedure: Gives exact instructions to perform tasks.

Reference: CompTIA Security+ SY0-701 Official Study Guide, Security Program Management and Oversight domain.

### NEW QUESTION # 387

A security investigation revealed that malicious software was installed on a server using a server administrator's credentials. During the investigation, the server administrator explained that Telnet was regularly used to log in. Which of the following most likely occurred?

- A. A remote-access Trojan was used to install the malware.
- B. A spraying attack was used to determine which credentials to use.
- C. A dictionary attack was used to log in as the server administrator.
- D. A packet capture tool was used to steal the password.

**Answer: D**

Explanation:

Telnet transmits data, including credentials, in plaintext, making it vulnerable to interception. A packet capture tool could easily capture the login credentials being transmitted, allowing an attacker to gain unauthorized access to the server.

### NEW QUESTION # 388

A security analyst needs to improve the company's authentication policy following a password audit. Which of the following should be included in the policy? (Choose two.)

- A. Complexity
- B. Least privilege
- C. Length
- D. Security keys
- E. Biometrics
- F. Something you have

**Answer: C**
