

C_ACDET_2506 Exam Simulator Online - Valid C_ACDET_2506 Torrent

There are a lot of leading experts and professors in different field in our company. The first duty of these leading experts and professors is to compile the C_ACDET_2506 exam questions. In order to meet the needs of all customers, the team of the experts in our company has done the research of the C_ACDET_2506 Study Materials in the past years. And they have considered every detail of the C_ACDET_2506 practice braindumps to be perfect. That is why our C_ACDET_2506 learning guide enjoys the best quality in the market!

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

Topic 2	<ul style="list-style-type: none"> • Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 3	<ul style="list-style-type: none"> • Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

Golden Opportunity to Get Big Discount on SAP C_ACDET_2506 Questions with 365 days Free Updates

Just as I have just mentioned, almost all of our customers have passed the exam as well as getting the related certification easily with the help of our C_ACDET_2506 exam torrent, we strongly believe that it is impossible for you to be the exception. So choosing our SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite exam question actually means that you will have more opportunities to get promotion in the near future, at the same time, needless to say that you will get a raise in pay accompanied with the promotion. What's more, when you have shown your talent with SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite certification in relating field, naturally, you will have the chance to enlarge your friends circle with a lot of distinguished persons who may influence you career life profoundly. So why are you still hesitating for purchasing our C_ACDET_2506 Guide Torrent? Your bright future is starting from here!

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q33-Q38):

NEW QUESTION # 33

While working on a customer project, the customer asks if specific details can be captured and made available in reporting for a sourcing project or contract that doesn't fit the standard fields.

What is the recommended way to handle this scenario?

- A. Configure as many custom fields as possible for data capture purposes.
- **B. Create a dynamic form (dform) where common data can be synced with the project header through customization.**
- C. Suggest the customer put a word document on the template and capture all information in that document.
- D. Create a Microsoft Form from the Actions menu for managing all the requirements.

Answer: B

NEW QUESTION # 34

A migration is performed for a Greenfield deployment to production, and the status of the Template configuration type indicates it failed. What actions do you take to make the failed template(s) available in production?

- **A. Import the missing data in production and then import the template in production**
- B. Import the template in production
- C. Request SAP intervention
- D. The template must always be rebuilt in production

Answer: A

Explanation:

When template migration fails in Greenfield deployment, it often means required master data like Flex Master Data or enumerations are missing in Production. The recommended resolution is to manually load the missing master data into Production first, then

manually import the failed templates via the Production import tools. Requesting SAP intervention is unnecessary as this is a customer-side activity.

Importing templates without missing data causes repeated failures, and rebuilding templates is not always required if proper data exists.

NEW QUESTION # 35

What actions can typically be performed on existing fields? Note: There are 3 correct answers to this question.

- A. Add a Visibility, Editability, or Validity Condition
- B. Change the field type
- C. Change the internal name
- D. Make the field mandatory
- E. Change the help tip

Answer: A,D,E

NEW QUESTION # 36

Which Activate phase is tied to performing configurations in your SAP Ariba Strategic Sourcing suite solution?

- A. Configure
- B. Realize
- C. Deploy
- D. Setup

Answer: B

NEW QUESTION # 37

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- A. Enable field property "Use relationship chooser" in the Advanced tab
- B. Define a Visibility Condition in the Conditions tab
- C. Load Relation types and Relation entries
- D. Enable field property "Enable for Template Field Setter" in the Advanced tab
- E. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab

Answer: E

Explanation:

To filter a custom field's available values based on another field's value in SAP Ariba, you populate the "Relation Name" and "NameTableConstraintFieldPath" properties in the field's Advanced tab. This configuration links the field to a predefined relation type and specifies the constraint field used for filtering.

Simply loading relation types (B) is a prerequisite but does not configure filtering on the field itself. Visibility conditions (C) control whether a field is shown, not the filtering of its values. Enabling "Use relationship chooser" (D) is necessary but insufficient alone without defining the relation and constraint field. The "Enable for Template Field Setter" (E) option is unrelated to filtering. This filtering enables dynamic picklists where options depend on another field's selection, improving data accuracy and user experience.

NEW QUESTION # 38

.....

Generally speaking, you can achieve your basic goal within a week with our C_ACDET_2506 study guide. Besides, for new updates happened in this line, our experts continuously bring out new ideas in this C_ACDET_2506 exam for you. The new supplemental updates will be sent to your mailbox if there is and be free. Because we promise to give free update of our C_ACDET_2506 Learning Materials for one year to all our customers.
