Download Valid SAP C-TS410\_2504 Exam Dumps for Best Preparation

1. Which documents does SAP Transportation Management support when planning transportation with SAP S/4HANA? Note: There are 3 correct answers to this question

- A. Material documents
- B. Stock transport orders
- C. Transfer orders
- D. Inbound deliveries
- E. Returns

**Answer:** B D E

**Explanation:**

SAP Transportation Management (TM) within SAP S/4HANA supports the planning, execution, and monitoring of transportation processes. The documents it supports in this context are crucial for ensuring the seamless movement of goods and materials.

Specifically:

Stock transport orders (B): These are used for the internal transfer of materials between plants or company codes within the same corporate group. They play a significant role in planning and executing transportation requirements, especially for intra-company movements.

Inbound deliveries (D): These documents are generated based on purchase orders or stock transport orders and are essential for the transportation planning of goods coming into the company. They provide detailed information about the goods to be received, facilitating the planning of transportation resources and schedules.

Returns (E): This involves the process of sending goods back to the supplier or to another location within the company. Returns require transportation planning and execution, making them relevant documents within SAP TM for ensuring the reverse logistics process is efficiently managed.

Material documents (A) and transfer orders (C) are not directly supported by SAP TM for transportation planning. Material documents are typically associated with inventory management and goods movements, while transfer orders are more related to warehouse management processes.

2. What is the result of posting a vendor's invoice?

- A. The material ledger document is generated
- B. The vendor's account is cleared of open items.
- C. The purchase order history is updated.
- D. Vendor payment is posted

**Answer:** C

**Explanation:**

Posting a vendor's invoice in SAP S/4HANA results in several important updates and document generations, one of which is the update of the purchase order history (C). This update provides a comprehensive record of all transactions associated with a specific purchase order, including the receipt of goods and invoice verification, ensuring transparency and traceability in procurement processes.

The material ledger document (A) is not directly generated by posting a vendor's invoice but rather by material movements and valuation changes in inventory.

Clearing the vendor's account of open items (B) occurs when payments are made against the invoices, not when the invoice itself is posted.

Vendor payment (D) is a subsequent step after the invoice posting and is part of the accounts payable process, where the actual payment transaction to settle the vendor's invoice takes place.
