If you want to walk into the test center with confidence, you should prepare well for CIS-DF certification. While, where to get the accurate and valid ServiceNow study pdf is another question puzzling you. Now, CIS-DF sure pass exam will help you step ahead in the real exam and assist you get your CIS-DF Certification easily. Our CIS-DF test questions answers will provide the best valid and accurate knowledge for you and give you right reference. You will successfully pass your actual test with the help of our high quality and high hit-rate CIS-DF study torrent.

The design of our CIS-DF guide training is ingenious and delicate. Every detail is perfect. For example, if you choose to study our learning materials on our windows software, you will find the interface our learning materials are concise and beautiful, so it can allow you to study CIS-DF exam questions in a concise and undisturbed environment. In addition, you will find a lot of small buttons, which can give you a lot of help. Some buttons are used to hide or show the answer. What's more important is that we have spare space, so you can take notes under each question in the process of learning CIS-DF Study Tool. When you start, there will be a timer to help you to time, so that you can finish the problem within the prescribed time and it can create an environment. If you are satisfied with our CIS-DF exam questions, you can make a choice to purchase them.

CIS-DF Latest Study Notes & CIS-DF Latest Exam Materials

The pass rate of CIS-DF study materials are 98.95%, if you buy CIS-DF study material from us, we can ensure you pass the exam successfully. Besides you can get CIS-DF exam dumps in ten minutes after your payment. You can use the CIS-DF exam dumps freely, if you have any questions in the process of your learning, you can consult the service staff, and they have the professional knowledge about CIS-DF Learning Materials, so don't hesitate to ask for help from them.

ServiceNow Certified Implementation Specialist - Data Foundations (CMDB and CSDM) Sample Questions (Q22-Q27):

NEW QUESTION # 22

In a company, there is a need to understand the CSDM maturity level required. Different stakeholders listed several use cases they expect over time.

Which use case requires information objects?

- A. The SecOps team wants to understand the operational risk in the Business Application context
- B. The Business Service Management team wants to understand the operational impact for their consumer parties
- C. The Customer Service team wants to onboard proactive case management
- **D. The Asset Management team wants to understand asset lifecycle compliance in a Business Application context**
- E. The Event Operations team wants to automate their events into incidents for operational actions

Answer: D

Explanation:

Within the Common Service Data Model (CSDM), information objects are used to represent non-CI data entities that provide important business or governance context but are not configuration items themselves.

These objects are especially important when extending service visibility beyond pure infrastructure and application relationships.

The use case described in Option A—understanding asset lifecycle compliance in a Business Application context—explicitly requires information objects. Asset lifecycle data (such as financial state, depreciation, warranty, and compliance milestones) is typically managed in IT Asset Management (ITAM) and must be associated to Business Applications without converting every asset-related data point into a CI. Information objects enable this linkage while maintaining clean CMDB boundaries.

Option B focuses on event-to-incident automation, which relies on CIs, technical services, and operational relationships, not information objects. Option C (proactive case management) is primarily a CSM and service offering use case. Option D (SecOps risk context) relies on application services and business application relationships, not information objects. Option E (business service impact) is addressed through service modeling and service mapping, again without requiring information objects.

Information objects are introduced as organizations mature and need to integrate governance, financial, or compliance data with service and application models—making asset lifecycle compliance the correct match.

Therefore, the correct answer is A.

NEW QUESTION # 23

(Choose 2 options)

A CMDB Administrator wants to run the "Services Have Owners Identified" Get Well Playbook to remediate issues shown in the CMDB Data Foundations Dashboard.

Which remediation plays would be used?

- A. Report Data
- **B. Fix Data**
- **C. Govern Data**
- D. Analyze Data

Answer: B,C

Explanation:

The CMDB Data Foundations Dashboard is paired with Get Well Playbooks that guide administrators through structured remediation. The "Services Have Owners Identified" playbook focuses on closing ownership gaps for services, which is a governance and data correction activity.

Fix Data (Option B) is used to correct missing or incorrect values, such as populating owner fields, assigning responsible groups, or updating relationships. In this playbook, Fix Data actions are required to actually remediate the issue by assigning owners to services.

Govern Data (Option C) is also required because ownership is not a one-time correction—it must be enforced and sustained. Govern Data establishes policies, ownership accountability, and controls (such as certifications or attestations) to ensure services continue to have owners over time and do not regress.

Analyze Data (Option B) is used to understand patterns and root causes, but it does not remediate the issue. Report Data (Option C) provides visibility and communication, not corrective action. Therefore, the remediation plays that apply to the Services Have Owners Identified playbook are Fix Data and Govern Data, making Options A and D correct.

NEW QUESTION # 24

A Platform Data Owner wants to improve data quality with reconciliation rules across five discovery sources. The Data Owner knows the best option is to include CMDB 360 / Multisource CMDB to manage and monitor discovery sources. The company currently does not have the ITOM Discovery license required for CMDB 360 / Multisource CMDB. What can the Data Owner do in this case?

- A. ITOM Discovery must be purchased to take advantage of multisource IRE rules
- B. CMDB 360 / Multisource is a platform product that can be used immediately
- C. The IRE reconciliation rules can use discovery sources regardless of CMDB 360 being enabled

Answer: C

Explanation:

The Identification and Reconciliation Engine (IRE) is a core platform capability in ServiceNow and does not require CMDB 360 / Multisource CMDB to function. Even without the ITOM Discovery license, organizations can still define and use IRE reconciliation rules across multiple data sources.

IRE rules are source-aware and can evaluate attributes based on source precedence, regardless of whether CMDB 360 is enabled. CMDB 360 enhances visibility, governance, and monitoring of multiple sources, but it is not a prerequisite for reconciliation logic itself.

NEW QUESTION # 25

Drag and Drop Question

ServiceNow provides a suite of CMDB management tools designed to effectively ingest, manage, and maintain CIs and relationships.

Drag and drop the design architecture to its management tool. (Some options may not apply.)

Answer:

Explanation:

Explanation:

Agent Client Collector: This is ServiceNow's agent-based approach. It requires a software agent to be installed on the target host to

run discovery patterns locally.

Import Sets: This is the traditional, manual way to bring in data. You define the source, and the organization builds the logic (Transform Maps) to move that data into the CMDB.

Service Graph Connector: These are found in the ServiceNow Store. They are "certified" integrations built to work with specific third-party vendors (like SCCM or Jamf) with minimal setup.

ServiceNow Discovery: The classic agentless method. It probes the network and uses patterns to identify and map CIs without needing software installed on every machine.

NEW QUESTION # 26

According to the Common Service Data Model (CSDM), a server team is requesting a catalog item be created for infrastructure requests.

Which role is involved initiating the request and defining requirements?

- A. Technology Service Owners
- B. Application Service Owners
- C. Enterprise Architect

Answer: A

Explanation:

In CSDM, Technology Services (and their Service Offerings) represent how technical capabilities are delivered and consumed by internal teams. When a server team requests a catalog item for infrastructure services (e.g., VM provisioning, storage, OS builds), the role responsible for initiating the request and defining requirements is the Technology Service Owner.

Technology Service Owners understand the operational capabilities, constraints, SLAs, and fulfillment workflows required to deliver infrastructure services. They define catalog requirements such as options, approvals, fulfillment tasks, and guardrails—ensuring the request aligns with standardization, security, and operational readiness.

Application Service Owners focus on how applications are delivered and supported, not on defining infrastructure catalog items. Enterprise Architects provide standards and guidance but do not initiate or define catalog request requirements.

Thus, the correct role is B - Technology Service Owners.

NEW QUESTION # 27

.....

So, what are you waiting for? Unlock your potential and buy ServiceNow CIS-DF questions today! Start your journey to a bright future, and join the thousands of students who have already seen success with our Certified Implementation Specialist - Data Foundations (CMDB and CSDM) (CIS-DF) practice material. With updated CIS-DF Questions, you too can achieve your goals in the ServiceNow sector. Take the first step towards your future now and buy Prepare for your Certified Implementation Specialist - Data Foundations (CMDB and CSDM) (CIS-DF) study material. You won't regret it!
