

ISACA CDPSE Dumps - Pass Exam And Build Successful Career

DOWNLOAD the newest Exam4Docs CDPSE PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1Gfg-3suU6RAaXG8428uo5D4Bv7cCYat9>

Exam4Docs promise that we will spare no effort to help you pass ISACA certification CDPSE exam. Now you can free download part of practice questions and answers of ISACA certification CDPSE exam on Exam4Docs. When you select Exam4Docs, you can not only pass ISACA Certification CDPSE Exam, but also have one year free update service. Exam4Docs can also promise if you fail to pass the exam, Exam4Docs will 100% refund.

Who should take the Isaca CDPSE Certification Exam?

The targeted audience for the Isaca CDPSE Certification Exam is IT professionals and students who are involved in the field of information technology. The candidates should be aware of the data privacy and data security issues. The candidates should be aware of the standards and guidelines that are related to data privacy and data security. **CDPSE Dumps** recommends that individuals who have job titles like IT experts and students who are involved in the field of information technology can also take the CDPSE exam. The candidates should be aware of the data privacy and data security issues. The candidates should be aware of the standards and guidelines that are related to data privacy and data security.

Isaca CDPSE Certification Exam - A quick overview

CDPSE Exam is a sought-after certification exam in the IT industry. It is also known as Certified Data Privacy Solutions Engineer. This certification exam is authorized by the International Society for Information Risk and Compliance (ISARC) and is offered by Isaca Training Institute. The exam is a certification exam that aims to validate the technical skills and knowledge it takes to assess, build and implement comprehensive privacy solutions. Implement cisco enterprise network solutions. The answers to these questions help to validate the candidate's skills and understanding of Privacy Solutions. **CDPSE Dumps** can help you pass this exam on your first attempt.

Candidates who pass the CDPSE Exam can fill the gap with technical privacy skills so that the organization has competent privacy technologists to build and implement solutions that enhance efficiency and mitigate risk. Candidates who have passed the CDPSE Exam can be considered for employment opportunities in ISACA as a Professional in Risk Assurance and Information Security. The exam will certify the understanding and skills of a professional in information privacy. Understanding in hop redundancy protocols, logical security, and physical security. The majority of students are glad to decide to pursue this certification as it will help them to get a better job.

New CDPSE Exam Test & CDPSE Valid Dumps Files

To become more powerful and struggle for a new self, getting a professional CDPSE certification is the first step beyond all questions. We suggest you choose our CDPSE test prep ----an exam braindump leader in the field. Since we release the first set of the CDPSE quiz guide, we have won good response from our customers and until now---a decade later, our products have become

more mature and win more recognition. And our CDPSE Exam Torrent will also be sold at a discount from time to time and many preferential activities are waiting for you.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q62-Q67):

NEW QUESTION # 62

Which of the following is the best reason for a health organization to use desktop virtualization to implement stronger access control to systems containing patient records?

- A. Limited functions and capabilities of a secured operating environment
- **B. Monitored network activities for unauthorized use**
- C. Improved data integrity and reduced effort for privacy audits
- D. Unlimited functionalities and highly secured applications

Answer: B

NEW QUESTION # 63

Which of the following deployed at an enterprise level will MOST effectively block malicious tracking of user Internet browsing?

- A. Desktop antivirus software
- **B. Domain name system (DNS) sinkhole**
- C. Web application firewall (WAF)
- D. Website URL blacklisting

Answer: B

Explanation:

Explanation

Domain name system (DNS) sinkhole is a technology that redirects malicious or unwanted domain names to alternative destinations, such as a fake or harmless website, a warning page, or a null address. DNS sinkhole is the most effective technology deployed at an enterprise level to block malicious tracking of user internet browsing, as it would prevent users from accessing websites that use tracking technologies, such as cookies, web beacons, or fingerprinting, to collect and analyze user behavior or preferences. DNS sinkhole would also protect users from other malicious activities, such as malware distribution, phishing attempts, or botnet command and control. The other options are not as effective as DNS sinkhole in blocking malicious tracking of user internet browsing at an enterprise level. Web application firewall (WAF) is a technology that monitors and filters incoming and outgoing web traffic to protect web applications from attacks, such as cross-site scripting (XSS), SQL injection, or denial-of-service (DoS), but it does not block malicious tracking of user internet browsing. Website URL blacklisting is a method of blocking access to websites that are known or suspected to be malicious or harmful, but it does not block malicious tracking of user internet browsing from unknown or legitimate websites that use tracking technologies. Desktop antivirus software is a technology that scans and removes viruses, malware, spyware, or other threats from desktop computers or devices, but it does not block malicious tracking of user internet browsing from websites that use tracking technologies¹, p. 92 References: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 64

Which of the following describes a user's "right to be forgotten"?

- A. The individual's legal residence status has recently changed.
- B. The individual objects despite legitimate grounds for processing.
- **C. The data is no longer required for the purpose originally collected.**
- D. The data is being used to comply with legal obligations or the public interest.

Answer: C

Explanation:

The right to be forgotten is a privacy right that allows individuals to request the deletion or removal of their personal data from a data controller's records or systems under certain conditions. One of these conditions is when the data is no longer required for the purpose originally collected, meaning that the data has become obsolete, irrelevant or excessive for fulfilling the initial purpose for which it was obtained or processed by the data controller. The other options are not valid conditions for exercising the right to be forgotten. The data is being used to comply with legal obligations or public interest is an exception that may prevent the data

controller from deleting or removing the data upon request, as there may be overriding legitimate grounds for retaining the data for legal compliance or public interest reasons. The individual objects despite legitimate grounds for processing is a condition for exercising the right to object, not the right to be forgotten, which allows individuals to oppose the processing of their personal data based on their particular situation or for direct marketing purposes. The individual's legal residence status has recently changed is not a relevant factor for exercising the right to be forgotten, as it does not affect the necessity or relevance of the data for its original purpose1, p. 107-108 Reference: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 65

Which of the following is the PRIMARY reason that a single cryptographic key should be used for only one purpose, such as encryption or authentication?

- A. It minimizes the risk if the cryptographic key is compromised.
- B. It eliminates cryptographic key collision.
- C. It is more practical and efficient to use a single cryptographic key.
- D. Each process can only be supported by its own unique key management process.

Answer: A

Explanation:

Explanation

The primary reason that a single cryptographic key should be used for only one purpose, such as encryption or authentication, is that it minimizes the risk if the cryptographic key is compromised. A cryptographic key is a piece of information that is used to perform cryptographic operations, such as encryption or authentication.

Encryption is a process of transforming data into an unreadable form using a secret key or algorithm.

Authentication is a process of verifying the identity or integrity of a user or data using a secret key or algorithm. If a single cryptographic key is used for multiple purposes, such as encryption and authentication, it increases the risk if the cryptographic key is compromised. For example, if an attacker obtains the cryptographic key that is used for both encryption and authentication, they can decrypt and access personal data, as well as impersonate or modify legitimate users or data. Therefore, a single cryptographic key should be used for only one purpose, and different keys should be used for different purposes. References: : CDPSE Review Manual (Digital Version), page 107

NEW QUESTION # 66

Which of the following is MOST important when developing an organizational data privacy program?

- A. Profiling current data use
- B. Following an established privacy framework
- C. Obtaining approval from process owners
- D. Performing an inventory of all data

Answer: B

Explanation:

Following an established privacy framework is the most important step when developing an organizational data privacy program because it provides a structured and consistent approach to identify, assess, and manage privacy risks and compliance obligations. A privacy framework can also help to align the privacy program with the organization's strategic goals, values, and culture, as well as to communicate and demonstrate the privacy program's effectiveness to internal and external stakeholders. Some examples of established privacy frameworks are the NIST Privacy Framework, the ISO/IEC 27701:2019, and the AICPA Privacy Maturity Model.
