

# New Professional-Cloud-DevOps-Engineer Exam Questions | Professional-Cloud-DevOps-Engineer Reliable Study Plan

P.S. Free 2026 Google Professional-Cloud-DevOps-Engineer dumps are available on Google Drive shared by BraindumpsPrep: <https://drive.google.com/open?id=1cGq1z1qqa1rHDy2o-bckNLtcsKLCPCkk>

Our website has different kind of certification dumps for different companies; you can find a wide range of Google test questions and high-quality of dumps torrent. What's more, you just need to spend one or two days to practice the Professional-Cloud-DevOps-Engineer Certification Dumps if you decide to choose us as your partner. It will be very simple for you to pass the Professional-Cloud-DevOps-Engineer real exam.

Google Professional-Cloud-DevOps-Engineer certification is an excellent choice for professionals who are interested in developing their skills and knowledge in the field of cloud DevOps engineering. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification program is designed to help professionals gain a deeper understanding of cloud computing concepts, DevOps principles, and best practices for deploying and maintaining applications on GCP.

Earning the Google Professional-Cloud-DevOps-Engineer Certification can demonstrate to employers that an individual has the skills and knowledge needed to effectively manage cloud technologies with DevOps practices. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification can also lead to better job opportunities and higher salaries for cloud professionals.

## BraindumpsPrep Professional-Cloud-DevOps-Engineer Exam Questions Demo is Available for Instant Download Free of Cost

The cost of registering for a certification Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) exam is quite expensive, ranging between \$100 and \$1000. After paying such an amount, the candidate is sure to be on a tight budget. BraindumpsPrep provides Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) preparation material at very low prices compared to other platforms. We also assure you that the amount will not be wasted and you will not have to pay for the Google Cloud Certified - Professional Cloud DevOps Engineer Exam (Professional-Cloud-DevOps-Engineer) certification test for a second time.

The Google Professional-Cloud-DevOps-Engineer exam consists of multiple-choice questions that test the candidate's knowledge and understanding of various cloud computing concepts and tools. Professional-Cloud-DevOps-Engineer exam is designed to assess the candidate's ability to design and implement scalable and secure cloud solutions using best practices and industry standards. Professional-Cloud-DevOps-Engineer Exam takes approximately two hours to complete, and candidates must achieve a passing score of 70% or higher to receive certification. The Google Professional-Cloud-DevOps-Engineer certification is a valuable credential for professionals who want to demonstrate their expertise in cloud DevOps engineering and advance their careers in this field.

## Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q183-Q188):

### NEW QUESTION # 183

You need to deploy a new service to production. The service needs to automatically scale using a Managed Instance Group (MIG) and should be deployed over multiple regions. The service needs a large number of resources for each instance and you need to plan for capacity. What should you do?

- A. Deploy the service in one region and use a global load balancer to route traffic to this region.
- B. Use the n2-highcpu-96 machine type in the configuration of the MIG.
- C. Monitor results of Stackdriver Trace to determine the required amount of resources.
- **D. Validate that the resource requirements are within the available quota limits of each region.**

**Answer: D**

Explanation:

[https://cloud.google.com/compute/quotas#understanding\\_quotas](https://cloud.google.com/compute/quotas#understanding_quotas)

<https://cloud.google.com/compute/quotas>

### NEW QUESTION # 184

You support an application deployed on Compute Engine. The application connects to a Cloud SQL instance to store and retrieve data. After an update to the application, users report errors showing database timeout messages. The number of concurrent active users remained stable. You need to find the most probable cause of the database timeout. What should you do?

- A. Use Stackdriver Profiler to visualize the resources utilization throughout the application.
- B. Check the serial port logs of the Compute Engine instance.
- **C. Determine whether there is an increased number of connections to the Cloud SQL instance.**
- D. Use Cloud Security Scanner to see whether your Cloud SQL is under a Distributed Denial of Service (DDoS) attack.

**Answer: C**

Explanation:

The most probable cause of the database timeout is an increased number of connections to the Cloud SQL instance. This could happen if the application does not close connections properly or if it creates too many connections at once. You can check the number of connections to the Cloud SQL instance using Cloud Monitoring or Cloud SQL Admin API.

### NEW QUESTION # 185

You are developing a strategy for monitoring your Google Cloud Platform (GCP) projects in production using Stackdriver Workspaces. One of the requirements is to be able to quickly identify and react to production environment issues without false alerts from development and staging projects. You want to ensure that you adhere to the principle of least privilege when providing relevant team members with access to Stackdriver Workspaces. What should you do?

- **A. Create a new GCP monitoring project, and create a Stackdriver Workspace inside it. Attach the production projects to this workspace. Grant relevant team members read access to the Stackdriver Workspace.**
- B. Grant relevant team members read access to all GCP production projects. Create Stackdriver workspaces inside each project.
- C. Grant relevant team members the Project Viewer IAM role on all GCP production projects. Create Stackdriver workspaces inside each project.
- D. Choose an existing GCP production project to host the monitoring workspace. Attach the production projects to this workspace. Grant relevant team members read access to the Stackdriver Workspace.

**Answer: A**

Explanation:

"A Project can host many Projects and appear in many Projects, but it can only be used as the scoping project once. We recommend that you create a new Project for the purpose of having multiple Projects in the same scope."

### NEW QUESTION # 186

You are ready to deploy a new feature of a web-based application to production. You want to use Google Kubernetes Engine (GKE) to perform a phased rollout to half of the web server pods. What should you do?

- A. Use a stateful set with parallel pod management policy.
- **B. Use a partitioned rolling update.**
- C. Use Node taints with NoExecute.
- D. Use a replica set in the deployment specification.

**Answer: B**

#### NEW QUESTION # 187

You support an e-commerce application that runs on a large Google Kubernetes Engine (GKE) cluster deployed on-premises and on Google Cloud Platform. The application consists of microservices that run in containers. You want to identify containers that are using the most CPU and memory. What should you do?

- A. Use Prometheus to collect and aggregate logs per container, and then analyze the results in Grafana.
- **B. Use Stackdriver Kubernetes Engine Monitoring.**
- C. Use the Stackdriver Monitoring API to create custom metrics, and then organize your containers using groups.
- D. Use Stackdriver Logging to export application logs to BigQuery, aggregate logs per container, and then analyze CPU and memory consumption.

**Answer: B**
