TDA-C01 Reliable Braindumps Sheet - TDA-C01 Latest Braindumps Files

Our specialists check whether the contents of TDA-C01 real exam are updated every day. If there are newer versions, they will be sent to users in time to ensure that users can enjoy the latest resources in the first time. In such a way, our TDA-C01 guide materials can have such a fast update rate that is taking into account the needs of users. Users using our TDA-C01 Study Materials must be the first group of people who come into contact with new resources. When you receive an update reminder from TDA-C01 practice questions, you can update the version in time and you will never miss a key message.

Tableau Certified Data Analyst Sample Questions (Q89-Q94):

NEW QUESTION # 89

You have the following:

Overall Rank and Rank are calculated fields that use the RANK function.

You filter out the sub-category where [Overall Rank] - 1.

For which three the sub-categories will the value of Rank change? Choose three.

- A. Bookcases
- **B. Tables**
- C. Copiers
- **D. Accessories**
- E. Chairs
- **F. Machines**
- **G. Phones**
- G. Furnishings

Answer: B,D,F

Explanation:

In Tableau, the RANK function assigns a rank to each row within a partition of the data, based on the value of the field being ranked. It is important to understand that the rank is recalculated whenever the underlying data or the partitioning changes.

In the given scenario, the Overall Rank is based on the Sales figures, while the Rank (presumably) is based on the Sales within the Category. When filtering on the condition where [Overall Rank] - 1, it means we are excluding the sub-category that has an Overall Rank of 2.

Looking at the data:

Furnishings has an Overall Rank of 8, which does not meet the filter condition ($[\text{Overall Rank}] - 1$). Therefore, its rank remains the same.

Tables have an Overall Rank of 3. When the sub-category with an Overall Rank of 2 is removed (Chairs in this case), Tables move up in the overall ranking. However, since Tables are the top-ranked within the Furniture category, their Rank within the category would remain unchanged at 1.

Chairs have an Overall Rank of 2, which meets the filter condition and thus will be removed from the view. We cannot determine the change in Rank for Chairs because they are filtered out.

Accessories have an Overall Rank of 5. If any sub-category with a higher Overall Rank (1 to 4) is removed, the rank of Accessories within the Technology category could change because it is currently ranked 3 in its category. With the removal of Phones (Overall Rank 1), the Rank of Accessories could potentially increase.

Copiers have an Overall Rank of 6, which does not meet the filter condition. Therefore, its rank remains the same.

Machines have an Overall Rank of 4. If we remove Phones (Overall Rank 1), Machines will move up in the overall ranking and potentially within the Technology category as well, changing its Rank from 2 to 1.

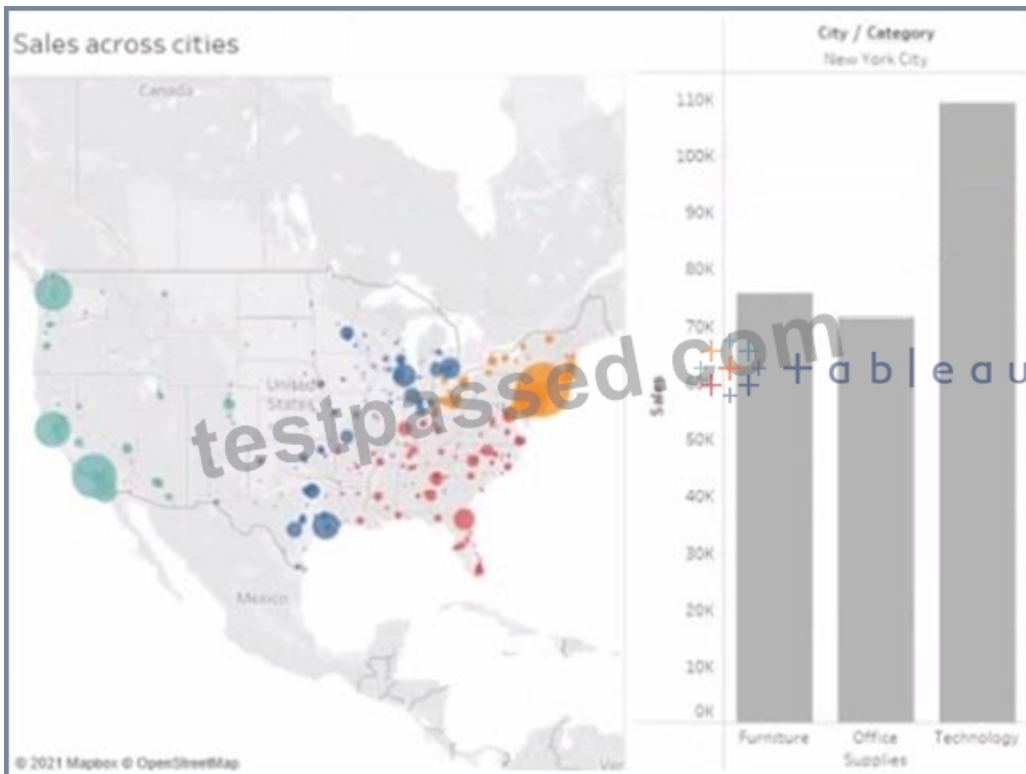

Phones have an Overall Rank of 1, which does not meet the filter condition of being Overall Rank 2. Therefore, its rank remains the same.

Bookcases have an Overall Rank of 7, which does not meet the filter condition. Therefore, its rank remains the same.

Based on this analysis, when the sub-category with an Overall Rank of 2 (Chairs) is removed, the Rank value will change for Tables, Accessories, and Machines, as they will move up in the overall ranking within their respective categories. However, it's important to note that while Tables will move up in the overall ranking, their rank within the Furniture category would not change as they are already at the top. The rank changes for Accessories and Machines are due to the removal of Phones, which is ranked higher overall and within the Technology category.

NEW QUESTION # 90

You have the following dashboard.

When a user selects a city on the map the data on the bar chart must show only the data for the selected city. The data in the bar chart must change only when the user selects a different city. How should you configure the dashboard action? (Use the dropdowns in the Answers Area to select the correct options.)

Answer Area

Dashboard action:

Running action:

Clearing the section will:

Answer:

Explanation:

Answer Area

Dashboard action:

Running action:

Clearing the section will:

Explanation:

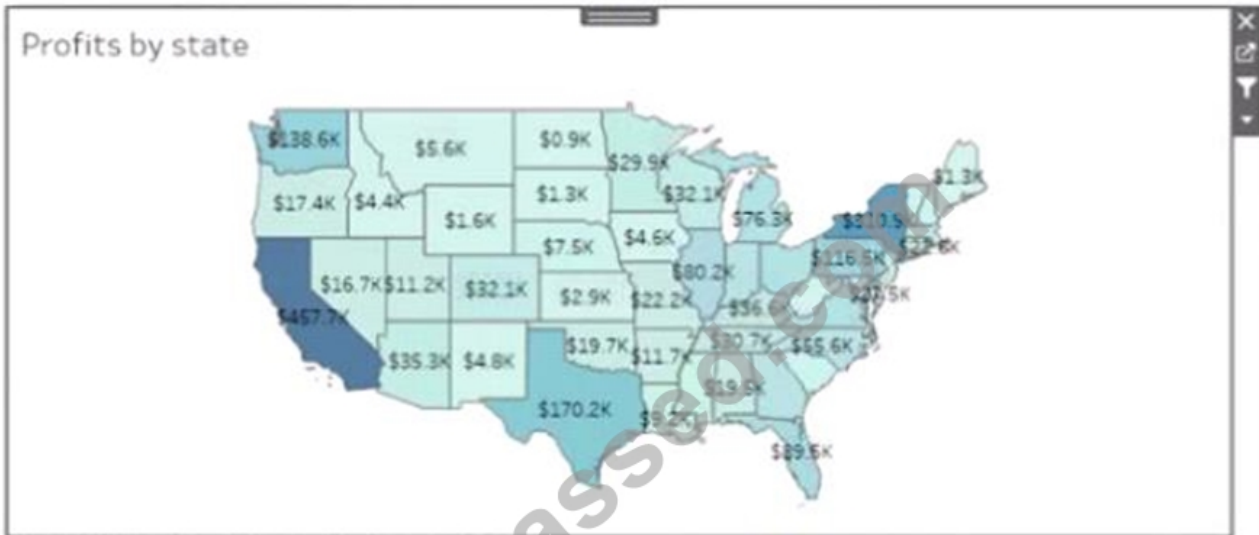

To configure the dashboard action, you should select Filter as the action type, Select as the run action on option, and All Fields as the target filters option. This will ensure that when a user selects a city on the map, the bar chart will show only the data for the selected city based on all fields in common between the two worksheets. The action will run only when the user selects a different city. References:

NEW QUESTION # 91

You have the following dashboard.

Sales over time

Detail table

Category	Sub-Catego..	Profit	Sales	Orders
Furniture	Bookcases	-3,473	114,880	228
	Chairs	26,590	328,449	617
	Furnishings	13,059	91,705	957
	Tables	-17,725	206,966	319
Office Supplies	Appliances	18,138	107,532	466
	Art	6,528	27,119	796
	Binders	30,222	203,413	1,523
	Envelopes	6,964	16,476	254
	Markers	950	3,024	217

Currently the map is used as a filter that affects the data on the other sheets of the dashboard. You need to configure the dashboard to ensure that selecting a data point on the map only filters the Detail table. What should you do?

- A. From the context menu of Profits by State deselect Use as Filter
- B. From the context menu of Sales over time select Ignore Actions
- C. From the context menu of Sales over time select Deselect
- **D. From the context menu of Sales over time select Remove Dashboard Item**

Answer: D

NEW QUESTION # 92

You have a dataset that contains daily sales by business segment from 2017 to the present. You want to use monthly historical trends to predict sales by segment in the future. Which three actions should you perform in order?

(Place the three correct options in order. Use the arrows to move Options to Answer Area. In Answer Area arrows to re-order the options.)

Options

- From the Analytics pane, drag **Trend Line** to the worksheet.
- Add the date to the Columns shelf. Add the segment and the sales to the Rows shelf.
- Aggregate the date to month and year.
- From the Analytics pane, drag **Forecast** to the worksheet.
- Create a calculated field that uses the MODEL_QUANTILE function.

Answer Area

Answer:

Explanation:

Options

- From the Analytics pane, drag **Trend Line** to the worksheet
- Add the date to the Columns shelf. Add the segment and the sales to the Rows shelf.
- Aggregate the date to month and year
- From the Analytics pane, drag **Forecast** to the worksheet
- Create a calculated field that uses the `MODEL_QUANTILE` function

Answer Area

- Add the date to the Columns shelf. Add the segment and the sales to the Rows shelf.
- Aggregate the date to month and year.
- From the Analytics pane, drag **Forecast** to the worksheet.

Explanation:

The correct order of the three actions is:

Add the date to the Columns shelf. Add the segment and the sales to the Rows shelf.

Aggregate the date to month and year.

From the Analytics pane, drag Forecast to the worksheet.

The first action is to add the date to the Columns shelf and the segment and the sales to the Rows shelf. This will create a line chart that shows the daily sales by segment over time. You can use the Show Me menu to choose a line chart if it is not selected by default.

The second action is to aggregate the date to month and year. This will group the daily sales into monthly sales and show the yearly trend. You can right-click on the date field on the Columns shelf and select Month (January 2017) from the menu. You can also drag Year from the Dimensions pane to the Columns shelf before or after Month.

The third action is to drag Forecast from the Analytics pane to the worksheet. This will add a forecast that predicts future sales by segment based on historical trends. You can customize the forecast by clicking on it and using the options on the Marks card.

The other options are not relevant for this scenario. Adding a trend line would show a linear or nonlinear relationship between two measures, but not a prediction of future values. Creating a calculated field that uses the model quantile function would return a value from a statistical model based on a given quantile, but not a forecast.

NEW QUESTION # 93

You have the Mowing two tables that contains data about the books in a library.

Table1

Book Title	Book Author
Great Expectations	Charles Dickens
Harry Potter and the Chamber of Secrets	J. K. Rowling
To Kill a Mockingbird	Harper Lee
Don Quixote	Miguel de Cervantes
...	...

Table2

Book Title	Publication Year
Great Expectations	1860
To Kill a Mockingbird	1960
Don Quixote	1615
Jane Eyre	1847
...	...

Both tables are incomplete so there are books missing from the tables.

You need to combine the tables. The solution must ensure that all the data is retained Which type of join should you use?

- A. left join
- B. Right join
- C. Full outer join
- D. Inner join

Answer: D

NEW QUESTION # 94

.....

The service of TDA-C01 test guide is very prominent. It always considers the needs of customers in the development process. There are three versions of our TDA-C01 learning question, PDF, PC and APP. You can choose according to your needs. Of course, you can use the trial version of TDA-C01 exam training in advance. After you use it, you will have a more profound experience. You can choose your favorite our TDA-C01 Study Materials version according to your feelings. I believe that you will be more inclined to choose a good service product, such as TDA-C01 learning question
