## ISTQB CTFL: Chapter 1 - Quiz with 100% correct answers

What helps testers measure the quality of an application's non-functional requirements and characteristics? - answer testing

Testing can verify correctness of an application. (T or F) - answer False. Testing can assist in finding defects, providing information to decision-makers and prevent defects but cannot provide proof of correctness.

Testers are responsible for finding, analyzing and fixing defects in an application. (T or F) - answer False. This is the definition of 'debugging' and is typically done by the developers on a team. Testers are responsible for testing.

Testing effort shall be focused proportionally to the expected and later observed defect density of modules. A large number of modules are usually responsible for the most operational failures. (T or F) - answer False. This is one of the seven principles of testing: defect clustering, which states a small number of modules are typically to blame for most operational failures.

What is the name of the activity in which the team compares the actual progress on a project with the plan? This includes reporting on the plan's status and deviations. - answer test control

What does the acronym ISTQB represent? - answer International Software Testing Qualifications Board

During test implementation and execution, testers compare actual results with expected results and manually execute test procedures according to planned sequences. (T or F) - answer True.

The proper order of the main activities of testing are: Analysis and Design, Planning and Control, Implementation and Execution, Evaluating Exit Criteria and Reporting, and Test Closure. (T or F) - answer False. Planning and Control begin first, followed by Analysis and Design. Control flows through the entire process.

## ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q13-Q18):

### NEW QUESTION # 13

As an acceptance tester you want to test the \$100 withdrawal process described by the following Business Process Model and Notation (BPMN) model.

You would like to achieve the following coverage criterion "execute all possible process tasks". Consider the following test cases:

Test 1: balance = \$100, receipt = YES

Test 2: balance = \$120, receipt = NO

Test 3: balance = \$85

Test 4: balance = \$20, receipt = YES

Which of the following is the minimal set of test cases allowing to achieve required coverage?

- A. Test 2, Test 4
- B. Test 1, Test 2, Test 3
- C. Test 1, Test 2, Test 4
- D. Test 1, Test 3

**Answer: D**

### NEW QUESTION # 14

Which one of the following sentences describes BEST a major advantage when business analysts and testers review the acceptance criteria together?

- A. A shared vision between the business analyst and the tester on acceptance criteria facilitates the design of acceptance test cases.
- B. The review of acceptance criteria helps to verify that acceptance test cases cover business processes, business rules and business risks.
- C. The review of acceptance criteria is a good practice to improve the quality of test reports.
- D. A joint review ensures that non-functional quality criteria are taken into account.

**Answer: A**

### NEW QUESTION # 15

How does ISTQB CTFL test activities relate to the IQBBA FL business analysis and requirements engineering activities?

- A. Business analysts and tester have to decide, whether they follow the IQBBA or ISTQB lifecycle processes, because they exclude each other.
- B. Business analysts who follow the IQBBA requirements engineering process will not be involved in designing test cases.
- C. **Test analysis and test design activities may result in changes of acceptance criteria.**
- D. The IQBBA solution evaluation phase precedes the ISTQB test implementation and test execution activities.

**Answer: C**

**NEW QUESTION # 16**

Which of the following report formats fits the intended audience BEST?

- A. Test results pie charts for the development team
- **B. Progress trend charts for the project manager**
- C. Defect reports for the project's steering group
- D. Top 3 testing project risks for system users

**Answer: B**

Explanation:

Effective test reporting should be tailored to the audience's role and needs. Project managers are typically concerned with high-level progress, schedules, risks, and milestones. Progress trend charts (e.g., test execution over time, defect trends) provide insights into how the project is advancing and help identify delays or bottlenecks.

Option B is correct as it fits the informational needs of a project manager.

Other options:

A: Defect reports are too detailed for steering groups, which prefer strategic summaries or risk reports.

C: Pie charts may provide high-level summaries, but development teams usually need detailed defect or test result data.

D: System users (e.g., customers) are not responsible for project risks and would not benefit from test risk rankings.

B). Progress trend charts for the project manager

**NEW QUESTION # 17**

Suppose you are testing a new professional exam support system. As input the system takes two grades from two exams. For each exam the possible grade is 0 or 1 point. As output the system returns a single string - the decision about the entitlements: if the total score is 2, the candidate receives full entitlements. If the total score is 1, she receives partial entitlements. If the total score is 0, the candidate fails and receives no entitlements.

Which of the following is the correct Decision Model and Notation (DMN) model for this situation?

a)

Entitlements table			
	Inputs		Outputs
u	Exam #1	Exam #2	Entitlements
1	0	0	No
2	0	1	Partial
3	1	0	Partial
4	1	1	Full

b)

Entitlements table	
Exam result	Entitlements
0	No
1	Partial
	Full

c)

u	Inputs		Outputs		
	Exam #1	Exam #2	No entitlements	Partial entitlements	Full entitlements
1	0	0	YES	NO	NO
2	0	1	NO	YES	NO
3	1	0	NO	YES	NO
4	1	1	NO	NO	YES

d)

rule	Exam #1	Exam #2	Result	Output
1	e1	e2	e1 + e2	0: no 1: partial 2: full

- A. Option D
- B. Option B
- C. Option A
- D. Option C

#### Answer: A

Explanation:

Decision Model and Notation (DMN) is a standardized approach used to model decision logic, often represented in decision tables that evaluate inputs and determine outputs. In this scenario, the entitlements granted to a candidate are based on the total score from two exams, where:

Each exam can be graded as either 0 or 1.

The combined score can be 0, 1, or 2.

The entitlements depend on the combined result:

0 # No entitlements

1 # Partial entitlements

2 # Full entitlements

Among the given diagrams:

Option A simply lists test cases but lacks explicit logic modeling.

Option B shows a mapping from total score to entitlements but doesn't model how the total is derived from the two exams.

Option C redundantly splits outputs into multiple Boolean fields and doesn't reflect how the decision is made from exam inputs.

Option D is the correct representation.

Option D uses:

e1 and e2 as inputs for Exam #1 and Exam #2.

Result as the sum of e1 + e2.

A final Output mapped based on the Result:

0 # No

1 # Partial

2 # Full

This structure accurately follows the DMN standard by expressing inputs, a derived result, and the corresponding decision output, making Option D the correct and most complete decision model.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 2.3):

"Decision tables are commonly used to express business rules that determine outputs based on combinations of inputs. DMN formalizes this structure to support automated reasoning."
