Authorized Nonprofit-Cloud-Consultant Test Dumps - Nonprofit-Cloud-

Consultant New Dumps Book

The Salesforce Nonprofit-Cloud-Consultant practice exam software of RealValidExam has questions that have a striking resemblance to the queries of the Salesforce Certified Nonprofit Cloud Consultant Exam (Nonprofit-Cloud-Consultant) real questions. It has a user-friendly interface. You don't require an active internet connection to run it once the Nonprofit-Cloud-Consultant Practice Test software is installed on Windows computers and laptops.

Salesforce Nonprofit-Cloud-Consultant Certification is a prestigious qualification for those who are interested in consulting on Salesforce projects for nonprofit organizations. The Salesforce Nonprofit-Cloud-Consultant (SP20) exam is designed to equip aspiring professionals with the skills to use Salesforce Nonprofit Cloud to better engage donors, stakeholders, and communities. Passing the exam showcases an individual's expertise in the latest Salesforce technologies and concepts, which are tailored specifically to nonprofit organizations.

Salesforce Certified Nonprofit Cloud Consultant Exam Sample Questions (Q85-Q90):

NEW QUESTION # 85
When a system admin for a nonprofit times to import data into the NPSP Data Import Object, the error message: "The matching field you chose (Record ID) is not mapped and is required for an Update and Insert operation" appears.
What are two actions the system admin can take to resolve the error?
Choose 2 answers

- A. Select --None-- for all matching fields if the admin is using the Salesforce Data Import Wizard.
- B. Select "Upsert" if the admin is using the Salesforce Data Loader.
- C. Select the appropriate Record ID in the Salesforce Data Import Wizard.
- D. Select "Insert" if the admin is using the Salesforce Data Loader.

Answer: B,C

Explanation:
https://developer.salesforce.com/forums/?id=9060G000000I7sYQAS ,and "D".(When importing data into the NPSP Data Import Object, if the error message indicates that the Record ID field is not mapped, the system admin should ensure that the appropriate mapping is set up and use the correct operation for the data loader.
Select the Appropriate Record ID (A):
In the Salesforce Data Import Wizard, ensure that the Record ID field is correctly mapped. This field is required for updating existing records or ensuring data integrity.
Select "Upsert" Operation (C):
When using the Salesforce Data Loader, choose the "Upsert" operation. This allows the system to insert new records or update existing ones based on the Record ID or an external ID, ensuring that duplicates are avoided and data is accurately imported.
Steps to Resolve:
Check Field Mapping:
Verify that the Record ID field is mapped correctly in the import wizard or data loader.
Choose Upsert Operation:
If using the Data Loader, select the "Upsert" option to handle both insertions and updates.

NEW QUESTION # 86
The development director wants all users to only see Engagement Plans on Opportunity records for donations with an Amount greater than 10,000. How should this be accomplished?

- A. Create a custom Lightning component that dis9plays all Engagement Plans. Add the component to the Opportunity Lightning Page. Assign the Lightning Page as the Org Default and Activate it.101112
- B. Add the Related Lists component to the Opportunity Lightning page. Set the component visibility filter to ensure the Opportunity Amount field is greater than 10,000. Assign the page to the development director's profile.
- C. Add the Related List - Single Lightning component to the Opportunity Lightning pa13ge. Add a component visibility filter to display the Engagement Plan when the Opportunity Amount field is greater than 10,000.
- D. Create a tab and associate the Engagement Plan object to the tab. Add the Related List - Single Lightning component and

set it to Engagement Plans. Give read access for the Engagement Plan object to all profiles.8

Answer: C

Explanation:
To meet this requirement, a consultant should leverage Dynamic Lightning Pages, specifically using Component Visibility Filters. This allows for a declarative solution that does not require multiple page layouts or custom code.
Step-by-Step Implementation:
* Edit the Page: Navigate to an Opportunity record and select Edit Page from the Setup (gear) icon to open the Lightning App Builder.
* Add the Component: Drag the Related List - Single component onto the page layout.
* Configure the Component: In the component properties sidebar, set the Related List to "Engagement Plans."
* Set Visibility Filter: Scroll down to the Set Component Visibility section and click + Add Filter.
* Define Criteria: * Field: Amount
* Operator: Greater Than
* Value: 10,000
* Save and Activate: Save the page. When "All Users" (per the requirement) view an Opportunity, the Engagement Plan related list will simply be invisible if the amount is $10,000 or less. If it is $10,001 or more, the component will appear.
Why other options are incorrect:
* Option A: Assigning the page only to the development director's profile violates the requirement that
"all users" should see it when the criteria is met.
* Option B: This is an overly complex and disjointed user experience that doesn't actually filter the view based on the specific Opportunity's amount.
* Option C: A custom component is unnecessary "Technical Debt" since standard functionality meets the requirement perfectly.

NEW QUESTION # 87
A membership organization needs to send out automated renewal emails on a 30/60/90 period. Each referenced email template needs to differ based on the members' web site visits. Which automation method should a consultant recommend?

- A. Process Builder
- B. Apex Trigger and Scheduler
- C. Time-Based Workflow
- D. Pardot

Answer: C

NEW QUESTION # 88
A nonprofit organization uses Customizable Rollups and has a large volume of Recurring Donation Allocations for a specific fund. The system administrator notices a scheduled skew job, but does not remember scheduling it. What should the consultant advise the system administrator to do?

- A. View the Setup Audit Trail
- B. Delete the job
- C. Run a debug log
- D. Keep the job

Answer: A

Explanation:
When the system administrator notices a scheduled skew job but does not remember scheduling it, the best course of action is to view the Setup Audit Trail. This will help determine the origin and purpose of the job. Here's how to do it:
Navigate to Setup:
Click on the gear icon in the top right corner of Salesforce.
Select "Setup".
Access the Setup Audit Trail:
In the Quick Find box, type "Setup Audit Trail".
Click on "View Setup Audit Trail".
Review the Audit Trail:
The Setup Audit Trail logs changes made to your Salesforce configuration, including scheduled jobs.

Look for entries related to the creation or modification of scheduled jobs.
Identify who created the job, when it was created, and any additional details provided in the log.
Determine Next Steps:
Based on the information found in the audit trail, decide whether the job is necessary.
If the job is not needed, it can be deleted. If it is essential, ensure that it is documented and understood.

NEW QUESTION # 89
A multinational nonprofit wants all Apex error messages to be sent to a specific system admin.
How should the consultant configure NPSP to send error notifications only to this admin?

- **A. Set the specific admin as the user to receive error notifications on the NPSP Settings tab under System Tools > Error Notifications.**
- B. Change the profile for all users except the specific admin to something different than system admin.
- C. Uncheck the Send Apex Warning Emails checkbox on all admins except for the specific admin.
- D. Set all users except the specific admin as disabled for receiving error notifications on the NPSP Settings tab under System Tools > Error Notifications.

Answer: A

Explanation:
To configure NPSP to send Apex error messages to a specific system admin, you should follow these steps:
* Navigate to NPSP Settings:
* Go to the App Launcher in Salesforce.
* Type "NPSP Settings" in the search bar and select it.
* Access System Tools:
* In the NPSP Settings, locate the "System Tools" section in the left-hand sidebar.
* Configure Error Notifications:
* Under System Tools, select "Error Notifications."
* Here, you will find options to configure who receives error notifications.
* Set the Specific Admin:
* Find the field where you can specify the user to receive error notifications.
* Enter the username or search for the specific admin user you want to receive these notifications.
* Save the settings.
By following these steps, you ensure that all Apex error messages are sent only to the specified system admin, effectively managing error notifications within NPSP.
