In order to remain competitive in the market, our company has been keeping researching and developing of the new Associate-Cloud-Engineer exam questions. We are focused on offering the most comprehensive Associate-Cloud-Engineer study materials which cover all official tests. Now, we have launched some popular Associate-Cloud-Engineer training prep to meet your demands. And you will find the quality of the Associate-Cloud-Engineer learning quiz is the first-class and it is very convenient to download it.

Google Associate-Cloud-Engineer exam is designed to test the candidate's knowledge of various Google Cloud Platform products and services such as Compute Engine, Kubernetes Engine, Cloud Storage, Stackdriver, and IAM. Associate-Cloud-Engineer Exam also assesses the candidate's ability to deploy and manage applications, monitor operations, and configure access and security controls.

Associate-Cloud-Engineer Practice Materials Seize the Focus to Make You Master It in a Short Time - ValidDumps

With our Associate-Cloud-Engineer study materials, all your agreeable outcomes are no longer dreams for you. And with the aid of our Google Associate Cloud Engineer Exam Associate-Cloud-Engineer exam preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our Google Associate-Cloud-Engineer learning questions.

Earning the Google Associate-Cloud-Engineer Certification is a great way to demonstrate your expertise and knowledge of cloud computing and cloud engineering on the Google Cloud Platform. Google Associate Cloud Engineer Exam certification can help you stand out in a competitive job market, increase your earning potential, and provide you with access to exclusive Google Cloud Platform resources and events.

Google Associate Cloud Engineer Exam Sample Questions (Q309-Q314):

NEW QUESTION # 309

You are the team lead of a group of 10 developers. You provided each developer with an individual Google Cloud Project that they can use as their personal sandbox to experiment with different Google Cloud solutions. You want to be notified if any of the developers are spending above \$500 per month on their sandbox environment. What should you do?

- **A. Create a budget per project and configure budget alerts on all of these budgets.**
- B. Create a single billing account for all sandbox projects and enable BigQuery billing exports. Create a Data Studio dashboard to plot the spending per project.
- C. Create a separate billing account per sandbox project and enable BigQuery billing exports. Create a Data Studio

dashboard to plot the spending per billing account.

- D. Create a single budget for all projects and configure budget alerts on this budget.

Answer: A

NEW QUESTION # 310

You need to host an application on a Compute Engine instance in a project shared with other teams. You want to prevent the other teams from accidentally causing downtime on that application. Which feature should you use?

- A. Use a Shielded VM.
- B. Use a Preemptible VM.
- C. Use a sole-tenant node.
- D. Enable deletion protection on the instance.

Answer: D

Explanation:

Preventing Accidental VM Deletion

This document describes how to protect specific VM instances from deletion by setting the deletionProtection property on an Instance resource. To learn more about VM instances, read the Instances documentation.

As part of your workload, there might be certain VM instances that are critical to running your application or services, such as an instance running a SQL server, a server used as a license manager, and so on. These VM instances might need to stay running indefinitely so you need a way to protect these VMs from being deleted.

By setting the deletionProtection flag, a VM instance can be protected from accidental deletion. If a user attempts to delete a VM instance for which you have set the deletionProtection flag, the request fails. Only a user that has been granted a role with compute.instances.create permission can reset the flag to allow the resource to be deleted.

<https://cloud.google.com/compute/docs/instances/preventing-accidental-vm-deletion>

NEW QUESTION # 311

You will have several applications running on different Compute Engine instances in the same project. You want to specify at a more granular level the service account each instance uses when calling Google Cloud APIs. What should you do?

- A. After starting the instances, use gcloud compute instances update to specify a Service Account for each instance
- B. When creating the instances, specify a Service Account for each instance
- C. After starting the instances, use gcloud compute instances update to assign the name of the relevant Service Account as instance metadata
- D. When creating the instances, assign the name of each Service Account as instance metadata

Answer: B

Explanation:

https://cloud.google.com/compute/docs/access/service-accounts#associating_a_service_account_to_an_instance

NEW QUESTION # 312

You have an application that receives SSL-encrypted TCP traffic on port 443. Clients for this application are located all over the world. You want to minimize latency for the clients. Which load balancing option should you use?

- A. HTTPS Load Balancer
- B. Internal TCP/UDP Load Balancer.
Add a firewall rule allowing ingress traffic from 0.0.0.0/0 on the target instances.
- C. SSL Proxy Load Balancer
- D. Network Load Balancer

Answer: C

Explanation:

The type of traffic that you need your load balancer to handle is another factor in determining which load balancer to use:

HTTP and HTTPS traffic: External HTTP(S) Load Balancing / Regional external HTTP(S) / load balancer Internal HTTP(S) Load

Balancing TCP traffic: TCP Proxy Load Balancing / External TCP/UDP Network Load Balancing / Internal TCP/UDP Load Balancing / SSL traffic: SSL Proxy Load Balancing UDP traffic: External TCP/UDP Network Load Balancing / Internal TCP/UDP Load Balancing

NEW QUESTION # 313

You are configuring Cloud DNS. You want to create DNS records to point `home.mydomain.com`, `mydomain.com`, and `www.mydomain.com` to the IP address of your Google Cloud load balancer. What should you do?

- A. Create one CNAME record to point `mydomain.com` to the load balancer, and create two A records to point `WWW` and `HOME` to `mydomain.com` respectively.
- B. Create one CNAME record to point `mydomain.com` to the load balancer, and create two AAAA records to point `WWW` and `HOME` to `mydomain.com` respectively.
- C. Create one A record to point `mydomain.com` to the load balancer, and create two CNAME records to point `WWW` and `HOME` to `mydomain.com` respectively.
- D. Create one A record to point `mydomain.com` to the load balancer, and create two NS records to point `WWW` and `HOME` to `mydomain.com` respectively.

Answer: C
