

Latest 200-901 Exam Guide - 200-901 Questions Pdf

2026 Latest Easy4Engine 200-901 PDF Dumps and 200-901 Exam Engine Free Share: <https://drive.google.com/open?id=1F9hRZO8ynqpbArWFuTwrh91WpeJvUkn->

Our company is professional brand. There are a lot of experts and professors in the field in our company. All the experts in our company are devoting all of their time to design the best 200-901 200-901 study materials for all people. In order to ensure quality of the products, a lot of experts keep themselves working day and night. We believe that our study materials will have the ability to help all people pass their 200-901 Exam and get the related exam in the near future.

Cisco 200-901 (DevNet Associate) Exam is suitable for network engineers, software developers, and IT professionals who want to learn how to develop software applications that are integrated with networking technologies. 200-901 exam covers the basics of programming languages such as Python, JavaScript, and JSON, as well as the use of APIs to automate network infrastructure. The DevNet Associate certification validates the candidates' ability to design, develop, and maintain software applications that interact with network devices and services.

The DevNet Associate Exam certification exam consists of 120 minutes of testing time and includes 90-110 questions. 200-901 Exam covers topics such as software development and design, APIs, Cisco platforms and development, application deployment and security, and infrastructure and automation.

A good job can create the discovery of more spacious space for us, in the process of looking for a job, we will find that, get the test 200-901 certification, acquire the qualification of as much as possible to our employment effect is significant. Your life can be

changed by our 200-901 Exam Questions. Numerous grateful feedbacks from our loyal customers proved that we are the most popular vendor in this field to offer our 200-901 preparation questions. You can totally rely on us.

Cisco DevNet Associate Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38

Drag and Drop the Bash commands from the left onto the correct actions on the right.

Answer:

Explanation:

Explanation

1 - d, 2 - i, 3 - e, 4 - a, 5 - j, 6 - b, 7 - g, 8 - h, 9 - c, 10 - f

NEW QUESTION # 39

Drag and drop the functions from the left onto the networking devices on the right.

Answer:

Explanation:

Explanation:

NEW QUESTION # 40

Refer to the exhibit.

What is the action of the Bash script that is shown?

- A. The script waits until input is entered. If the directory exists, the script goes into it until there is no directory with the same name, then it creates a new directory.
- B. The script waits until input is entered, then it goes into the directory entered and creates a new directory with the same name.
- C. The script goes into the directory called "\$ndir" and makes a new directory called "\$ndir"
- D. For all directories in the current folder. The script goes into directory and makes a new directory.

Answer: A

NEW QUESTION # 41

Refer to the exhibit.

Which JSON snippet configures a new interface according to YANG model?

- A.
- B.
- C.
- D.

Answer: C

Explanation:

To determine the correct JSON snippet for configuring a new interface according to the YANG model, we need to carefully examine both the YANG model definitions and the provided JSON snippets. Here's a step-by-step explanation:

YANG Model Analysis:

The ietf-interfaces YANG module defines a container interfaces with a list interface.

Each interface has the following important leaves: name, enabled, and description.

The ietf-ip YANG module augments the interface list with a container ipv4, which includes a list address. Each address has the ip and netmask leaves.

Key Elements in JSON:

To configure an interface, the JSON must include the name of the interface, its enabled status, and the IP address configuration.

The structure should reflect the hierarchy defined by the YANG models.

Options Analysis:

Option A:

json

Copy code

```
"ietf-interfaces:interface": {  
  "name": "Loopback100",  
  "enabled": true,  
  "ietf-ip:ipv4": {  
    "address": [  
      {  
        "ip": "10.255.254.1",  
        "netmask": "255.255.255.0"  
      }  
    ]  
  }  
}
```

This option correctly follows the hierarchy specified in the YANG model. The interface includes name and enabled leaves and augments with ietf-ip:ipv4 which includes the address list with ip and netmask.

Option B:

```
"ietf-interfaces": {  
  "interface": {  
    "name": "Loopback100",  
    "enabled": true,  
    "ietf-ip": {  
      "ipv4": {  
        "address": [  
          {  
            "ip": "10.255.254.1",  
            "netmask": "255.255.255.0"  
          }  
        ]  
      }  
    }  
  }  
}
```

This option incorrectly nests interface directly under ietf-interfaces, which does not match the YANG model's structure.

Option C:

```
"interface": {  
  "name": "Loopback100",  
  "enabled": true,  
  "ipv4": {  
    "address": [  
      {  
        "ip": "10.255.254.1",  
        "netmask": "255.255.255.0"  
      }  
    ]  
  }  
}
```

This option misses the namespace prefixes ietf-interfaces and ietf-ip required by the YANG model.

Option D:

```
"ietf-interfaces:interface": {  
  "name": "Loopback100",  
  "enabled": true,  
  "ietf-ip:ipv4:address": [  
    {  
      "ip": "10.255.254.1",  
      "netmask": "255.255.255.0"  
    }  
  ]  
}
```

}

This option incorrectly uses `ietf-ip:ipv4:address` directly, which does not align with the proper hierarchy where address should be nested inside `ipv4`.

Correct

Option A correctly adheres to the YANG model hierarchy and namespace specifications.

It properly nests address within `ipv4`, which is itself nested within `ietf-ip` augmentation to interface.

This structure is consistent with how the YANG models define the relationships between the elements.

NEW QUESTION # 42

Which HTTP status Code means that the server cannot or will not process the request because of perceived client error?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

The HTTP status code 400 indicates that the server cannot or will not process the request due to a client error.

HTTP Status Code 400 - Bad Request:

Meaning: The server cannot process the request due to a client-side error. This could be due to malformed request syntax, invalid request message framing, or deceptive request routing.

Common Causes: Typical reasons for a 400 Bad Request include incorrect URL formatting, invalid query parameters, or unsupported characters in the request.

Client Error Category: Status codes in the 4xx range indicate client errors, where the problem lies with the request sent by the client rather than the server.

Other Status Codes:

100 - Continue: Informational status code indicating that the initial part of a request has been received and the client can continue with the rest of the request.

203 - Non-Authoritative Information: The server successfully processed the request, but the information may come from a different source.

303 - See Other: The server is redirecting the client to a different resource, typically using the GET method.
