Quiz C-S4EWM-2023 - Accurate New SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Test Tips

A steadily rising competition has been noted in the tech field. Countless candidates around the globe aspire to be SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management in this field. SAP C-S4EWM-2023 stand out from the rest of the SAP professionals. Once you become SAP certified, a whole new scope opens up to you and you are immediately hired by reputed firms. Even though the SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management boosts your career options, you have to pass the C-S4EWM-2023 Exam. This SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management exam serves to filter out the capable from incapable candidates.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q12-Q17):

NEW QUESTION # 12
To which of the following objects can you assign external process steps? Note: There are 2 correct answers to this question.

- A. Handling unit type
- B. Packaging specification
- C. Delivery item type
- D. Work center

Answer: A,D

Explanation:
External process steps in SAP EWM define specific tasks executed outside the warehouse system. These can be assigned to the following objects:
* Work Center (C):
* External process steps can be directly linked to a work center to manage operations such as packing, kitting, or labeling.
* This assignment is made in the process-oriented storage control configuration.
* Handling Unit Type (D):
* Specific handling unit types can be configured to include external process steps.
* This ensures that certain types of handling units (e.g., pallets or boxes) are processed through external services like inspection or labeling.
Incorrect Options:
* A: Delivery item types are not directly associated with external process steps.
* B: Packaging specifications are used for packing processes but do not link to external process steps.
References:
* SAP EWM Documentation: Process-Oriented Storage Control
* SAP Help Portal: External Process Steps Configuration

NEW QUESTION # 13
What can you control with an activity area? Note: There are 2 correct answers to this question.

- A. The interim bin for layout oriented storage control
- B. The area in which a resource will work in the warehouse
- C. The doors that can be connected to a staging area
- D. The warehouse order creation rules to be used

Answer: B,D

NEW QUESTION # 14
What can you do with a storage group? Note: There are 2 correct answers to this question.

- A. Use it to define a logical or physical breakdown of a storage type.
- B. Use it in process-oriented and layout-oriented storage control.
- C. Assign it to multiple storage bins.
- D. Assign it as an intermediate storage group.

Answer: B,C

NEW QUESTION # 15

An exception code can be triggered by the system or entered by a user. What must you assign to a customer- specific exception code?

- A. A workflow as follow-on action
- B. A business context
- C. A process step
- D. An internal exception code

Answer: D

Explanation:
Exception Codes in SAP EWM
* Exception codes manage deviations during warehouse processes.
* Internal Exception Code (B): Customer-specific exception codes must be mapped to internal system codes to define their behavior and subsequent actions.
Excluded Options
* Business Context (A): Defines general business scenarios but is not directly required for exception code assignment.
* Workflow as Follow-On Action (C): While workflows can be triggered, this is not mandatory for exception code setup.
* Process Step (D): Process steps use exception codes but are not a prerequisite for assigning them.
SAP S/4HANA Cloud Private Edition Reference
* Refer to Exception Management and Code Assignment in SAP EWM configuration guides.

NEW QUESTION # 16

When creating new document types, what must you keep in mind about system profiles?

- A. That you should use the profiles created by Business Configuration Sets (BC Sets)
- B. That you have to define your own profiles for your specific processes
- C. That the profiles have to be assigned to your new document type
- D. That the profiles are predefined and not changeable

Answer: D

Explanation:
* Understanding Document Types in SAP S/4HANA Cloud Private Edition and Extended Warehouse Management (EWM):Document types in EWM are used to categorize and define various processes like inbound, outbound, internal, and production activities. These document types also influence the way the system processes the underlying transactions.
* System Profiles in EWM:System profiles in Extended Warehouse Management are predefined by SAP. They represent standard configurations essential for core processes and ensure consistency across different implementations. These profiles are associated with document types to define process-specific settings, such as warehouse process types, item category determination, or movement types.
* Key Points About System Profiles:
* System profiles, such as document category profiles or warehouse order creation rules, are delivered by SAP as part of the standard configuration.
* These profiles are not editable or changeable by customers or consultants. This limitation ensures that critical functionalities behave as intended without customizations impacting the integrity of the system.
* Customers must align their process design with these predefined profiles or utilize SAP- recommended enhancements for specific needs.
* Implications for New Document Types:When creating new document types, you cannot define your own system profiles for them. Instead, you must rely on the system profiles already provided by SAP.
This restriction reinforces adherence to best practices and simplifies system maintenance.
* Why Option B is Correct:The profiles are predefined and not changeable, which aligns with SAP's standardized approach to managing EWM configurations. Other options are incorrect because:
* Option A: You cannot define your own profiles.
* Option C: Business Configuration Sets (BC Sets) are optional templates and do not replace system profiles.
* Option D: While profiles are associated with document types, they are not custom-defined; they are predefined.
