

# New CCDAK Dumps Questions & Valid Brindumps CCDAK Ppt

2026 Latest ExamcollectionPass CCDAK PDF Dumps and CCDAK Exam Engine Free Share: <https://drive.google.com/open?id=1wMrQG9SC6-BMChDyXYMswo87rh2i-RXy>

It is evident to all that the CCDAK test torrent from our company has a high quality all the time. A lot of people who have bought our products can agree that our CCDAK test questions are very useful for them to get the certification. There have been 99 percent people used our CCDAK Exam Prep that have passed their exam and get the certification. It means that our CCDAK test questions are very useful for all people to achieve their dreams, and the high quality of our CCDAK exam prep is one insurmountable problem.

In this career advancement Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) certification journey you can get help from valid, updated, and real CCDAK Dumps questions which you can instantly download from ExamcollectionPass. At this platform, you will get the top-rated and Real CCDAK Exam Questions that are ideal study material for quick Confluent CCDAK exam preparation.

## Confluent CCDAK Practice Test - Pass Exam And Boost Your Career

Keeping the dynamic Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) exam content in mind, we provide updated and reliable CCDAK test material. We also offer free Confluent Dumps updates for up to 1 year after your purchase. We only provide cost-effective Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) exam practice material. A 24/7 customer service can also help you in case of any problem. Don't wait for your success if the best Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) exam preparation material is available on our platform. You can get actual Confluent Certified Developer for Apache Kafka Certification Examination (CCDAK) exam questions and prepare for your test in a short time. If you have any issue, please contact our customer support.

## Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q60-Q65):

### NEW QUESTION # 60

If I want to have an extremely high confidence that leaders and replicas have my data, I should use

- A. acks=all, replication factor=2, min.insync.replicas=1
- **B. acks=all, replication factor=3, min.insync.replicas=2**
- C. acks=all, replication factor=3, min.insync.replicas=1
- D. acks=1, replication factor=3, min.insync.replicas=2

**Answer: B**

Explanation:

acks=all means the leader will wait for all in-sync replicas to acknowledge the record. Also the min in-sync replica setting specifies the minimum number of replicas that need to be in-sync for the partition to remain available for writes.

#### NEW QUESTION # 61

Refer to the producer code below. It features a 'Callback' class with a method called 'onCompletion()'.  
In the 'onCompletion()' method, what does the 'metadata.offset()' value represent?

`producer.send(record, new MyCallback(record));`

- A. The number of bytes that overflowed beyond a producer batch of messages
- B. Its position in the producer's batch of messages
- C. The id of the partition that the message was committed to
- **D. The sequential id of the message is committed into a partition**

**Answer: D**

#### NEW QUESTION # 62

How do you create a topic named test with 3 partitions and 3 replicas using the Kafka CLI?

- A. `bin/kafka-topics-create.sh --zookeeper localhost:9092 --replication-factor 3 --partitions 3 --topic test`
- B. `bin/kafka-topics.sh --create --bootstrap-server localhost:2181 --replication-factor 3 --partitions 3 --topic test`
- C. `bin/kafka-topics.sh --create --broker-list localhost:9092 --replication-factor 3 --partitions 3 --topic test`
- **D. `bin/kafka-topics.sh --create --bootstrap-server localhost:9092 --replication-factor 3 --partitions 3 --topic test`**

**Answer: D**

Explanation:

As of Kafka 2.3, the `kafka-topics.sh` command can take `--bootstrap-server localhost:9092` as an argument.

You could also use the (now deprecated) option of `--zookeeper localhost:2181`.

#### NEW QUESTION # 63

You are doing complex calculations using a machine learning framework on records fetched from a Kafka topic. It takes more about 6 minutes to process a record batch, and the consumer enters rebalances even though it's still running. How can you improve this scenario?

- A. Increase `heartbeat.interval.ms` to 600000
- B. Add consumers to the consumer group and kill them right away
- C. Increase `session.timeout.ms` to 600000
- **D. Increase `max.poll.interval.ms` to 600000**

**Answer: D**

Explanation:

Here, we need to change the setting `max.poll.interval.ms` (default 300000) to its double in order to tell Kafka a consumer should be considered dead if the consumer only if it hasn't called the `.poll()` method in 10 minutes instead of 5.

#### NEW QUESTION # 64

(You deploy a Kafka Streams application with five application instances.

Kafka Streams stores application metadata using internal topics.

Auto-topic creation is disabled in the Kafka cluster.

Which statement about this scenario is true?)

- **A. The application will terminate with a non-retriable exception.**
- B. The application will continue to work and internal topics will be created, even if auto-topic creation is disabled.
- C. The application will be on hold until internal topics are created manually.
- D. The application will work, but application metadata will not be stored.

**Answer: A**

Explanation:

According to the official Apache Kafka Streams documentation, Kafka Streams relies on internal topics (such as changelog topics and repartition topics) to store state, task assignments, and application metadata. These topics are essential for fault tolerance, rebalancing, and state recovery.

When auto-topic creation is disabled, Kafka Streams cannot automatically create the required internal topics unless they already exist. In this situation, the Streams application will fail during startup with a fatal, non-retriable exception, indicating that the necessary internal topics could not be created.

Kafka Streams does not pause or wait for manual topic creation, nor does it operate without storing metadata.

Instead, it explicitly requires these topics to exist or be creatable. While administrators can manually pre-create the required internal topics with the correct configuration, failure to do so causes the application to terminate.

Therefore, the correct and documented behavior is that the Kafka Streams application terminates with a non-retriable exception when auto-topic creation is disabled and required internal topics are missing.

## NEW QUESTION # 65

.....

ExamcollectionPass is here to help you to make your CCDAK certification dream true by providing the best valid and latest exam Confluent CCDAK study reference. If you still have doubt about our CCDAK exam dumps. Please pay attention to our CCDAK free demo on the product page. You can download the free demo and have a try. Then I believe you can make the decision. Generally, there are explanations along with the questions, which will make you learn more about the knowledge about CCDAK Actual Test. Please prepare well with the CCDAK study material we provide for you. We guarantee you can pass the CCDAK actual test with a high score.
