Upgrade C_ACDET_2506 Dumps, New C_ACDET_2506 Test Pattern

In order to survive better in society, we must understand the requirements of society for us. In addition to theoretical knowledge, we need more practical skills. After we use C_ACDET_2506 practice guide, we can get the certification faster, which will greatly improve our competitiveness. Of course, your gain is definitely not just the C_ACDET_2506 certificate. Our C_ACDET_2506 study materials will change your working style and lifestyle. You will work more efficiently than others. Our C_ACDET_2506 training materials can play such a big role.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q16-Q21):

NEW QUESTION # 16

During verification in Production, a stakeholder reports that the imported form template appears outdated. What could be a likely reason for this?

- A. The Test site template was not the latest version when exported.

- B. The Production site is missing certain parameter settings.
- C. The system automatically reverted the template to a previous version during import.
- D. The Production site does not support custom form templates.

Answer: A

Explanation:

If an imported form template appears outdated in Production, the most common cause is that the version exported from Test was not the latest published version. SAP Ariba's export/import process is version- specific; only the selected version at export time is moved. If the latest updates weren't published or exported, Production will receive an older version.

SAP does not auto-revert templates to previous versions during import, and missing parameter settings typically do not affect template versions. Production supports custom templates as long as metadata and versions align.

Proper version control, including publishing the latest template version in Test before export, is essential to avoid this issue.

NEW QUESTION # 17

Which read-only files show the key and English translations for custom field labels and helptips?

- A. The customerResource files that can be exported through ICM
- **B. The JSON files that can be exported through AML & Translations Upload**
- C. The JSON files that can be exported through ICM
- D. The customerResource files that can be exported through AML & Translations Upload

Answer: B

Explanation:

SAP Ariba stores translations for custom field labels and help tips in JSON files exported and imported via AML (Advanced Metadata List) & Translations Upload. These JSON files contain key-value pairs representing the translation keys and their English or localized strings. This mechanism supports language management and bulk updates of translated content.

ICM exports configuration bundles but does not handle translation files in JSON format. CustomerResource files are not the standard format for translation export/import.

Using AML & Translations Upload allows administrators to maintain and update translations across multiple languages efficiently, ensuring consistent user experience in multi-lingual deployments.

NEW QUESTION # 18

You have defined a custom field to have a default value based on another field. You have verified that the defaulting happens correctly the first time. However, when the dependent field changes value, your custom field does not change. What scenarios could cause this? (Select 3 correct answers)

- **A. The parameter Application.Base.RecomputeValueOnFieldChange is not enabled**
- B. The custom field has the property Lock Initial value enabled, which prohibits a field to be changed once it's set
- C. The defaulting Expression sets a value that violates the custom field Validity Condition
- **D. Your dependent field does not have the property Refresh screen on value change enabled**
- **E. Your custom field has the property Respect User Value enabled, and the user has manually entered another value into the field**

Answer: A,D,E

Explanation:

* B: If the dependent field isn't configured to refresh the UI when its value changes (no "Refresh screen on value change" enabled), the defaulting logic won't retrigger.

* C: The global parameter Application.Base.RecomputeValueOnFieldChange must be enabled so that dependent default expressions recalculate on field changes; otherwise, they won't update automatically.

* E: The "Respect User Value" property, when enabled, means that if a user manually overrides the default, the system will not recalculate or overwrite the field even if dependencies change. Lock Initial Value (A) prevents edits after first default but doesn't affect recomputation, and violating validity (D) would trigger an error, not silently block updates.

NEW QUESTION # 19

Users are able to publish a contract workspace without populating the Supplier field.

What action can be performed on the Supplier field to force population before publishing?

- A. Configure a visibility condition
- **B. Enable Require value before publish**
- C. Enable Required
- D. Configure a validity condition

Answer: B

NEW QUESTION # 20

Which SAP Ariba solutions are included in SAP Ariba Strategic Sourcing Suite? Note: There are 2 correct answers to this question.

- **A. SAP Ariba Category Management**
- B. SAP Ariba Supplier Lifecycle and Performance
- C. SAP Ariba Buying and Invoicing
- **D. SAP Ariba Contracts**

Answer: A,D

NEW QUESTION # 21
