A completed Digital Discovery Assessment is a comprehensive evaluation conducted during the planning stages of an SAP S/4HANA Cloud Public Edition implementation. This assessment captures various critical aspects of the project to ensure a tailored and efficient approach. Two key elements captured in this assessment are 'Known integration requirements' and 'Business role requirements'. Understanding the integration requirements is essential for ensuring seamless connectivity and data flow between SAP S/4HANA Cloud and other systems. Identifying business role requirements is crucial for aligning the system's capabilities with the specific needs and responsibilities of different user groups within the organization. Both elements are pivotal for designing a solution that is both integrated and user-centric.

What are some characteristics of the SAP S/4HANA Migration Cockpit? Note: There are 2 correct answers to this question.

- A. Mapping source values to SAP S/4HANA target values
- B. Extensibility using the Legacy System Migration Workbench
- C. Combining the local and remote schema approaches into one migration project
- D. Guidance and simulation of the migration process

**Answer: A,D**

Explanation:

The SAP S/4HANA Migration Cockpit is a tool that facilitates the transfer of business data from a source system to SAP S/4HANA. It uses migration objects to identify and transfer the relevant data for a specific business object. The SAP S/4HANA Migration Cockpit has the following characteristics1:

\* It allows mapping source values to SAP S/4HANA target values, as well as converting values that are migrated from source fields to target fields. This ensures data consistency and quality in the target system.

\* It provides guidance and simulation of the migration process, as well as error handling and monitoring.

This helps to reduce the complexity and risk of data migration, and to ensure a smooth and successful data transfer.

\* It does not support extensibility using the Legacy System Migration Workbench (LSMW), which is a tool for data migration from legacy systems to SAP systems. The SAP S/4HANA Migration Cockpit has its own extensibility framework, the SAP S/4HANA Migration Object Modeler, which allows creating and enhancing migration objects2.

\* It does not combine the local and remote schema approaches into one migration project. The SAP S/4HANA Migration Cockpit offers three options for transferring data to SAP S/4HANA: using files, using staging tables, or using direct transfer from an SAP system1. Each option requires a separate migration project and has its own advantages and limitations3.
