Huawei H11-861_V4.0 考試大綱：

主題	簡介

主題 1	• Technical Concepts: This section measures skills of Industrial IoT Engineers and Network Engineers and covers fundamental technical principles relevant to Industrial Internet of Things (IIoT), including architectures, protocols, data management, and integration technologies.
主題 2	• Integration and Application: This section targets Solution Developers and System Integrators involved in integrating IIoT systems with existing enterprise applications, cloud platforms, and analytics tools for data-driven decision making.
主題 3	• Cybersecurity and Risk Management: This section assesses the expertise of Security Engineers and Compliance Officers in securing IIoT environments by applying security frameworks, identity and access management, threat detection, and risk mitigation strategies.
主題 4	• Implementation and Configuration: This domain targets IIoT Solution Architects and System Integrators, focusing on configuring IoT devices, network connectivity, communication protocols, and edge computing components used in IIoT deployments.
主題 5	• Operations and Maintenance: This domain measures skills of Operations Engineers and Network Administrators in monitoring IIoT systems, troubleshooting network and device issues, and maintaining overall system health and performance.

最新的 HCIP-Video Conference H11-861_V4.0 免費考試真題 (Q43-Q48):

問題 #43

The Call priority protocol on the Box 310 endpoint is set to SIP by default.

- A. FALSE
- B. TRUE

答案: A

問題 #44

Assume endpoints T1 and T2 are registered with the same SC node zone. After T1 calls the number of T2 using H.323, T1 and T2 communicate with each other. Which of the following statements are true about the call process? (Choose all that apply.)

- A. In this process, the H.225 RAS signaling interaction between T1 and T2 must pass through the SC.
- B. Endpoint control signaling involved in this process mainly includes H.225 RAS, H.225 Call Signaling, and H.245.
- C. In this process, the media stream must be directly transmitted between T1 and T2.
- D. 225 RAS messages (registration, admission, status) always traverse the SC (gatekeeper) for endpoints in the same zone.
- E. In this process, the H.225 call signaling interaction between T1 and T2 must pass through the SC.

答案: A,B,C

解題說明:

RTP media is exchanged directly between T1 and T2 once the call is established.

The call control sequence involves H.225 RAS (registration/admission), H.225 call signaling (SETUP/CONNECT), and H.245 control for capabilities.

問題 #45

Assume endpoints T1 and T2 are registered with the same SC node zone (signaling routing is enabled on the SC). After T1 calls the number of T2 using H.323, T1 communicates with T2. How many TCP connections are established in this process?

- A. 0
- B. 1
- C. 2
- D. 3

答案： B

解題說明：

With signaling routing enabled on the SC, both the H.225 call signaling and the H.245 control channel are each split into two TCP legs (T1→SC and SC→T2), resulting in $2 \times 2 = 4$ TCP connections.

問題 #46

Which of the following conference parameters need to be obtained by engineers when locating conference faults on the SMC video conferencing system? (Choose all that apply.)

- A. Conference type
- B. Conference video protocol
- C. Conference bandwidth
- D. Conference resolution and frame rate

答案： A,B,C,D

解題說明：

When troubleshooting conferences, engineers must know the video protocol in use, the conference type, the resolution and frame rate being delivered, and the bandwidth allocation - each of these parameters directly impacts session behavior and helps pinpoint faults.

問題 #47

Assume the SMC system administrator wants to remotely log in to the SC in SSH mode. Which of the following is the default port for the admin user to log in to the SC?

- A. 0
- B. 1
- C. 2
- D. 3

答案： B

解題說明：

SSH uses port 22 by default for secure CLI access to the SC admin account.
