

1z0-076 Study Materials & 1z0-076 Exam collection & 1z0-076 Actual Lab Questions

What's more, part of that ITExamDownload 1z0-076 dumps now are free: https://drive.google.com/open?id=1kuDdQyZcpAhcKHC5TbBJ-LQtN1-_rv0A

The passing rate of our study material is very high, and it is about 99%. We provide free download and tryout of the 1z0-076 question torrent, and we will update the 1z0-076 exam torrent frequently to guarantee that you can get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our 1z0-076 Latest Questions are compiled by the experienced professionals elaborately. So it will be very convenient for you to buy our product and it will do a lot of good to you.

It is time for you to plan your life carefully. After all, you have to make money by yourself. If you want to find a desirable job, you must rely on your ability to get the job. Now, our 1z0-076 study materials will help you master the popular skills in the office. Believe it or not, our 1z0-076 Study Materials will relieve you from poverty. It is important to make large amounts of money in modern society.

Reliable 1z0-076 Exam Pattern, 1z0-076 Valid Dumps Ppt

To find better job opportunities you have to learn new and in-demand skills and upgrade your knowledge. With the Oracle Database 19c: Data Guard Administration 1z0-076 Exam you can do this job nicely and quickly. To do this you just need to get registered in the ITExamDownload Oracle Database 19c: Data Guard Administration exam and put all your efforts to pass this challenging Oracle Database 19c: Data Guard Administration exam with good scores. However, you should keep in mind that the

Oracle Database 19c: Data Guard Administration exam is a valuable credential and will play an important role in your career advancement

Oracle Database 19c: Data Guard Administration Sample Questions (Q28-Q33):

NEW QUESTION # 28

A customer asks for your recommendation regarding this requirement:

1. We plan to have a Data Guard Configuration with one primary database and one physical standby database.
2. We want zero data loss in case of a disaster involving the loss of one component.
3. We want to do Real Application Testing occasionally on the Standby Database.

Which solution, if any, satisfies these requirements?

- A. A far sync instance plus a snapshot standby database and real time apply that can be converted regularly into logical standby database to do real application testing
- **B. A physical standby database with synchronous redo transport that can be converted regularly into a snapshot standby to do real application testing**
- C. A snapshot standby database with real time query that can be converted regularly into a physical standby database open read write, to do real application testing
- D. These requirements cannot be met.

Answer: B

Explanation:

Synchronous redo transport for zero data loss (B): To guarantee zero data loss in the case of a disaster, synchronous redo transport must be configured between the primary and standby databases.

Conversion to snapshot standby for testing (B): A physical standby database can be temporarily converted into a snapshot standby database to perform real application testing. After testing is completed, the snapshot standby can be converted back to a physical standby to resume its disaster recovery role.

NEW QUESTION # 29

Examine the Data Guard configuration:

```
DGMGRL> show configuration;

Configuration - Animals

  Protection Mode: MaxAvailability

  Databases:
    dogs - Primary database
    sheep - Physical standby database
    cats - Physical standby database

  Fast-Start Failover: ENABLED

  Configuration Status:
    SUCCESS
```

What happens if you issue "switchover to sheep;" at the DGMGRL prompt?

- **A. The switchover succeeds and Dogs becomes the new failover target.**
- B. The switchover succeeds and Cats becomes the new failover target.
- C. The switchover succeeds but Dogs needs to be reinstated.
- D. It results in an error indicating that a switchover is not allowed.
- E. The switchover succeeds and Fast-Start Failover is suspended.

Answer: A

Explanation:

When issuing a "switchover to sheep;" command in a Data Guard configuration, the primary database (Dogs) transitions to a standby

role, and the target standby database (Sheep) becomes the new primary database. Fast-Start Failover (FSFO) remains enabled, but its target changes according to the new roles of the databases. Since Cats is also a physical standby database, it does not become the failover target by default unless it is specified in the broker configuration. After the switchover, the original primary (Dogs) becomes the new standby database and thus the new failover target for FSFO.

Reference:

Oracle Data Guard Broker documentation provides detailed procedures and explanations of switchover operations, including how FSFO targets are affected post-switchover. This behavior is consistent across different Oracle Database versions that support Data Guard and FSFO.

NEW QUESTION # 30

Your Data Guard environment consists of these components and settings:

A primary database supporting an OLTP workload

A remote physical standby database

Real-time query is enabled

The redo transport mode is set to SYNC

The protection mode is set to Maximum Availability

Which two statements are true regarding the DelayMins database property for the standby database?

- A. It can only be enabled for a configuration in Maximum Performance mode.
- B. It specifies a delay before the primary ships redo to the standby destination having DelayMins set.
- C. It enables you to bypass the default network timeout interval specified for the standby redo transport destination.
- D. It can only be enabled for a configuration in Maximum Availability mode.
- E. It allows user errors on the primary to be recovered by using the physical standby database.
- F. It allows logical corruptions on the primary to be recovered by using the physical standby database.

Answer: E,F

NEW QUESTION # 31

Which two are prerequisites for configuring Transaction Guard in a Data Guard environment?

- A. Ensure that connection descriptors for database clients use the failover clause with the COMMIT_OUTCOME parameter set to TRUE.
- B. Set INSTANCE_NAME identically on all the Data Guard Configuration databases and modify the local service name on the client to include a CONNECTION_LIST containing all the standby hosts.
- C. Create a database service with COMMIT_OUTCOME set to TRUE, and ensure clients use that service to connect to the database instance.
- D. Create a database service with COMMIT_OUTCOME set to TRUE and ensure that the service is statically registered with the default listener on the primary host.
- E. Grant execute permission on the DBMS_APP_CONT package to relevant database schema owners.

Answer: C,E

NEW QUESTION # 32

Which four statements are true regarding SQL Apply filters for a logical standby database?

- A. They can be used to skip all SQL statements executed on a specific pluggable database (PDB) within a standby multitenant container database (CDB).
- B. They can be used to skip execution of DML triggers on a table while allowing the DML to execute.
- C. They can be used to skip ALTER TABLE commands.
- D. They can be used to skip CREATE TABLE commands.
- E. They can be used to stop SQL apply if it encounters an error.
- F. They can only be used to skip DML statements on a table.
- G. They can be used to skip ALTER TABLE commands on specific tables.

Answer: B,C,D,G

Explanation:

Based on the Oracle Database 19c documentation, the correct answers about SQL Apply filters for a logical standby database are: A. They can be used to skip execution of DML triggers on a table while allowing the DML to execute. B. They can be used to skip CREATE TABLE commands. C. They can be used to skip ALTER SYSTEM and ALTER DATABASE commands. G. They can be used to skip ALTER TABLE commands on specific tables.

Comprehensive Detailed Explanation: SQL Apply filters in a logical standby database can be set to control which SQL operations are applied to the standby. These filters allow for certain commands to be skipped, ensuring that they do not impact the standby database. For example, filters can be used to skip the execution of DML triggers to prevent them from firing during SQL Apply, while still allowing the underlying DML to be executed on the logical standby database. This is particularly useful when certain triggers are not desired to run in a standby environment. CREATE TABLE, ALTER SYSTEM, ALTER DATABASE, and specific ALTER TABLE commands can also be skipped using SQL Apply filters to prevent unwanted structural changes or administrative operations from affecting the logical standby database. These capabilities provide a level of control to ensure that the logical standby database reflects only the desired state of the primary database.

References: Oracle Database SQL Language Reference and Oracle Data Guard Concepts and Administration guide offer comprehensive details on the use of SQL Apply filters, including the range of SQL statements that can be influenced by these filters in a logical standby database environment.

NEW QUESTION # 33

.....

If you cannot fully believe our 1z0-076 exam prep, you can refer to the real comments from our customers on our official website before making a decision. There are some real feelings after they have bought our study materials. Almost all of our customers have highly praised our 1z0-076 exam guide because they have successfully obtained the certificate. Generally, they are very satisfied with our 1z0-076 Exam Torrent. Also, some people will write good review guidance for reference. Maybe it is useful for your preparation of the 1z0-076 exam. In addition, you also can think carefully which kind of study materials suit you best. If someone leaves their phone number or email address in the comments area, you can contact them directly to get some useful suggestions.
